whenever I do to one the yahoo.video or google.video sites that are linked here all I get is the quicktime logo with a question mark instead of seeing the videro

Any ideas what I'm doing wrong?

Have the latest and greatest version installed.

DonDon... are you using firefox? I'll betcha you wouldn't get that message with IE. I have used firefox for quite a few years dealing with issues as you stated... and I finally quite using it. There are others that claim it is the best thing since peanut butter, but I refuse to accept that. It has more bugs than a Louisiana summer night... as far as I am concerned... Just my opinion. Anyway, I did finally get quicktime to work in firefox, but I honestly don't remember what I changed in the settings... Sorry I can't be more help.. perhaps someone else knows what to change....

>In the older Yamaha gear, there were several Bi-Polar electrolytics in
the audio path that should be replaced regardless. This will improve
the low end response dramatically. They are usually located just
before the buffer amps. Look for "BP" on the case... and replace with
as close a value as you can find. If you can't find Bi-Polar caps,
you can make them out of two standard electrolytics back to back (the
caps will have to have double the value you want to end up with).

I currently have 8 EDS cards, 4 MECs, 4 C16s, 7 Analog Input cards, 4 Analog output cards and 7 ADAT cards running under XP. At one point during testing, I hooked up 6 loaded MECs and dropped 96 tracks in simultaneous Record. I would bet 96 tracks in Record is a record for a DAW (no pun intended).

I wish I could tell you why it seems to like me so well, but I don't know. Other than making sure you are patched correctly in the Paris patchbay and making sure the correct Input card is selected in the 2nd MEC's "MEC Modules" block, I would expect it to be a Word Clock issue.

You are using WC, right? Besides the "UseHouseSync=1" line, you MUST create a "Default Project" in your Paris Pro folder, and the "Default Project" MUST be set to Word Clock sync and it MUST be set to a 48K sample rate. Even if you have your Word Clock generator set to 44.1K and are going to work at 44.1K, the Paris Default Project MUST be set to 48K in the Project Window when Paris boots up. After bootup, you can change it to read 44.1K with no problems. This one nearly killed me and Chris Thoman till we caught it.

Do this. Patch some Paris audio on your 2nd EDS card (B) to play out of MEC 2. As in, in the Paris patchbay, patch Mixer 2 stereo outs to the MEC 2 headphone outputs, for instance. Make sure the stereo meters on Mixer 2 are showing audio. If you hear audio, the MEC and WC is fine, and you have a Patchbay issue, some bad hardware, or some peculiarity of Paris on XP that is unknown.

But my bet is that you will not hear audio play back out of MEC 2. If that's the case, then you have a Word Clock issue that is either in the Paris.cfg file, or the Default Project. As soon as you hear audio playback, your inputs will work. Patience, Spockish logic and staying methodical is your best bet.

Regards,
Brian T

careful dude.....I'm thinking about getting two Opcode Studio 64XTC's, a

second Paris system and a 16 track 2". I'm gonna stripe a track on the tape with smpte, sync one of the paris systems to the smpte stripe via the XTC while regenerating the smpte with the XTC and sending it to the XTC on the other Paris system which will then be slaved and will simultaneously send ADAT sync out to my native DAW. this way I can control my entire studio from a tape transport

What the hell does the government have to do with whether or not a body-piercing chain in another country fires someone, or an electronics retailer here can't compete because they choose to operate out of 1,500 square foot storefronts when all their competitors are running big-box 50,000 square-foot establishments with a wider selection of products?

NeilCuz we want a new government. Ask us what time it is and we'll answer "We need a new government" ! Sign me up !

Seriously, it;s been a while, but If I recall, pretty much plug her in, the
bitch it the VST wrapper thing...some one here will guide you through it,
(not me of course)
I use FXpanstion 3,3 ...but I think Dimitrios found a better alternative.(Chainer
maybe) you will also need sampleslide. and a few numbers to remember.

Somewhat unfortunately, I've got some serious tidying up of drum tracks to do. It's driving me nuts! (Anyone who wants an edit job / drummers with studios looking to record could try propositioning me!).

I've got drums recorded across 12 channels, but much of the playing needs "quantising", ideally around a groove (i.e. the groove when he gets it right; or just reprogramming it from scratch). I'm a bit clueless when it comes to the possibilities offered in cubase / recycle, but presumable this would be the way forward, rather than trying to do it all by hand in Paris. Problem with recycle, as far as I understand it, it that it works on mono, maybe even stereo, files, but not 12 at once.

Hot tips greatly appreciated.

Thanks,

You are correct about Recycle, it will not work across 12 tracks. I suggest you move the wave files to Pro Tools and do this with Beat Detective (not the LE version which only works on two tracks.) You should be able to find many Pro Tools users who will take this on.

It is much easier if it was recorded to a grid. Saying you want to quantize to section of the song he did well, will only work if the tempo is exactly the same throughout the track. This is unlikely if his playing was that sloppy. Beat Detective will allow you to extract an averaged tempo map out of the performance and quantize to that, but it may still speed up and slow down.

the groove on top of the generated tempo map.

If its just a matter of a few late kick or snare hits, I would do it in Paris, but be sure to cut and move all 12 tracks simultaneously. If you need do advanced surgery, Beat Detective is the best tool for the job. genealso, that way when it pisses you off you can just shove it down the hill
