128k is probably enough. For personal listening I usually use 192 or 256,  
but on a PA 128 would do, assuming your encoder is good.

That said there is the occasional audio file with odd phase stuff going on  
which doesn't convert well.

Also, if your PA is mono, a mono MP3 at the same bitrate will likely improve  
quality.

Cheers,  
Kim.

Hi Rod,

I can get those clicks and inconsistant playback over some edits with a UAD rev 4.7 too. It can be the case over other plugins too.

I'm using a Radeon 9600 dual head now.

It is fine in all other ways though. I think it's a Paris/UAD thing.=20

I had been using a Matrox G550 and before that a G400.

All exhibit the same behavior give or take.

Do you ever get clicks or dropouts when the a UAD plug goes over an =  
edit?

What mobo are you using? I don't get distortion, but I'm just =  
wondering if  
the things I DO exp
