>Sarah Exactly "what" do you need the amplification for, besides
your voice? By what, I mean which instruments will need to go through it.
What instruments will be in the band totally.

tic due to the overconfidence of a foolish
captain. It strikes against all that a captain's responsibility entails,
namely the security of the vessel and crew/passengers. I just can't find
the romance in it.

A wonderful bit of history is the story of Leif Ericson's successful
adventure sailing across the same N. Atlantic to North America with
nothing but the planets and stars as guidance, 500 hundred years before

Columbus "discovered" it. Moral of the story: hire a Norwegian crew.
<http://www.mnc.net/norway/ericson.htm>

e have that, better grouping,
we have that, more stable under XP, we sure have that, better looks ?, we
have that too, more plugins of uad1 quality but not that much of latency
(remember 16384 samples !!!) now with creamware cards less than 80 samples
normally at 19 samples !!
Even withn that latency vertex can compensate.
VERTEX can

(859) 635-5762So you are saying it os not possible in Cubase SX3 to have realtime effects
monitoring????

Thats INSANE!!

It isnt really neccessary, but it sure is fun.

I take it that this was replaced by dsp effects right?

You can can still do this with DSP effects?

Hmm.

Oh Well.

thx

b

>(859) 635-5762Error type 12 is a Mac problem, but what is up with the looping deal.
It doesn't do it in every song just this one. I hit loo
