project just once, the =
latencies were
all off. There are a bunch of UADs in use. It had played well in the =
past.

So I switched to my cloned C drive and the latencies were off there
too. ? . Does the UAD need a setting changed?

I reloaded the UAD 4.3 drivers (original latency I've been using) and =
now=20

I have all these plugins at Paris boot that can't be found, most of =
which=20

are ones I don't have authorizations for but not all. I never had to =
click=20

those away before.

I hadn't made any changes except the hardware wordclock to 48k
for this project. When it made it into the
