pocket to upgrade my NFR copy to a standard copy and it took hours and hours to get things straightened out. Talk about friendly fire.

I haven't ever used, much less owned, most of the obscure gear the LM models, so I can't say anything about their accuracy, I just think it sounds great. Other things in its favor.T

- The hardware dongle (i.e. the FW box) is a hardware dongle, but at least it gives me some meters and knobs in exchange while the UAD just takes up a PCI slot and give me nothing else.

- It's a tweaker's dream with the EQ. I have a few EQs set up with H/L pass filters (which I use a lot) from I think the Neve emulation and then two parametric filters from one of the squishy vintage sounding tube EQ things. I think it's the Massive Passive emulation.

- 32 channels with a teensy CPU hit, so for comparatively large track count things like the Monkeys it's a godsend

Downsides

- Slows down exports/bounces to real time because it has to feed the signals through the hardware dongle. Minor annoyance but at the end of a mix session I got spoiled using the export mix option in SX.

user, and it keeps warez channel distribution from waaaay down to non
existant. Waves... not so much, 'eh?
I do wish that they would cough up a good IEEE1394 'dongle' though, or allow
more native power to be usable instead of making us all buy an expansion
chassis and more cards to fit the max of cards.
AA

Only the TDM version. Which is probably why they stop TDM support? :)

>Hey Mike.

That drum plate algo is really cool.

I used it on a mix yesterday, and it really did come up with
the goods with just a tweak of the decay and pre delay.

You are spot on about the white noise thing.

Adds a nice sizzle to snare.

Great for vocals, too.

Thanks!

>ain't all it's cracked up to be.Hi all

I have an opportunity to pick up a couple of UAD 1e express cards loaded with a wack of additional plugs for an extremely good price...not a "too good to be true" price but a really good price.

I was planning to put these two cards into a second machine which will also house my Frontier Designs Dakota card which I use to link up with my Paris rig.

Now as these UAD cards are PCIe and my Dakota is PCI mt question is are there motherboards out there that have both types of slots and does anyone have any recommendations for which to buy.

Of course the other option is to put these UAD cards in a magma expansion chassis and run them off my Paris rig. PCI to PCIe if I'm not mistaken.

There are pros and con's to each scenario but as I'm looking to eventually migrate away from Paris in the future putting the UAD cards in their own smoking machine seems to be the way to go.

Anyway any thoughts on this would be really appreciatedHow bout a DP2?

>Yeah baby!

DCAwesome Mike...! Thanks...

TDYeah, it really is. I've been doing more and more test mixes with the LM and the main problem I seem to have is confusion with all of the different models. So, I settled on 3-4 EQs and 3-4 comps that I use all the time unless something just isn't happening. So my 'go-to' EQ is the Massive Passive model (pretty in your face, but it works with the Monx) and the default comp model is the one from the Neve VR. Those I know well, 2-3 others I know OK, and I go fishing for special f/x if necessary.

It's lots 'o fun,

Smith Micro has partnered with Laplink Software to present THE NEW PC ULTIMATE
VALUE BUNDLE

Easily move from your old PC to a new PC!

PCmover is the only migration utility that moves all your selected programs,
files, and settings from your old PC to your new PC.

Three great products for one great price!

For a limited time, you can get PCmover, PCsync, and a genuine Laplink USB
Cable for only \$39.99, a total savings of \$90! It's the ONLY set of tools

You could copy the inf, and system32 to the new machine, select the right
hal, ntoskrnl, and ntkrlnpa, install your apps fresh and you have a brand
new, clean computer with a nice clean registry and \$40 you can use to buy
a bottle of Cliquot to celebrate.

>If it sounds good in Paris, it sounds good all over the world. Try
burning with windows media player or itunes or the like. Nowadays you
don't really need to use a burning program with all the features
available in the itunes/rhapsody world. In windows a right click on the
file allows you to add album, artist, etc. data to the properties.

Outstanding!

Shining Hobo Rocket is ready for prime time and my favorite new song this year!

El Miguel (...heading for the skies, finally found a home)Ah, you're too kind. I'll send you a copy of the CD when it's finally done.

I think the hobos need to take something up with their travel agent. Originally the planet they're going to is made of pecan pie, but when they get there it's actually made of styrofoam. Seems like a raw deal to me, but then again I'm not a hobo.

GoranI was waiting for that one. I figured you would be the one to serve it up.

;-)
