hich , to me makes the mix sound well. I like good distortion. A little  
>dirt is good for a mix in that genre.

Hey I'm not dissing the mix, I really like that Anberlin mix,  
too - it's great work & has got some cool stuff going on - all  
I'm sayin' is that for my personal taste I don't like the  
distortion in it. It's almost like if you were to plunk an  
exciter across a mix & just set it on "max" lol but it's  
not as smooth as an exciter either, ya know?

Anyway - my sonic nirvana - yeah, I may have found it. Super-  
competitive volume AND clarity too!

NeillInquiring minds wanna know... what's your typical track count and dB  
settings?

tered by one  
of the preeminent hi-volume mastering dudes, the other is just  
a final mix that hasn't been mastered, the final - yet  
unmastered - mix is just as loud, if not louder, AND it's  
cleaner.

How is that not a good comparison? Sorry I didn't think of  
asking the label to release me all the raw tracks from that

song so that I could do my own mix of it in order to convince you.

Other people here seem to get it. I don't think you do.

Neil"John" <no@no.com> wrote:

Izotope Ozone followed by Voxengo Elephant on the 2-buss. Elephant is capable of processing internally at up to four times the samplerate (or 2x in my case, since i'm at 88.2k), and I think that's part of what's enabling me to get those few extra db without sacrificing clarity.

I also think that recording at 88.2k makes a difference from the get-go, but I'm not in the mood to argue that point again. The results are in, though, and I think the combination works.

NeilNeil, your mix doesn't come close to the depth, thickness or balance of the other one. It's apples and oranges. I do think it's great that you found something you're diggin on though.

again - respect,  
-Carl

They liked the first version before the RMS/PRMS boost just fine, but they like this one even better (of course, why wouldn't they - it's LOUDER! lol).

NeilBoth actually.. what do your tracks typically sit at, what level do you track at and what's the buss sitting at during a mix. Wait, that's 3 innit :)

>Both actually.. what do your tracks typically sit at,

My default project template has all the channel faders set at -6db, I find that's a good starting point. When I add channels for OD's & whatnot, I also start them out at -6. Obviously by that point the rest of channels are all over the place, as I kind of work the mix as I go along.

>what level do you track at

Somewhat hot - I mean I try to use every possible bit, but I also don't care all that much if a track's waveform ends up peaking at -2 as opposed to right at zero. Also, I don't normalize tracks if they're not peaking right at zero - that's just another step of processing that I don't think benefits anything & just adds another type of conve

Rob,  
That mix gelled perfectly. I am usually amazed by the talent within this group. Your work was no exception. The vocal=20 blend was very nice in relation to the bed.  
What did you use to get the fiddle so phat?

I have no idea what they were singing about though . . .

-----=\_NextPart\_000\_00C0\_01C7F0E8.F3683440--When you give a client a bunch of rough mixes and he/she thinks they sound so good that they must be almost done (like, maybe only another 15 or 20 minutes of work, 30 tops) but you haven't done ANY of the things that you know need to be done to a good sounding finished mix, like using some nice sounding plugins, setting up some automation to keep voices and solos on top of the music and maybe even (God forbid!!!) tuning a note here and there. And then they find out that the GOOD mixes take an hour or two or even three, never mind the big production numbers that eat up 8 or 9 hours of editing and mixing time and STILL need some tweaking to be "just right".

Most of my clients sweat at least a little blood for every dollar they pay me. I have to try to strike a ballance between what I want and what they need. I had one project where I just gave up on doing all my fancy mix tricks. I slapped my UAD-1 plugs and my Waves plugs on a few tunes and he came back saying "I like the rough mixes better".

So... What do you do?

Can Win XP handle 750GB?

Thanks,

Deejill run cubase sx 3 first (mac version) only because it came with mac deal..when I boot over to the xp..i'll run nuendo 3, PT M powered.

Very nice machine..I have 3 500 gig seagates in it along with 4 gigs of ram.

I really can't wait to see this new 'ogic app coming..

>I've got a bunch of IDE drives here that I would like to be able to put in a case attached to one of my comps via USB and be able to access the data on the drives. I won't be recording to it, just archiving. Having 3 or 4 separate drives in bays would be a plus as well.

Any suggestions for a good unit?

Thanks,

One multiprocessor Mac with as much RAM as you need would be simpler to manage.

Cheers,

-Jamie

Marketing to one market doesn't exclude the other, so it can't be a  
legitimately serious put down of the Mac, as you say. Clearly Apple is  
also marketing decent products to professional media folks at the same  
time, and have been for years.

There are a couple of web sites that regularly review the hardware specs and performance.

Beyond just the pile of components and the case they come in, the elegance of the OS matters to some folks. So whether the whole package is worth it or not is a judgment call.

Things I think about include the total system abilities and speed, the elegance of integration between apps, the amount of time it does (or doesn't) take to keep the system running, the useful life of the system, and the overall reliability over that life. Time is money, so initial cost is just one consideration (not an unimportant consideration, but not the only consideration).

Based on their own considerations, different people with different experiences and expectations choose different systems, which helps keep the market at least somewhat vibrant given the few choices remaining.

-----=\_NextPart\_000\_00BF\_01C7F28B.55D0C630--The other day UA pinged me with a bunch of  
bonus coupons. It just so  
happened that it was enough for me to buy the Roland Space Echo and Boss CE1  
chorus pedal emulator....so rather than die, I went ahead and got them. The  
Space Echo is very cool. I'd forgotten how much vibe that thing has, but the  
coolest discovery was the CE1 chorus pedal. I've got some mixes here with a  
lot of mandolin in them. I've had to use quite a bit of subtractive EQ on  
the instruments in these mixes to cut the mud and they were sounding a bit  
thin and brittle. A good way to get the "thick" back in a mandolin while  
still cutting some of the midrange is to use the Boss CE1 on it. Same goes  
for the Roland Dimension D on acoustic guitars. It plumps up the signal  
nicely while being very unobtrusive if used as a send effect and still  
allows some space in the mix for other instruments.

OK..that's all.

;o)Whose birthday? It's my birthday, too, yeah. No, really. Well, yesterday  
it was, since it's technically the ninth now. I'm old. And I did spend  
money. Heh.

I need the sound of a subway arriving and the doors opening and a laugh track i.e. laughter recorded in a small comedy club

Any help would be appreciated as the internot is coming up short right now

Thanks

DonHI Lamont,

They are only developing a MY -MADI option card to make it easier to connect to a RME card. They are not developing a PC sound card.

Audio Service is the company that make the MY-MADI currently and they are charging over \$3000 for it. I tis cheaper and more flexible to get a RME MADI card and the RME ADI-648 and them use the MY-ADAT cards in the console.

Egg-zactly.

Nice, innit?

Neill've played with the idea of something like this on and off for a year now.  
Surely they have a USB model.

Deej, you should definitely try that (free) TubeDriver plugin I posted a link to last week - not for the drive, just for the harmonics - that'll also thicken up that mando without having to resort to pitch-shifting stuff like chorii.

NeilHi Lamont,

Yes the DM2000 does sound great. The way the Yamaha studio Manager software works inside of Cubase/Nuendo is awesome. Why easier than using its built-in screen to do stuff.

I think DJ might have some issues with using the DM2000 as compared to his Houston mainly because some of the extra belles and whistles that I've only seen the Mackie and Houston do.

But otherwise I think the DM would be a breath of fresh air for him.
