Just had a chance to check out the Mike Ofca links.

I have to say that while the tune isn't really my favorite genre,
I thought both mixes sounded pretty damn good!!

Especially liked the Satriani inspired movie thing in the studio.

Again , I can't thank all of you guys who have chimed in enough for all of
your input.

Thanks,
Jon

Hmmm... I agree with the sound thing, but I am
tired of PARIS crashing and all the little workarounds.
I just want to turn it on and go.
It kills the vibe for me.
If I sold all me PARIS gear I could get two Motu8pres and a Hammerfall
interface.
Use Cubase SX and be done with it.
I love PARIS ..I just need to get the vibe back and fun back in the process.
To much technical crap gets in the way of that.

I just dont know how I would monitor with the setup I just described.

IS there a cheap conversion box that takes adat and converts it to +4db XLR
for monitoring?

en sum to Paris
in "live" mode.... it can't crash if it's just sitting there

summing.

NeilJust finished rendering everything. I'm getting ready to pull the plug on this system. I never thought I could get so attached to a bunch of electronics in a bunch of boxes and some 1's and 0's.....(sigh)....well, here goes.....

You guys who have bought components and other stuff in my rack can expect to hear from me shortly once I get things boxed up.

;o)

>Brandon - any D/A interface with balanced outs and +4/-10 level select will run

power monitors, or to an amp. I made my own balanced 1/4" to XLRs using Canare cable and Neutrik connectors.

I'm running my 5.1 rig off of my Fireface, balanced 1/4 to XLR, +4dBu - works great and sounds great.
(The Fireface has -10/+4/Higain settings for outs and ins).

I have Totalmix setup with calibrated reference levels for recall there; and with Cubase 4/Nuendo's control room you can control your listening level with a midi controller or something like faderport and not affect the main mix bus (still meter and bounce unaffected).

You can also always add, or use a passive volume control in this config.

Regards,
Dedric

Here is a way too cool tool for quick bounces "within" Cubase or Paris..So
you can do these quick track bounces into a folder, then call up ..Say Paris
to Mix in..
Only \$19.00 bucks..Check it out..

<http://www.silverspike.com/?Products:Tapelt>

This is a must have for those of use who work in multiple DAWs.

admitted we were powerless over multiple DAWs and that our lives had become unmanageable.

2. Came to believe that a Power greater than Paris could restore us to sanity.
3. Made a decision to turn our MECs away and give our lives over to the a new DAW Cubase 4.
4. Made a searching and fearless moral inventory of ridiculous hardware inventory I had accumulated.
5. Admitted to the Paris group, to ourselves, and to another human being (DJ's wife) the exact nature of our insane purchases.
6. Were entirely ready to have Cubase remove all these defects of Paris.
7. Humbly asked Cubase to remove our shortcomings.
8. Made a list of all projects we had harmed, and became willing to make amends to them all.
9. Made direct amends to such projects wherever possible, except when to do so would introduce dither or jitter.
10. Continued to take personal inventory and when we were wrong promptly sell more shit.
11. Sought through prayer and meditation to improve our conscious contact with Cubase by reading the manual.
12. Having had a spiritual awakening as the result of Cubase 4, we tried to carry this message to other Parisites, and to practice these principles in all our jam sessions.

Drink up !!!> 11. Sought through prayer and meditation to improve

shouldn't this be "sought through prayer and *medication*.....yadda yadda....?"

- >Hi chris,

I figured to just run at 88.2. I liked Neil's clips. I would just set the project to 88.2 and use the ADI8-DD's on the outboard gear I've got here to upsample it to be compatible with 88.2. It's only 48k capable, max.

Any real performance increases as to latency with the MADI vs the HDSP PCI cards?

Thanks,

Deej

I'm not really sure. They were all developed 100% on XP. The only thing
I can think of is that you have an older version (ie bought it the second
it came out :-). You can always go to www.greatidea.com/downloads to pick
up the version that works for everyone else (hahaha).

Right? Those Orientals, well, they're good at copying, but that's all. Right?
All the good ideas come from here where, you know, Europeans live. Those
other people just rip off our good ideas and make them cheaper.

```

Dedric, you're a good guy, I know that from all of the posts I've seen from you here. But there are incredibly brilliant coders in China and India right now trying to make a living doing what they love. Some of them will do audio DSP. Dismissing them out of hand, simply because they are from China, well, it's repellant.

>Thad - you missed my follow up post where I retracted this comment, but that was too late anyway.

You are right, my joke wasn't funny, or even a joke - it was supposed to be a take off on the whole C1 vs. U87 "debate" that rooted itself in the pro audio community for several years, not a slight on the developers or the Chinese in general. I apologize.

There's nothing wrong with these plugins - they aren't superb, but the developer is on the right track and I hope he keeps going strong with these, eventually making money off of them, competing with the best of them. Other than some issues with the limiters, they are better than most freeware plugins.

I tried all of them just to give them a chance - good ideas there. Yes, you are right, and even the whole "Chinese mic" stereotype is ill-conceived and unfair.

I changed the subject to keep from propagating the poor analogy.

Regards,
Dedric

because of my day job I see the spectacular dedication and quality that Chinese
and Indian programmers have. It's awe inspiring, to be honest. I apologize
if my reponse was a bit harsh. Let's call it quits and be open to some really
exciting coding talent that might come from unexpected places.

>Neil,

I've been running my system in an "off the rack" Gateway 3Ghz box for
about a year and a half. Haven't had the hours in that time that a lot
of you get but it has been rock solid steady since I moved all EDS cards
into the Magma.

Absolutely - hardware development included.

Regards,

Dedric
