I've been very happy with
mine.http://apnews.excite.com/article/20080609/D916M2RG1.htmlThese are actually really nice
monitors... very bright. We are using one

of the 24's on the MacPro for remote ProTools stuff. Considering two of the 26" for main viewing.

It's good to be getting down to mixing time at long last . . .

arrangement/production standpoint, on "Ports and Borders" my first impression was that there are a couple of golden opportunities to add intensity and a strong narrative curve to the arrangement with a relief/texture change. I'll just throw out some things that might have occurred to me to mess with - maybe [depending on bleed issues] dropping the kit down to kick only (or snare only) or even killing the drums for 4 or 8 in a strategic location and letting those great guitar parts carry it, bringing the drums back in on the eight-note builds (depending on how adventurous the client lets you be and what market you're after, maybe squish the heck out of 'em and crud 'em up with a filter and fade 'em back up). Those "chime guitars" are a great little African hint, btw.

I almost heard the intro as being just the snare build from Bar 3 (maybe just beats 3 & 4) copied back over bars 1 & 2 so it's an insane three-bar build. And when it gets to the 4 bars before the vocals come in, over the G - Gsus build, I thought of breaking it down - maybe by killing everything but kick and snare and bringing 'em back in with the vox. That's the sort

>Thanks Kerry, I'll forward your suggestions on to Nick. I tend to be a little more 'aggressive' at mixdown with those sort of rethinks than the other two guys. But they're not my songs so I can get fancy ideas.

Thanks for the compliments on the guitars. Ports and Borders is almost all Nick, using a Fender Jaguar and my strat sometimes, I think, and a Bassman or Top Hat depending. Hobo Rocket is almost all me, using mostly my LP and Savage. The feedback in the intro is all LP + Savage, and was a TON of fun to do.

When I have more complete, proper mixes I'll let

we go.

Very nice that a piece of Computer gear has a lifetime warranty, and I get an upgrade for free 5 years later.

TedWhat do you guys think of this?

<http://www.musicfirstcoalition.org/#/home/>

Cheers,
-Jamie
www.JamieKrutz.comI'm not sure I understand.

In the itemized list in the patch bay on the right hand side, I only see "Modules A" which only shows 16 ins and 16 outs.

Do you mean to say that each MEC can only run up to two input and output modules? If that's the case, then why in the world does the MEC have 9 expansion slots? Am I going to have to run a whole extra 4-rack-unit MEC just to use my extra modules? Or is there a more efficient workaround that I don't know about here? Or am I misunderstanding this completely?

Somebody help explain this to me.

At the same time? Yes.

Or is there a more efficient workaround that I don't know
> about here? Or am I misunderstanding this completely?

Best workaround is to store patches as presets
in the patchbay.
