Use Faderworks and you'll never think numbers again.
Best thing we have going and it's a single click for all effects
being compensated for. I'll send you my preset for 44.1
which covers all the UAD and many others including Paris.
You'll have to buy Faderworks though.
http://www.vertexdsp.com/products_faderworks.html

> chrisl@adkproaudio.comHi All,

As far as I can tell, the motherboard chip-set does not matter for PARIS, but it does matter for expansion boxes.

I did a bios update on my PC about two weeks ago, and I noticed that I was getting audio crackles on certain projects that used a lot of UAD plugins in PARIS. Flashing the bios back to the earlier version didn't fix the problem. If I take my two PARIS cards out of my old Magma expansion chassis and place them right on the motherboard, everything works perfectly. But, not in the chassis.

So, I decided to order the Virtua Via expansion chassis to see if that fixed my chassis issues in my AMD chip-set based computer. It didn't.

I've been running on an AMD 790G based computer. Here's how it does with the expansion chassis post bios update.

PARIS in the 32 bit Magma chassis with AMD chipset: 20 tracks before crackles.
PARIS in the Virtua Via chassis with AMD chipset: 7 tracks before crackles.

Here's how the Virtua

Via did in a Nvidia based motherboard (ASUS M2MPV-VM): 32 tracks and no crackles whatsoever.

I'll be replacing my AMD chipset based motherboard with an Nvidia based motherboard as soon as I can afford to.

I just thought I should let everybody know what I've found out.

All the best,

Mike I feel we all need to stick to Intel type chipsets these days with audio and video DAWs.

The Intel chips are really kicking but...and they just work.

from what i gather most people are using the asus p5k mobos

I'd like to try paris out, and have a hackintosh.

What do you think the chances are of having Paris working on an asus p5k?

About how much would it cost to put together a Paris rig?

I have no current Paris gear, nor do I have a computer that can run Paris.

I'm looking for a breakdown in cost like for the best paris rig i.e fastest cpu/mobo/ram that has been known to be rock solid, magma chasis prices?, current prices for paris gear i.e mec, inputs, adat, c16, edc?

I'm looking to have 32 inputs and would kinda like to know what budget I would need.Why wouldn't it work?

You'd just be using Paris in it's native windows mode on a native windows computer.

Or are you asking if you can run it in virtualisation mode ala Parallels or Vmware through the Mac interface?

> My new rig which is built around the Asus P5B MB and P965 chip set came in
at just over \$700 CAD

this rig has 4 gigs of ram, an Intel E9400 processor, two 500 gig HDD (one hot swappable) a 160 gig system drive and is housed in a 4 unit rack case.

The reason I went this route is we were going to live dangerously and try and install 2 -EDS cards and 2 - UAD-1e cards on the Motherboard and it looks like we succeeded.

I haven't done much on the rig yet but so far it's been solid as a rock.

As for Paris component prices the EDS cards are running \$150 USD, an ADAT card is still pushing \$200 USD, a MEC is around \$75 USD and a C16 is roughly \$50 USD

Hope that helps

I though people had only got some mobos with specific chipsets to work?

Or is a Paris rig with multiple eds cards and uad cards stable with any mobo? What about with a magma chasis attached?

Eds cards are for PCI slots right?

I'd like to build a hackintosh rig using am asus pk5 mobo to run osx but also to use xp running Paris in xp (no paralells or vmware)Check the FS board:

My AKG K240 has been a decent sounding and reasonably comfortable headset for general studio use. Pretty good for mixing, but definitely check with speakers whenever you're trying to mix with headphones. It's never the same.

Cheers,

now they've flagged you for sure..

the google monster..

I remember when google was cool.. now it's like big brother.

Cheers,

TC
