>Can those of you who have been using the RNP's for a while give me some opinions?
I am in the process of deciding on some new Pre amps.
THinking of one Funkenwerks or GR 1NV and I may get a couple RNP's while
I am at it. I am wondering how they do for overheads.

Tanxl am building a computer for a friend who's going to be using cubase. I'm
using a Gigabyte K8ns Ultra 939 on Chris Ludwig's recommendation. I've got
everything going on the basic build and done several stress tests. Everything
looks good and there were no problems except a bad removable rack tray that
I spent several hours chasing down :(Havn't installed cubase yet. I'm going
to try Paris and see how that goes. I've already ghosted so it's play time
:-)

I'll post on the results. Kim, how's your experience going?
One thing I noticed on some benchmark tests (HD tack) is the MSI neo-platinum
looks to be a bit faster on the benchmarks, given the same memory, cpu, and
drives.

If I remember right. Chris L. also recommended that mobo.

I'll post after I try the Paris thing.

RodFunny, way back I was thinking of calling my studio "the Sand Box"thinking
of Mr Wilson

Do you have anything to do with BRMC?

How are the IRQ's hard wired to the PCI slots in the bios? Are any PCI slots always sharing with the AGP?

Does the bios of this mobo support dual core processors?

Thanks,

Mr. Simplicity

>Hmmmmm.....Just wondering what the difference between an Opteron and a
64 CPU is. Why would an Opteron rig be faster?

does this have more to do with the mobo architecture.....like having
multiple busses, or what? I see that rigs like Brian T's monster wusing the
Tyan mobo has lots of busses.

The K8NS looks like a real moster with 2 x SATA controllers and at least one
of the SATA controllers is a Silicone Image (this is good).....so Mr.
Simplicity is starting to think about being able to put together something
that can run Cubase SX pretty much full time at 1.5ms latency with VSTi's
running along in the background so he goes to NewEgg and starts looking at

these K8NS mobos and at 64 bit x 2 CPU's ranging anywhere from an AMD 64 x 2 3800 for \$352.96, to an AMD 64 x 2 4600 Manchester for \$690.00 to an AMD 64 x 2 Toledo for \$884.00. All of them appear to have 1G L2 cache and the cheapest one is 2 GHz which I am assuming means 2GHz x 2 or 4Ghz and the most expensive one is 2.4GHz so I'm assuming that this means it's possible of achieving around 5GHz if nudged a little.

So what's the diff between an unnamed 3800, a Manchester and a Toledo. Does this have something to do wi

Yes it does in the later versions. Mind you I can't get my system to work with the later versions, so...

Cheers,

Kim."erlilo" <erlilo@online.no> wrote:

That's cheap enough if it works, and there's a trial version, so that's the next thing on my list to try. Thanks heaps.

Cheers,

Kim.EK Sound <spamnot.info@eksoundNO.com> wrote:

>But then you have to get off the chair.... oh no... exercise!!! ;-)

It's not the getting off the chair that bothers me, it's the purchase of 6 individual hard drives for the six boots. ;o)

Cheers,
Kim.HI DJ,

DJ wrote:

> Hmmmmm.....Just wondering what the difference between an Opteron and a

The CPU benchmark on the equivalent speed AMD64 and OPteron chips are very close with the AMD 64 being very slightly higher.

This doesn't mean that the AMD 64 is necessarily faster over all.

The has better PCI bus and memory performance than any architecture out there. This will only be noticeable though with high track count high sample rate recording and intensive VSTi use that is sample based.

UADs and TC powercore work great in either setup. The only issue is with the UAD on the AMD64 X2 is you have a firewire audio interface. UAD is already working on this (we sent them a machine).

If you want to get something that is gonna the most future proof (if there is such a thing) then the Tyan s2895 with the Opterons would be the best choice. But also the most expensive at the start.

The K8NS like all of the Nforce 3 chipset motherboards are on the way to being phased out. The Nforce 4 single CPU board are having performance issues with PCI. They will hopefully be changing this with some chipset changes soon.

If your money is tight then the AMD64 X2 single processor will still be the best choice for performance.

Best price/performance:

AMD Athlon64-
3500+
4000+
X2-
3800+
4400+

Opteron-

242 (1.6)
248 (2.2)

OPteron Dual-Core-

265 (1.8)
275 (2.2)

(859) 635-5762HI Rod,

Good to here everything is working so far. I know Kim seemed to have some growing pains.

The better HDTach performance usually means that the drive controller is

probably using more PCI than it should to show better benchmarks. I always put the SATA drives on the NVidia SATA controller which is technically off the PCI buss on the Gigabyte board.

Chris

They are several notches better than Mackie, though, and they are an amazing value. We don't track many instruments at a time around here, but if we did the RNP would get a lot more use, whereas now we just use the Great River on everything, with uniformly excellent results.

YOMV.

I've got my eye on one of those TAB units as a companion to my 1NV. I've always wanted some really creamy preamp action...

version 6. Kind of weird.
I couldn't find any documentation that mentioned compabiliyt with dual core
CPU's, but I guess Kim did (in later versions...see his post below)
So far, I havn't been able to get Paris to work with it though.
No errors...it just won't do ANYTHING when I try to open paris.
I only tried late last night though, so it could have been a bad on my part.
I'll try again, and post the relults.

I was checking into this on the Nuendo forum last night and saw Brian T's posting about his rigs. I'm gonna have to find me a sugar daddy.

;o)

Thanks for sending them a machine since I am using 2 x HDSP 9652's a PCI
Multiface and a UAD-1 in my Magma and 3 x UAD1-s in PCI #'s 3, 4 and 5.
Looks like I'd be SOL right about now. Guess I'll wait to see if this gets
sorted out. Is Joe Bryan carrying the ball on this for UA? If so, I have
high hopes. That guy is amazing.

:o)

NO F7 and higher only.

I don't think Paris will work right anyways because of the dual
processor functions.

Hehe, well... ;o)

1 Boot just for Paris... so it's clean and always works.

1 Boot for general audio, with Paris and every other audio application I use.

1 Boot for video production use. This will also have some audio apps, as well as video production apps.

1 Boot for general office tasks... word processing, photoshop etc.

1 Boot called "KAOS" for general mucking around. This is the anything goes install where you load things to see if they work etc.

1 Boot for experimental OS's... where I can load Linux if I want, or new versions of Windows / Service packs... whatever.

You see this computer will do pretty much everything for me, and we all know how a system runs if you load a million things on a single install of Windows. OK, I could probably make do with maybe only about 4, or 3 even in a pinch, but I certainly wouldn't want to be routinely running Paris off an OS with video stuff, M\$ office, Cubase, Reason, etc etc. I like to keep things clean...

....I am astounded how difficult it seems to be to get such a system running though.

Cheers,

Kim. Yeah, I was thinking of the RNP as sort of a stop gap set for say OH's in addition to a GR NV1 if they were really good. I am thinking that a v72 racked is not much more than the Tab- funken, so I think I'll wait on that. Of course a 1073 is a shite load more than the GR. So I'll go with that for now I think. Of course I have just become greedy and I am now leaning towards sabing for a pre that starts with an "H"..but I wont mention.

Paris works perfectly for me on my XP 2800/ASUS A7V8X. This rig is beacoup
stable with plenty of horsepower for Paris. I doubt I'll ever build another
Paris DAW.

>Well, I got the Gigabyte K8NS with an amd64 3500 cpu going with Paris. I got 6 eds (in a 13 slot magma) and 2 native submixes filled (32 tracks in record at a time)for a total of 128 tracks, doing some silly stuff like moving windows, open and close windows, open paint and draw a nice picture, save it and open it, all while playing the 128 tracks. I didn't bother with any plugs, but I'd say this set up is at least pretty stable with Paris. After I did this, I noticed that 4 of my eds cards were sharing an irq with the matrox 650.....so I'd say that was pretty good that it could do that much while sharing with the agp.

Thanks for all your info on these matters. On behalf of the penny pinchers in the world (me), what could you tell us about the performance of the Giga k8ns socket 754 version. With the 64-bit activated Semprons now under \$80.00 USD, it would provide an attractive alternative while \$taying out of the deep water\$ of cutting edge upgrades.

Regards,

EI Miguel
