> >>>>
> >>>>
> >>>>
> >>>>Hey Lamont,

My investigation isn't really about sound quality as much as performance, but if I can get midi/VSTi and score to picture capabilities in Samplitude *and* it sounds better, I wouldn't mind switching.

The point really is that Nuendo isn't performing as I would expect, esp. at low latency. Some Nuendo users think RME drivers are to blame, but my Samplitude tests tell me otherwise.

As far as the summing engine - both are 32-bit float all the way through, and that shouldn't have any affect on performance. I'll reserve judgement on the differences and whether that affects sound until I can test it out. Believe me, I'm not opposed to getting a better sounding app, but there is a lot to give up compared to Nuendo for scoring and composing - a lot (tempo map/warp - Samplitude isn't even in the ballpark here; only one controller draw tool in Sam - freehand; etc).

My guess is actually that the static engine (i.e. all plugins/dsp active all the time) has built a basis that in order to implement PDC, Nuendo became much more resource intensive than it otherwise needed to be. That's a guess at best, but for sure since 3.0 it has become sluggish in areas I wouldn't expect, with unpredictable high load behavior (which has actually been in the audio engine since SX 1.0). Samplitude 8.11 demo has some serious bugs (crashes if I record enable one midi track before the other has completely disabled, for one), but is much snappier in response. Some workflow issues still bother me, but others are nice. Actually I like the midi editor slightly better than Nuendo's (other than missing a lot of features) - it's a quick workflow with a few cool tool/modifiers Nuendo doesn't have, or at least I haven't setup as a key command.

Do you have N3.2 on PC, and would you be interested in giving the test a quick spin? If this bears out the way I think it might, I'll write a report to send to Steinberg and RME and let them sort/fight it out, or more likely, ignore it. ;-)

Regards,
Dedric

>I agree with you..it's not RME and it's drivers. I have an Digi 96 PST card
and it's very fast on Samplitude,Gigastudio, and others..

To me and other SX users, things got slow and the sound changed when we update
to 3.x

Let's face it, SX/Nuendo has a lot of over-head in the app..You can almost
feel it. it's a very powerful app. Samplitude on the other hand is a hybrid
vst app. it's always been sleek and fast. When customers demanded vst integration,
vst was an addon, not a total "infusion" that samplitude fully depends on.

Anyway, to my ears Samplitude is the best sounding DAW/editor on the market.
I master with it exclusively. That's not saying anything bad about SX/Nuendo..

Cheers,

Kim.Thanks Don.

I don't think we have Tripp-Lite units over here, but we're getting close to being able to afford one of these:

http://www.apc.com/resource/include/techspec_index.cfm?base_sku=BR1500I

I think the server only uses about 100watts, or not even, so this should give us around 50 minutes of backup time or probably more. Complete with AVR and the rest...

You're not the only person who's recommended APC...

Cheers,
Kim.
