>As you all probably know, Im the one that loaded XP on my computer a couple of weeks ago and so far all Hell has broken loose. I follow the instructions "exactly" but maybe im still doing something wrong. I am not a computer person. Every time I exit Paris I get a Paris.exe error and my screen locks up on me. Someone help me walk through this and I will pay you. As you can probably tell I am very frustrated at this point.

Thanks in advance

Ken!m sure other DVD drives will work. Apple just won't support the Mac anymore if we put anything else in (but we don't have Applecare, so no big deal there).

As far as mpeg2 video, I don't know that you would want to edit mp2. DVD mpeg2 is highly compressed and won't re-render or recompress well. If capturing from a DV/HDV camera, it may be an m2t stream, which also won't edit well (interleaved frames).

Regard
