I loved that box too.

Little known fact:

The DMX (and DX) had each sound burned to a PROM chip and after it was out for a few months a small company started that offered alternate samples available on chips the user could swap (I think they also offer Linndrum chips). I picked up some of the chips offered. The company went on to become Digidesign.

The DMX came with a killer snare sample.

Speaking of EPROM drum sample chips, ever use the Wendel Jr.?
Those worked pretty well, actually!

Neilor tied doing another mix down and see if that dupes it?
try doing a strip header thing?

>Sarah,.....did you.....

Import the individual .paf's into a stereo file in WL (go to
File>Open>Wave>file type>Ensoniq PAF then shift+right click on each one and
then click on open?

At this point, the L & R mono files whould open as a stereo PAF in Wavelab.

Then did you process/dither the files using the render function and save
them as a separate file? did they play back OK? Then did you set a directory
path to save this as a 16bit/44.1kHz .wav file? Did it still play back OK?

Next, did you go to File>Save Special (wave)>Encode MP3>Save as Type>MPEG-1
Layer3 (MP3) and below this there should be an active bar that should say :
MP3/Stereo/44.100Hz/LameEric-128Kbs/Attr

Then you name the file and directory pach and hit OK. this works for me
every time.

I'll be out for a few hours. I'll check back in later on. If you're still
having trouble PM me a animix-at-animas-dot-net and I'll try to help you get
this going.

Regards,

Deej

Way back when he used to call me once a month or so (who would have thought),
in the first days of the NG...

We were talking about oberheim stuff, and I was recalling how much I liked
this oberheim drum machine I used to use 'back in the 80s' because it was
so easy to program, had decent sounds for electronic music and 8 outs. He
said, yeah it's a DMX, I have one if you want it. I never took him up on
it. Lo and behold there it is on the equipment list.

Since I feel like saturation/clipping has more to do with bigger mixes (obviously a big selling point in paris with its ability to crank levels) this is one area I've been concentrating on more than summing issues.

There is a modular synth addon for SCOPE called Adern Flexor. Included in it is about 5-6 saturation modules:

[http://adern.com/manuals/flexor/reference/shapers/saturation /soft_sat.htm](http://adern.com/manuals/flexor/reference/shapers/saturation/soft_sat.htm)

My idea is to strap these across multiple channels in SCOPE while streaming

my mix from a native app through them.

I'll be doing some tests and let you guys know how they come out.

you, since I don't hear a lot of modular synths in bluegrass tunes ;-)
Anyway, from what I've heard of your mixes you're looking, if anything, for greater
clarity not better fuzziness.

I've spent most of the past three days spending my free time with this stuff.
It's far more intuitive working in non-XTC mode than I thought (esp with
the nView stuff so I can have one screen for Scope, one for Live, and one
for other stuff), and I haven't even read the manuals yet, though I'm about
to start. And the Bowen synths, omigod omigod omigod, I'm really mad at myself
I didn't do this sooner.

Are you using the 'fancier' mixers with the f/x and EQs and such? Or are you still working mostly with this stuff as a better RME card?

>Hey guys, as pricing for EDS cards have dropped, I've purchased a couple more
to add to my 3 card system. Typically, I keep one as a back up, but I wanted
to know if there were any problems adding a fourth and possibly the fifth
to my 8 channel Avid extender.

I spoke with Gene and recall him mentioning that there might be a problem
going beyond 3 cards (Gene, was that within the PC?).

Before purchasing the extender, my Win98 PC worked with the 3 cards installed
and I put in the fourth to test and it worked, though I only tested it for
a short period.

I recall reading posts of larger systems, but can't recall the details.

Thanks,

Tyrone I've got 4 in a magma with no issues on WinXP. I seem to remember someone having some issue with the avid box/drivers though.

Yup, this NG was a really odd (in a good way) place a long, long time ago.
You're talking about even before I was involved, but I think I got a taste.
I post a question, lil' ol' me, and get an answer from SSC and/or Edmund,
and then Jason Miles tells what and idiot I am and how many Grammy winning
records he's worked on. Lotta fun, them days.

That's the standard method for rendering and dithering in Wavelab, if you're
a total control freak and want to make sure you don't end up saving your
file to a temp directory that you'll never find again.

i'd hate to be behind you at a ball game
> bathroom line and have 6 beers in me...ohhhhh lordy...

I'd prolly hurry it up. I'm not too sure I'd feel very good about having you
squirming around behind me squeezin' your lizard in a bathroom.

;o)

;o)Well, I tried 192 instead of the usual 128 and got the same debris. Didn't
try any other rates.

creating optimized audio file headers on wave files? I think it's a form for
extra non audio informations. But Paris hate to import wave files with
these kind of things, so there is a little program that can strip this
header things. You can do this thing inside Wavelab too, I think it's in the
Option/Preferences/File folder.

Good luck

DJ,

The adern modules are a 3rd party add on for the SCOPE modular system. so
they wont be there in a synth pack.

<http://www.planetz.com/forums/viewtopic.php?t=21138&highlight=ecc83>

<http://www.planetz.com/forums/viewtopic.php?t=21014&highlight=ecc83>

Those two are free though. I've already experimented with the ECC83 and
its nice for smoothing out transients on a mix.

JesseHi if you have seen my posts for ecc83 I have noted that used subtly can make
a great smoothing tube /tape effect.

I asked for a special version with no knobs just this subtle effect that
tubes introduce when driven moderately and he will be making this so stay
tuned !

In the meanwhile try the free ecc83 with my suggested setting at pulsar forum.

Regards,
Dimitrios

Dimitros yes I saw your post, need to read it again.

I am having some trouble just getting unit gain from this. I send it signal with no tube knobs up and the level is reduced. It seems about 8-10db of output gain is needed to adjust this.

It also seems like processing is applied even with the knobs all the way down.

that being said I like what I hear so far, subtly increasing the drive and the transients get softly rounded yet not muffled.

Sarah,

And the problem is?

It's an mp3. Sounds okay unless the hat was supposed to be more straight than it sounded on 3+.

Try burning a disc and listen on another system to see if it still sucks. =20

It sounded okay here. Nifty actually!

T.

5 drum mic kits on sale. CAD, Audio Technica, Shure, etc..
All for under \$200. I was very tempted to get one.
I was like the ...the Beta52A was \$170 by itself...Hmmm... I could get the
entire kit dor that much...,but they were lower grade mics and I wanted good
quality so I passed.
If I had another \$200 to spend I would have got one of them.
Anyway Strait Music at 620 and 183...if you guys want to give 'em a call.

>Hello people... the C -16 was working well when I first got it.. didn't
use it for a while.. reconnected it again.. it lit all leds and did nothing..
didn't move or function at all.. then it stopped the Paris from working
so I had to reinstall the Paris Pro 3 ... then reconnecting the C-16 no
leds even lit anymore.. did it fry ? any suggestions ?

Thanks alot in advance..

p.s : I am using aABIT AV8 3Rd eye MOBO with an Athlon AMD +3500 64
bit Processor with 4 EDS-1000 cards (working on SBS Chassis expansion)
and MEC (Black)Ok... I have been over thinking rock n' roll lately.

What I am thinking is....

If it takes roughly 28 feet for a 40hz wave form to develop
does that mean that that is the optimal distance for micing that frequency?
I figure only about 440hz and higher develop fully within 4 feet of the kick
drum.

So if i remember correctly a 60hz frequency will go thru one cylce at approximately
20-30ms into the kick sound.

So I was wondering if shifting the lower frequencies back towards the beginning
of kick beat by approximately 20-30ms if that would give a more powerful
kick sound/tone.

Make sense?

Anyway I will be trying it.

Wonder if the same will help bass guitar or any instrument.

Perhaps I ned to just go to sleep.

B <http://video.yahoo.com/video/play?oid=911d85ea5c7e3032&url=video.yahoo.com&fr=yvmtf>

Don't forget to think about proximity effect in this equation. I do
encourage you to do experiments, keep going man. What you'll learn about
your mics, instruments and rooms will stay with you long after any recording
medium. Acoustic knowledge never goes out of style.

Duh? Why didn't I think of that?!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Damn you're good Dimitrios.
Tom

"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:45a0d36c\$1@linux...

I would like to post the alternative to bus compressing using Paris =
eds compressor.

I combined some users tips here...

You use aux 1 as a stereo feed to eds stereo compressor.

You use the aux as pre and mute every drumtrack.

Now using the aux pan pot you send the drumtracks to the stereo field =
as
needed.

You open a eds compressor with 1.20 ratio 8 (yes only 8) release =
attack about

12 o'clock predelay 3 (if you want you can nudge all drumtracks 3 ms =
to the
left) threshold -96 and output like 4-5 db.
Now these will be the compressed only drums.
Now on aux 2 stereo again pre again you use the same aux settings and =
you
put on aux 2 same eds compressor with same predelay BUT with no =
threshold
and no ratio as to have the dry only signal.
Thus with aux1 you control the compressed drummix only and with aux2 =
the
dry drums.
Happy new Year.
Dimitrios

-----=_NextPart_000_0014_01C7328C.299F3B60--I'll have to do some more experimenting, but I needed to get this to the band so they can start practicing, so I finally got a good mp3 by using the "variable rate" and "highest quality" settings. It's a bit larger file, but it sounds good. If you want to hear the whole demo, it's at <http://www.sarahtonin.com/playlist/Survival%20demo.m3u> The section after the second chorus will have some kind of solo, not sure what yet . . . violin? slide guitar? gritty blues harmonica? kazoo? I don't know . . .

>Hi,

The best so far settings for EDS compressor is by using a ratio from 1.10 to 1.30 the most with threshold full at -96 ! and release only 8 (yes 8) and attack can be configured along your needs of mild (in conjunction with the lower settings 1.10-1.15) or heavy compression up to 1.30 and lower attack. Use predelay at 3ms but if you want smack on drumhitting leave it at 0 !

Never worked this out.

If it IS possible, how the hell do you arm the master fared to record movements?

Thanks.

Kim W.i have my room mics set about 3.6' in in front of the kit and 4' off the floor using M/S encoding. the overheads are 5' off the floor, 6' apart and 4' back from the drummer. for a different vibe the room mics can be placed up to 15' away from the kit and the file is shifted to approximately the same time as the overheads to reduce some of the delay which mostly affects the kicks clarity.

>Both the Master, and submix faders (or fareds)can be automated from the C-16
(yes, in classic mode) by doing the usual stuff (turning on automation and
edit automation on the mixer, arming the C-16 by pressing the solo and mute
at the same time)AND
clicking (and holding)on the appropriate fader with the mouse.
Then use the fader on the C-16 for the moves.

If you put the C-16 in submix mode channels 1 thru 8 will control submix
1-8 and the master fader will control the Global master. When C-16 is in
normal mode the master fader controls whichever submix the C-16 is assigned
to.

>Kim W. Actually, when in submix mode, the submix faders can be selected with the
channel select buttons on the C-16. You only have to click on the master
fader, as there is no other way to select it.

Never mind.
I used my usual workaround. Lucky I found some more Blu-Tak!
I guess that's one way to mix an orchestra!

in 1997 the same day Princess Diana died. Skydiving may have been a factor
in his death, but it wasn't the cause of death. It's a long sad story, maybe
some day I'll post about it or throw up a web page. The following year a
bunch of his friends joined him when their King Air went down.

Still getting extraneous clicking noises. I am seriously bummed. I called
uaudio tech support got the same old line - "We don't support Paris any more.
We don't support Mac OS 9 any more.

Are any Mac Paris users running UAD-1 Powered Plugins v.3.9? Are you having problems?

Thanks!

Ganttl'm running paris 3.0 on a G4 Dual 867 with one UAD card
and UAD 3.8 software.No problems here.
Thanks Eugene

I'm running 4 x EDS cards in a 7 slot Avid branded Magma here. I got it from
Chris. I think you told me you got yours from Chris too. You should be good
to go.

Wont run in 98, but very promising for its sound.

<http://www.acusticaudio.com/>

Extended version due soon (not free).

GeneDid you read my 2nd post? Still don't understand??? If so, what specifically?

Sorry to take so long replying to this - I forgot which thread it was in!

I don't use bananas myself, but for 3.5mm, check out:

http://www.allelectronics.com/cgi-bin/category/117/Cables_-_3.5mm_Plugs.html

The CB-352 cables are good - 2' for .90 each, quantity 10-99...

Doug

<http://www.parisfaqs.com> Seems a little glitchy, and uses quite a bit of cpu, but it does sound quite good. Worth checking out and watching.

Dedric

This plugin is based on a different convolution technology called dynamic volterra kerneling. This form of dynamic convolution appears to not violate the current Sintefex patents used by Focusrite and Sintefex, but it offers the same kind of time variant realism.

The free plug includes very good sounding reverbs a very good compressor and an excellent phaser among others. It appears to be just scratching what this technology can do.

It is very CPU intensive.

GeneAnd you thought the iPod was only good for...

<http://playlistmag.com/news/2007/01/08/tunestudio/index.php>he actually survived albeit slightly altered from the experience and i declined to take my turn. (i was suppose to go next)

Sorry Rod, i'm sure I understand. Thanks, Rod.

You've saved me a fortune in Blu-Tak!

Now I'm gonna print out your instructions and stick 'em next
to my desk. (with blu-tak, of course!).

Cheers.

More to come! Looks like it does most of the things that my Blackberry 8700 does.

>>
>
>I am convinced now that the best working method for triggering drums and
making a great drum production is at least also the following:
I bought me Digisound drumtriggers for 15 euros 8 pieces.
I attached them on snare tom kick using doublesided adhesive tape and put
their output DIRECTLY to a SEPARATE Paris input module along with normal
recorded drums.
No preamp needed !!!
Just hook it unbalanced to Paris in and you get a healthy recorded sound
that sounds AWFUL but healthy enough to drive DRUMAGOG, yes that beauty plugin.

Amazing results no false triggering because you actually use the sound and not some fancy trigger to midi to sound thing...
Just tailor drumagog to trigger the right way.
By the way their snare is fabulous.
These triggers are touch sensitive so you record the actual drumming with volume variations.
The drumagog snare is multisampled (many many samples there) from very low hits to very loud.
Very very convincing...
So you record different tracks, kick snare toms and you put drumagog on every one with appropriate samples.
Use your drum overhead for some room ambience or you can use some good reverb for creating that.
You can also attach them to cymbals !!.
I am sure it will work just fine.
The hi-hat is a problem though so keep this live ! :)
You can keep all your cymbals live by the way ...
Perfect world we live in right?
Now I will not care if I will record that perfect snare that will not contain that hi-hat again in it...

Regards,
DimitriosI just finished attempting to go back to v.3.8 from v.3.9. I can't make it work. I uninstalled all the UAD-1 3.9 stuff and re-installed 3.8 and I get a message saying that there is a software mismatch and the plugins won't work. I spoke w/ Casey at Universal Audio, who was very nice and tried to be helpful, but in the end he couldn't figure it out either.

Have any Mac people gone from 3.9 back to 3.8?

I would think any piezo drum triggers would work for this scenario. I've been thinking about buying some mesh drum heads and using triggers with them like Dimitrios. This would get most of the actual drum sound out of the overheads. Check this link for some ideas.

<http://www.harmony-central.com/Drums/EDW/triggers.html>

>More to come!Hey Dimitrios,

Does Drumagog trigger live from mic inputs? That is, do you hear the drumagog samples as you play the kit?

Or is a post process plugin that you apply after you record the trigger signals? And then only hear the drumagog samples after you've recorded the trigger signals and then applied drumagog to them?

If drumagog plays in real time from the kit with no trigger-to-midi needed, I could play it at live shows directly from my ddrum triggers. Would that be possible?

Cheers,
-Jamie

(859) 635-5762Hi Gantt ,

I went from 3.9 back to 3.7 because it seems to
work more reliably. There is a UAD folder on
your boot drive, in the PARIS VST Folder and in system
folder-application support area.

hope that helps,

regards,

Mike

Chuck should chime in here shortly, but it was part of the XP upgrade
intallation package as part of the Studio Controll Library DLL if I remember
correctly. So it should be there if you're rumming 3.0 on XP

As for operation...pop it in an Aux as a wires out and in an EDS insert as a wires in...I have on occassion had problems sending a reverb across or losing the link but a reinstantiation of the plug in both the AUx and EDS insert seemed to sure that problem

DonHaving the drums in the overheads is usually crucial to my sounds... ymmv...

The new Apple TV and iPhone are featured.

<http://events.apple.com.edgesuite.net/j47d52oo/event/> I remember, in Nashville, back in the late 80's, that was a pretty big thing.

Seperate lines from peizo's just to trigger gates. pretty much zero crosstalk.

Dimitrios it's simple it's silly. The only problem is we can't automate
using this type of routing. Sometimes that's necessary.

 it uses around 50ms delay ...
 It has a live feature which sounds but in my system at least...
 Also I don't thjink Paris monitors VST/DX when recording.
 You have to have another audio card running VST for live

eks ago ;-)

PS In addition to the folders previously mentioned I forgot the preference folder and extension folder. In 9.2 all of that stuff needs to be ripped out manually and trashed before you do a clean install.

on a fast Mac. But if it
has an operating delay then you're right, it won't work for live
performance.

Cheers,

Once again, you are "drinking the Apple Kool-aid" from Mr Jobs.

The Iphone is cool, but not revolutionary. My Treo 700Wx (Windows) is just as cool and Superior AND is very compatible with my PC and all MS applications and other Windows apps.

apps, plus all my
open source office, web and email apps). Which means for those times
when I need a computer with me, I take my PowerBook.

When I need a camera, I want a real camera, currently a Canon digital SLR.

If I can get by with something small that I can type on, I use a Psion
PDA (like a mini-laptop). Also works as a voice recorder. Cool little
box but long discontinued.

I'm resisting the all-in-one device. What if it fails? That's a lot of
eggs in one basket. But I can see the appeal of the all-in-one if it
could really cover what I need. None of them quite do that now. None of
them.

But for people who have different needs, each of the clunky phones has
appealing features. And for those people, it's not a matter of koolaid,
it's a matter of using what works for them. What covers their needs.
Choice is good.

Cheers,
-Jamie

Another thing that would be waycool is if the XTC mode could work in parallel with the normal mode so that the Scope plugins could be used as inserts/send FX in the native environment while the Scope mixer was being used for routing/summing. Actually, I have only taken others' word that this can't be done so, having yet not tried to convolute and pervert the Scope environment, I'm still not convinced that I can't get this to happen somehow.

>Well, it is in my current set up also, but I was thinking in the mind set of
using Drumagog to replace the drums completely through triggers rather than
just augmenting them. I use Drumagog to "add" to my acoustic drum tracks all
the time, but sometimes I'd like to have totally synth or whacked out drum
kit sounds. I thought about using triggers and mesh heads on a second "el
cheapo" drum kit to get a poor man's Roland TD-20 if you will. I could never
go completely electronic with the drums. As good as some of the electronic
kits out there are, they still don't have all the nuances of real drums.

-----=_NextPart_000_0077_01C734B0.8D84FD60--Jamie,

Drumagog will trigger fine live. In "live" mode, Drumagog has almost zero latency, but the accuracy is lower as far as dynamic tracking. It tracks your playing just fine, but it won't be as accurate choosing which sample to play back. This sounds worse than it really is and I think it would work just fine for live triggering.

Here's what the Drumagog site says:

"Live Triggering Mode: This zero-latency mode is designed for use in a live Drumagog setup. For example, when using Drumagog as an insert on the main console in a live concert performance, or using Drumagog as a "drum brain" for drum trigger pads. However, it doesn't offer the same triggering quality as the other modes, and is only recommended for use in situations that demand zero latency."

>>Guys,

In contemplating bringing Paris into a studio that already has a PT rig hooked up to their Trident 80B, how would you swap the two systems (ie, what goes in goes out etc)?

I'm thinking something like:

(2) MEC

MEC A/D inputs fed from the console busses

MEC D/A outputs feeding console tape returns

In Paris, assign each track to its own insert output?

Thoughts? I just want a big tape deck that interfaces with the studio's in-place Cue8 system, talkback, dynamics, patchbay etc.

Sandy We used to do this when we had the MCI. I had a second set of Tüchel multipins for the console and swapped between the DTRS rack and Paris by moving the multi's around.

ound. If you have enough patch bay real estate, you could hook both up and patch between.

For I/O of Paris you can use either the inserts or Aux sends.

David.

I haven't done it but it seems like you should be able to leave Paris in
"record-ready" mode and monitor input when stopped and repro when playing
back.

Sandy

I dare you to enter the world of Vista. It will break you will DJ for
sure....:)

heres a tip: there is no possibility of install or running unsigned
drivers in vista with out using the f8 boot option and choosing the
special function to allow unsigned drivers. You have to do this every
time you boot the machine. There no way to have the machine both in that
state automatically. Oh and the windows drivers model has changed allot
from XP so don't expect the driver to be usable no matter what.

Vista 32 bit has absolutely no benefit for anyone compared to XP.

Chris Ludwig

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com

chrisl@adkproaudio.com You can use the post fade Aux sends for the outputs to the console... this allows you to use the inserts for processing, and fader automation in Paris on mix. Simply set all the Aux sends to external and patch "Send 1 left" to output 1, 'Send 1 right' to output 2 etc. You would have to use outboard effects, or switch back to ITB to mix using Paris FX. As far as monitoring goes, Paris behaves exactly like a tape machine would so no adjustment needed there.

David.

Man, that guy (Mr Jobs) does not quit with his BS.. Please Mr Jobs stop with
the propaganda.

Next week, if Apple comes out with a new version of Logic, they'll claim
to have Re-Invented the DAW..

-----=_NextPart_000_00D2_01C734E8.95A516F0--I've had a 64 bit version of Win XP for at least
a year sitting on my desk,
possibly longer. Vista is 64 bit. You can bet MacOS will have it soon if
they don't already (honestly, just haven't kept an eye on that as it is not
even close to affecting me in any way).
The problem I see is this: USB and FIREWIRE will end up dominating this,
simply because as I'm sure you've all noted, PCI slots are going
away/shrinking in number per motherboard. This is an even older issue with
Macs. It's coming guys, and IMO I don't think there is much we can do about
it.

AA
