It's the complete antithesis of bloatware - lean, fast and mean. It's so tightly coded that the installer's a mere 3.3 meg, and it installs nothing in your system - in fact it can be run from a USB key. It boots lightning fast and editing/mixing is a breeze.

I got turned on to it by my production partner last year. I was dubious at first - why would I be interested when I'm already running Logic 8? Well, after playing with the pre-beta (really an alpha) build for a while and virtually *never* having it crash (while Logic 8 crashes more often than the Jamaican Bobsled Team) I started looking at it more seriously.

It's the brainchild of Justin Frankel, the guy who wrote WinAmp and sold it later (his family walked out with somewhere in the hundred million range from that sale). Now that he was able to do anything he wanted, he set out to design the DAW that he wanted to use - an answer to the bloated, expensive and often unacceptably flaky offerings on the market.

The features are insane and the design philosophy is deep-rooted; it

represents a serious challenge to the status quo. Justin's stated that he wanted to make it open source but it was problematic because of the licensing requirements for technologies like ReWire etc, but he's done the next closest thing - he's opened the architecture and provided kits so developer/users can code their own "extensions". These are completely different beasts from "audio plugins" - with these extensions you can write your own support for an audio file format, or for a control surface (even a non-MIDI one). He's got the user community completely in a lather writing macros, skins, control surface support (one user's already got REAPER remote controlled from a Nintendo DS! <http://www.youtube.com/watch?v=eAvvl1U9K5E>), workflow automation...

It's the most exciting thing I've seen in conventional DAWs in a long time (s
