Alright, I figured some of it out & DeeJ helped me with the rest over the phone, as far as which modules to start off with & how the connections are made, etc.; BUT... Pulsar apparently doesn't have 88.2k as a samplerate option, so I can't use it on ANY of my projects! Now, it does have a "slave" option, and I could clock it in a couple of different ways, but IT DOESN'T HAVE A WORD CLOCK ON THE CARD!!! DeeJ said I would need the Pulsar "Sync Plate" for that... hmm... if DeeJ knew that, why didn't the guy who sold it to me, considering I went into explicit detail about what I was trying to accomplish and asked him if it would work with my setup?

Fuck.

Neil very creative in my opinion.... never seen anything quite like it. I really love Roxette..

FWIW, Lamont, I write product reviews for Audiomidi.com and use a PC for every review (including writing it). But I've been known to use a Mac to finish writing or editing it though....

I've read user reviews on Liquid Mix saying it isn't as good as UAD-1 quality, but for \$800 street, it's worth it for the flexibility.

I caught some of it while I was waiting for yet another
reconfiguration of my PC to happen - it's not bad, but what
makes you say "next level"? The graphics & stuff like that?

NeilTotally useless for what I wanted it to be able to do.

End of story.

NeilNeil,

Man, that's drag but without the sync plate, you will not be able to use it on the same machine as your Multiface cards. The only suggestion I have is to load the Pulsar into that other computer (it's got it's own DSP so CPU horsepower won't be an issue) and then stream the Cubase tracks over ADAT from the Multiface units on the native DAW and slave the Pulsar on the other DAW to ADAT sync from the Multiface units running at 88.2. With 16 ADAT inputs you would have 8 x channels at 88.2 summing via SMUX.. That would get you up and running until the sync plate arrived:

http://www.jrrshop.com/product_info.php?products_id=1562

Damn!!!.....sorry this ended up being such a clusterfuck.

> NeilHey Neil,

One other thing that I've just gotta say here since I referred you to the

person you bought this from is that after working with him pretty intensively over the last month, I feel I can vouch for his integrity. This guy knows his way around the studio and has gone above and beyond for me, taking calls from me at home on Sundays even and I really think something must have slipped between the cracks. I know how frustrating this stuff is. I've been dealing with the same kind of thing for over a year with my RME hardware and you and I have been friends here for years and I sorta' feel personally responsible for your woes right now, but certainly don't think for one second that Gary would intentionally misrepresent the system or it's capabilities to make a sale.

> NeilHey Dedric..What gives with thses Pompus ass Mac -only reviewers??

It's like they get a new product to review, yet the (Reviewer) drags out their old trusty G4 to review a product. !!

Then, the next sentence usually goes, "I think my old er G4 Dual 867 is not up to the task that this software is begging for"!! No Shit!!! Time after time, review after review..Are these pompus Mac only reviewers..

This does nothing fore the product being reviewed. Due to Mr Mac reviewer has think of some cretive way to test he product!!!

Then you see the disclaimer 'I think if I had a fast PC these problems would occured'!!@#\$

My Point:

If you are a reviewer for a pro audio magazine, you owe to your-self, the reader and the manufactuer to give this product is fairest shake..Most of those "less-than stellar Mac only reviews leaves the reader feeling like the product is less than advertised, when in fact, it was that MAc only reviewer..

If you are a reveiwer, you should have both:

-A current Mac & a current PC period!!..

Rant off ...)

Happy Thanksgiving

>Hi James..

1)the 5 instances came from a review I just read from Pro audio news . That reviewer had the Dual 867 G4. This negates the product claim of 'Taking the strain" off off the host cpu'.

That's the one of the reasons you want a 'DSP -Firewire" product.

My experience at GC was pretty cool wih Liquid Mix. I called up 18 on their Dual g5. That was all the song needed that I was tesing. I was impressed..However, i came away thinking and feeling that : I think a Dual G5 could render 18 native plugs anyway. I knwo a PC can runnng any DAW can.. So, why the need for the Dongle???

Hey, Neil, you can always get a Paris rig to mix on.. I still do.
My XP /Paris rig is so stable, and with the URS and Waves SSL plugins.. It's
mixing dream for ITBB mixing..

"Neil" <OIUOIU@OU.com> wrote:

>Neil"Aaron Allen" <know-spam@not_here.dude> wrote:

>Hassle factor, bad sounds, interface issues?

>Where's the beef bro?

Hassle factor had me pissed from the beginning, but ultimately it comes down to this:

1.) You can't use the Pulsar plugins in your Native app... this was one of two big things I wanted to do... take some load off my CPU resources. You have to route a particular channel through the Pulsar mixer to insert one of their DSP-powered plugins.

2.) It won't do 88.2k - at least not of its own volition. It has 44.1, 48, and 96... now it CAN be slaved, but will the slaving work at that samplerate? I dunno, because YOU NEED ANOTHER CARD in order to do this - the guy who sold it to me didn't tell me that I would need the Pulsar Sync Plate in order to do what I wanted to accomplish - and I was VERY explicit with him in terms of samplerates & everything, yet he assured me this would work. This was really the deal-breaker in my case... you guys using 44.1 or 48 all the time might be fine using this (or another Pulsar) card.

3.) Even the Professional card (the one with 14 DSP chips, which is the one I got) doesn't seem to have the DSP power to really "get there" for what I wanted... I played back an 88.2k project at the 96k samplerate just to see how the Pulsar EFX sounded & I set it up for summing through the big Pulsar mixer (which is, IIRC, 48 channels); after whipping out with one of the Pulsar Reverbs & a couple of their compressors, I got a prompt saying that I was out of DSP resources and would I like to go fuck off? (ok, not really - it asked me something else, which I don't recall right now, but it's pretty much the same end result: "Go fuck off, you can't add any more EFX!").

So, if I kept the Pulsar card I would have to either:

1.) Buy this Sync Plate thing... screw it - not interested in spending any more \$\$\$; especially since the guy told me this would work as-is.

2.) Downconvert everything to 44.1k... screw it, not even CLOSE to what I am trying to accomplish, plus if I wanted to do that I could just sum in Paris via analog & still be able to work the individual tracks at the higher 88.2k resolution in SX.

3.) Upconvert everything to 96k... virtually impossible at my track counts; for those of you who haven't messed with these higher sample rates, you should know that there is indeed a big difference in the amount of resources consumed by 40 tracks worth of 96k files vs 40 tracks worth of 88.2k - my computer will run 40+ tracks of 88.2k with a goodly amount of plugins... that many tracks of 96k & plugins = lockup city.

4.) Live with mixing in the Pulsar environment, since you can't insert their plugins in your Native app. Again, not what I wanted (and either was told it could do, or perhaps misunderstood - not sure about that particular aspect) in that regard. Irrespective of that, why do I want to do this? Why would I want to have to toggle back & forth all the time between the Pulsar & the SX environment?

So, there you have it in a nutshell.

Neill can't speak for SOS reviewers specifically, but I would say it really depends on what the reviewer has available. Remember "pros only use Macs" has been the mantra in this biz for a long time. Regardless, it isn't uncommon for a reviewer to be an average ordinary guy with a modest rig and only one good comp to choose from - or at least only time to test on one. I doubt they are being intentionally pompous or arrogant - just saying what they think is relevant (e.g. the SOS review you are referring to could be rephrased to read "my review is subjective since my comp isn't state of the art, so take this with a grain of salt").

To some degree reviews are designed to give people enough info to make their own decision and not unduly sway them with personal opinion, but you'll get both in different degrees depending on the writer's style. That said SOS reviews seem to me to throw in a bit more candor, but again, these are mostly average guys, not necessarily multi-platinum producers. If they were, I doubt they would either have the time or interest in writing reviews (some do - Mix and some feature articles in SOS, etc).

I guess that blows my cover as SuperMegaMusicMan...

Regards,
Clark Kent

uh...sorry..right..just me...

I Have a Paris rig again - I got it from John (not "J-Diddy",
the "other" John :D) I may just pick up another 8-in card
so I can sum 8x stereo submixes via analog (right now I can do
just 4x at 22 bits A/D-in with the one 8-in card I have).

Neil"DJ" <nowayjose@dude.net> wrote:

But why? If all I wanted was 8-channel summing I would just use
the Paris rig & go in analog. My whole point (in my hopes &
dreams) for the Pulsar card was to have ONE ITB solution.

>Damn!!!.....sorry this ended up being such a clusterfuck.

Not your fault, and I appreciate the help with the modules & internal routing/connections.

Which is ironic in a way, since for me the RME stuff is reasonably intuitive & extremely stable and sounds so fucking pristine that I don't wanna part with it.

>and you and I have been friends here for years and I sorta'
>feel personally responsible for your woes right now

You are not responsible in any way for my woes, and my woes with regard to this particular piece of hardware will be over as soon as I get reimbursement for the card & shipping both ways (yes BOTH ways - he should've never sold it to me in the first place if it couldn't do what I explained I was looking for it to do, so he's going to have to eat shit on the return charges as well).

>but certainly don't think for one second that Gary would

I don't know that he intentionally misrepresented anything, but rather I think that he was just too busy lecturing me on his views of why I shouldn't be using anything higher than 44.1 or MAYBE IF YOU HAVE TO, 48k in the first place, so he probably wasn't really listening to what I was saying.

Some people just don't listen to their customers.

There is actually a way to do this. It is called XTC mode. I haven't paid any attention to it really because using Pulsar plugins in cubase wasn't one of my priorities. I don't see much in the way of successes with it on the Pulsar forum. It seems to be viewed by Pulsar geeks as an anachronistic mode of working, but every platform's aficionados have their preferences. Since you brought this up, I decided to have a look around and I have found the location wherein the "XTC" mode can be launched and saved as the default project. I'm going to explore this and, FWIW, see if I can get it working. If you want to hang on to that card until Monday, I should be able to tell you if it's worth fooling with.

Cant do anything for you there and it will cost additional \$\$ to achieve this functionality. No way around it.

Hmmmmmm....don't work at these sample rates so this might be the biggest deal breaker of all. The reverbs are the DSP suckers. No doubt about that. You're basically halving your resources when you work at 88.2.

>
> So, if I kept the Pulsar card I would have to either:

> between the Pulsar & the SX environment?

I think this was a big misunderstanding. Doing the fader moves and panning in the Pulsar environment seems to be the preferred MO on their forum. I prefer the summing in the Pulsar environment when I'm not summing in Paris, even when doing the fader automation and panning in Cubase, but more DSP based advantages are available when mono tracks are streamed from the native app and the fader moves and panning are done in the Scope mixer. If you want automated faders, panning, etc., you will need to do some midi mapping in the sequencer to automate the mixer moves in Pulsar. It's a deep application and needs some time to get one's head around in order to access it's most powerful features. It's not an overnight read, though to get it working the way I wanted it to work was an absolute breeze and it remains rock solid. Yesterday, I looped a 40 track project for 12 hours and it

didn't crash once. The way you work and I work are somewhat different though.....especially the sample rate situation and the DSP limitations on the card at those sample rates are disappointing, I'm sure.

>
> So, there you have it in a nutshell.
>
> Neil

All three of my cards only total 18 DSP's and lots of that power is occupied by my huge routing matrix in order to interface with Paris I/O, but I'm gonna try to get my head around the XTC mode and see if it's viable. Summing in Pulsar instead of Paris should free up about 60% of the resources I'm using and allow them to be used for XTC plugins in Cubase SX. Who knows???.this might be the ****! I'm really curious now. Had I known that was a priority for you, I would have looked into it sooner.

Cheers,

DJI think you are making an assumption about it just being a dongle. They are advertising it as a DSP box that will not use up CPU resources. The firewire technology Focusrite is using comes from a division of TC. Some of the TC technology is used in another Focusrite product, the Saffire 26 I/O, it's the same chip set used in the Alesis 26 I/O and the new Presonus 26I/O product. I believe the technology used in the Liquid Mix is the same or similar to the TC Powercore firewire DSP.

Anyways, I believe that this is the case.

I am thinking about adding a couple of 19"-20" LCD monitors to my pair =
of 21" CRTs.
I want to use 1280x1024 in a four monitor setup. I'm looking in the =
\$250 or less range.
Here's a few questions for those that know the answers.

Is there any benefit with Paris using ' widescreen ' format monitors?

What parameters are most important for quality using Paris and Cubase?

Maximum resolution

Pixel pitch

Response time

Brightness=20

Contrast ratio

Viewing angles (Mine will be no more than 90 degrees = horizontal.)

Color support

Scan range

Native resolution (How does this play into my 1280x1024 usage?)

Any brands to stay away from or go to?

A few I'm looking at:

This seems the best price/stats wise:

<http://www.tigerdirect.com/applications/SearchTools/item-details.asp?EdpN=o=3D1870817&CatId=3D170=20>

These are all okay I guess:

<http://www.tigerdirect.com/applications/SearchTools/item-details.asp?EdpN=o=3D2323225&Sku=3DA179-2008>

<http://www.tigerdirect.com/applications/SearchTools/item-details.asp?EdpN=o=3D2606497&sku=3DS197-2016>

<http://www.tigerdirect.com/applications/SearchTools/item-details.asp?EdpN=o=3D2418924&CatId=3D170>

http://www.newegg.com/Product/Product.asp?Item=3DN82E1682401_4111&CMP=3DAF=C-Dealnews&ATT=3D24-014-111

http://accessories.us.dell.com/sna/productdetail.aspx?sku=3D_320-5003&cs=3D=19&c=3Dus&l=3Den#reviews

Thanks for all the help as always and happy turkey day to all.
Tom the Turkey

 There's a tutorial in the book I wrote about it, I think, and if there is I can send that chapter to you.
 That said, having done previously trying to match a MIDI performance the parts where time drifted sounded awful if locked to tempo and any loops I synced up to it lurched around like me after my fourth Patron gimlet.
 So I would up hiring someone to play to a loop.

-----=_NextPart_000_03E1_01C70EB2.C9910340--Tom,

If sticking with the 1280X1024 resolution is a priority, go for 19".
Most 20's are higher resolution. LCD's just look best at their "optimal
resolution". On the LCD's I've used, downgrading from the optimal
resolution makes you feel like you're in the pre truetype days (aka the
jaggies).

Personally, I like the extra real estate of a 20". Can see a whole lot
of mixer in Paris at 1600X1200.

:~)

There are also streaming narratives that Slipperman has been doing for a

while on the new Mixerman site <http://womb.mixerman.net/index.php>

At the top of the page is a little AM radio, click on it, then click the link button, and then again on the "slipperman distored guitar " link,

Inside are around 20 narratives covering drums, bass and guitar with a vocals narrative being added later today I believe. Highlight one of the topics and click on the play knob...the only downside is there's no pause button and many of these are at least 45 minutess long (there working on that as we speak I believe)

Are you saying you can't load all of the mixer and if so how much?

Any chance of a screen shot of a maxed out mixer so I can see what's not showing...would be appreciated

I just want to say "Thanks!" to everyone on this newsgroup who's helped me
with one thing or another concerning Paris, recording and life in general.
I may not post much, but I'm here reading every day.

You people rock!

Dunno, maybe you caught the only crappy part.Interesting. Very interesting. A real hoot at times,
but some very useful
information as well. Thanks for the post James.

Egggzactly - sounds like one giant clusterfuck of a workaround
to me.

>It seems to be viewed by Pulsar geeks as an
>anachronistic mode of working,

And if the Pulsar geek power-users think this, then what of us
mere neophytes? Shouldn't this tell you that it could be an ass-
puckering experience? Not interested... looking for something
that's going to increase productivity, not add 10 steps to what
ought to be a simple process, like inserting a plugin, or force
me to do the constant window-toggle between SX & any Pulsar
plugin's I might want to use, but would then have to do so in
the Pulsar matrix (in fact, isn't that why they're called
plugin's? Otherwise, shouldn't they be called plugOUTS? :D)

>I played back an 88.2k project at the 96k samplerate just to
see how the Pulsar EFX
>> sounded & I set it up for summing through the big Pulsar mixer

>Hmmmmmm....don't work at these sample rates so this might be the biggest
deal

>breaker of all. The reverbs are the DSP suckers. No doubt about that. You're

>basically halving your resources when you work at 88.2.

I was actually VERY surprised that the 14-chip card didn't have the horsepower to do this... of course, I was having to use the big mixer in this instance, because I was trying to see how the whole plugin insertion thing would go, so I could evaluate whether I wanted to even consider this as an (unexpected) option, and as you yourself pointed out, the big mixer consumes up a whole lot of DSP resources in & of itself. What I had originally hoped to do - and what I specifically asked Gary if I would be able to do, and to which he replied affirmatively that I indeed could do - was to be able to sum using the Pulsar mixer, insert a few Pulsar plugins on individual Cubase channels, and maybe replace a couple of 'verbs - all geared around the key point of "can the DSP handle this at the 88.2k sample rate?" In fact I had originally ordered the Project card, and then I e-mailed him back & asked him if I should get the Professional card just to be safe... he said that I probably should, that he wasn't sure if the Project card would be able to handle it (yet he was going to go ahead & sell me one of those anyway??). So yeah, I was pretty shocked when it waved the white flag on DSP resources so early in the game.

>> Irrespective of that, why do I want to do this? Why

>> would I want to have to toggle back & forth all the time

>> between the Pulsar & the SX environment?

>

>I think this was a big misunderstanding. Doing the fader moves and panning

>in the Pulsar environment seems to be the preferred MO on their forum.

Still, even if I wanted to do this, it crapped out after a reverb, the Vinco & one other thing was inserted - again, considering having to use the big mixer & summing 40+ channels of 88.2k... at lower samplerates you're probably fine.

>Yesterday, I looped a 40 track project for 12 hours and it

>didn't crash once.

And I'm sure my system will loop a 40+ track project with a metric buttload of plugins at 88.2k for that long... at least I have to assume it would loop it, because a much more acidic of a test is: "Can you WORK on the project for many hours straight - tracking, punching, rewinding, punching again, editing, scrolling, inserting & trying out plugins on the fly, etceteraaaah, etceteraaaah?", and the answer is resoundingly: "YEPPERS!", So, I assume it would sit there & peacefully loop all day if I asked it to.

Now, I understand why you're doing this, because you've had some stability problems with the RME cards in your setup... I don't know why, though - I have found them to be rock-solid stable, and the only time I've had a card-related stability issue with the Multifaces was when I had that older PCI card (pre v1.7), that they found would sometimes develop an intermittent power-up issue... RME upgraded it free of charge, even though the warranty had expired long, long ago, and when I installed XP Service Pack 2 I had to reload the RME drivers, as I recall, because something changed in the registry file & that was causing an issue of one kind or another; so that was a PITA until I figured it out, but I dunno if that's RME's fault, or just Windoze trying to reconfigure everything you've done, as it seems to enjoy attempting from time to time.

NeilYes, Happy Thanksgiving to all of you (OK, well, at least all of you who happen to celebrate that holiday).

Neil

rick <parnell68@hotmail.com> wrote:
>and stay safe.Don,

I have tried to get an entire Paris mixer on a normal 19" LCD. No can do. I think this would probably be the case on a 20 or 21" LCD as well. If the monitor was a wide screen configuration then it *might* work. The resolution I'm using for 21" CRT's right now is 1600 x 1200, but like I said, a wide screen might work at lower settings.

Yeah..I understand. In my situation I had to basically custom =
design/build my monitor platform and desk with the idea in mind of being =
able to work at 1600 x 1200 on CRT's and have the monitors close enough =
to me to where I could see what's going on while keeping them below the =
reference monitor plane. It's just *barely* adequate, but it works in my =

situation. Sometimes there is some eyestrain with seeing some of the = smaller icons on the screen at 1600 x 1200 due to the distance between = the sweet spot and the screen. That's why I think it might be a better = scenario to use a wide screen LCD. That way I could *possibly* work at = 1280 x 1024 and still be able to have the width to see all 16 channels = at once. The top and bottom real estate isn't nearly as important.

These are going to be on sale at Staples tomorrow morning fromn 6-10AM = for \$179.00.

http://www.newegg.com/Product/Product.asp?Item=3DN82E1682400_1081&CMP=3DKN=C-GoogleAdwords

The snowfalls have started in this region and since the roads are mere = goat trails and the mountain passes are covered with snow at this time = of year. To get to a Staples, I have to get my sherpas to help me hitch = a team of horses to a wagon, and then we arm ourselves with spears, = bows, arrows and make enough torches dipped in pitch that they will last = the 10 days it takes to get to the front range of the Rockies where the = legendary settlement called Denver is supposed to exist while fighting = off hordes of ravenous wolves who lie in wait. If I'm lucky and get past = the wolves, then there are the yetis and avalanches.....

;o)

Damn DJ here in Ottawa it's a balmy 45 F outside...absolutely gorgeous =
for this time of year...I don't usually have to hook up the huskies =
until mid January

Don

"DJ" <nowayjose@dude.net> wrote in message news:4565e97c@linux...

Yeah..I understand. In my situation I had to basically custom =
design/build my monitor platform and desk with the idea in mind of being =
able to work at 1600 x 1200 on CRT's and have the monitors close enough =
to me to where I could see what's going on while keeping them below the =
reference monitor plane. It's just *barely* adequate, but it works in my =
situation. Sometimes there is some eyestrain with seeing some of the =
smaller icons on the screen at 1600 x 1200 due to the distance between =
the sweet spot and the screen. That's why I think it might be a better =
scenario to use a wide screen LCD. That way I could *possibly* work at =
1280 x 1024 and still be able to have the width to see all 16 channels =
at once. The top and bottom real estate isn't nearly as important.

These are going to be on sale at Staples tomorrow morning fromn 6-10AM =
for \$179.00.

=

http://www.newegg.com/Product/Product.asp?Item=3DN82E1682400_1081&CMP=3DKN=C-GoogleAdwords

The snowfalls have started in this region and since the roads are mere =
goat trails and the mountain passes are covered with snow at this time =
of year. To get to a Staples, I have to get my sherpas to help me hitch =
a team of horses to a wagon, and then we arm ourselves with spears, =
bows, arrows and make enough torches dipped in pitch that they will last =
the 10 days it takes to get to the front range of the Rockies where the =
legendary settlement called Denver is supposed to exist while fighting =
off hordes of ravenous wolves who lie in wait. If I'm lucky and get past =
the wolves, then there are the yetis and avalanches.....

;o)

g about how these work.

We've got some deleted material here at work which we beleive is hidden in a temp file, which is in Windows\Temp. Only thing is we can't copy the temp file because Cooledit has it open. We don't want to close Cooledit in case it deletes the file.

Anybody know how these Cooledit temp files work, and whether we'll be able to get the data back...

....or know which forum I'd be better off to go to? ;o) I know very little about Cooledit...

Cheers,

Kim."Kim" <hiddensounds@hotmail.com> wrote:

So you have a tracking rig and a separate mix rig?
I have thought about doing that myself.

The mix rig would need to be on win XP since the URS plugs don't work on Win ME. I doubt if the Waves SSL plugs will either. XP on the mix rig shoudn't be too much grief if you only need 1 x ADAT interface per MEC and don't need to interface with ADAT machines.

;o)

These are going to be on sale at Staples tomorrow morning fromn 6-10AM =
for \$179.00.

=
http://www.newegg.com/Product/Product.asp?Item=3DN82E1682400_1081&CMP=3DKN=C-GoogleAdwords

The snowfalls have started in this region and since the roads are mere =
goat trails and the mountain passes are covered with snow at this time =
of year. To get to a Staples, I have to get my sherpas to help me hitch =
a team of horses to a wagon, and then we arm ourselves with spears, =
bows, arrows and make enough torches dipped in pitch that they will last =
the 10 days it takes to get to the front range of the Rockies where the =
legendary settlement called Denver is supposed to exist while fighting =
off hordes of ravenous wolves who lie in wait. If I'm lucky and get past =
the wolves, then there are the yetis and avalanches.....

;o)
