no copy
protection of any sort, it's honor system. 30 day non-expiring
shareware (you get a five-second nag at boot after 30 days), then $50
for non-commercial use and $225 for full commercial license. There's no
difference between the functionality of "trial", "paid" and "paid
commercial" though, it's honor system and it's upgradeable so you can
use it for free for as long as you like to see if you like it, pay $50
for the initial license if you do, and then pay the $175 upgrade fee
when commercial remote recordings come in.

Although it's PC native, it also runs on Mac OSX (it's in late beta);
Justin's goal (he's nearly there) is to have the two development
branches merged so PC and OSX upgrades stay neck-and-neck. But the beta
has been running like a champ for me here, and this opens the
possibility of bringing your HD home and plugging it into your OSX rig
and being up and running.

And there'll be more news soon re: REAPER and PARIS.

- Kerry

a firewire interface. I am, as the saying goes,
>> wide open to suggestion!
>>
>> Gantt
>If only Reaper did clickable playlists..... I'm about to blow out the
playback rig for my live act, and I would LOVE to set up for Reaper. AFAIK,
only Sonar has this capability. I'd do reaper in a heartbeat if it could
import sonar projects and playlist them. Time between songs is everything
live :)

>Hey All ,

Awesome having my power going off for from Sunday to Monday and having
it go off and on all day today.
But least where I'm at is near some hospitals so the power got back on

back on faster than most of the area. ADK might be closed the whole
week. Hope not need a pay check!!..
But at least I'm luckier than some in the area.

ChrisSorry for your suffering, Chris. My sister-in-law had some siding
damage on her house and her bbq got blown over. They lost power too,
but I think they are back now. Wouldn't be so tough, but they have a
newborn there, so no power is a scary thing.

Good luck getting back to normal.

- Paul Artola

Of course, fringe tweakheads like me are going to have to try the AMD thing most likely at some point. Most of my stuff here is really kind of old to be honest..... since I got out of the studio for a living deal I quit needing much horsepower. And to be honest, the multicore thing really is much more about native plugs than anything else, probably followed by improvements in hard drive speeds/throughput. Having a DSP system still rocks in this day and age, though native's become usable.
I have a quad core/intel setup, but the one PCI it has is already populated so the next best thing is probably going to be that system I bought off of Deej that's nVidia/AMD. I gotta get through 2 major projects though before I go there.

You should download, install and give reaper a try. If it doesn't work for
you then you should post the reason(s) why. Anyything short of that is just
more Ed stuff.

recognize
my internal CD writer. (Jam 2.5 was apparently designed only to work with
external SCSI writers.) In the hopes of updating Jam so that it would recognize
the internal writer, I've downloaded Jam 2.6 but the downloaded file (jam_262_up.hqx)

What are my options? They seem to me to be:
1. Figure out another way to get Jam to recognize the internal writer.
2. Find and connect a SCSI external writer to my computer and see if Jam
recognizes it.
3. Obtain some other CD writing software to replace Jam (but that would still
be compatible with my Mac OS 9.2)

Any thoughts on any of the above?

Many thanks,
RichardHi,
I tried it.
The spdif out on main mec does not work !
When I put the dll everything works fine.
Something meeses up with spdif out.
Hope this helps.

>Hey all,

Well, in case anyone here cares, I had a mobo fail on me a bit ago. Computer no workee. I can build my own, of course, but I'm sick of doing that and hate troubleshooting hardware at that level. At least give me a POST so I'm

not looking up beep codes, or worse yet remembering I never plugged in the system sound so can't even hear the damn beep codes.

I could have hired Morgan or Chris to do the job for me of course. But I'm pretty savvy with computers after 15 years working on them and really just didn't want to do the build myself, the config/research value-add that those guys give don't do much for me. So instead I had an online custom builder who does gamer boxes do it for me. Or at least I ordered it. Here's the config.

Asus P5Q Pro mobo, Intel P45 chipset
Core2 Quad Q6600 (4x 2.4 Ghz)
2GB DDR2 memory
ATI 3850 video card that will drive a 2560x1600 30" display
Intel certified liquid cooling system
Cheapest everything else (DVD RW, hard drive, etc and so forth, I have all of those parts)

That was $849 + shipping.

I realize this isn't the absolute cheapest price possible for this rig but I think I got a decent deal and there were a couple of things I liked about these guys. They don't force me to buy a Windows license (I have about half a dozen ways I can legitimately install XP and Vista on this thing), they were good about helping me find a few of the components, and they didn't try to upsell me on all kinds of stupid shit I don't need like $500 video cards.

We'll see. Pulsar users claim this chipset will play nice with my card but I'll believe it when I see it, esp with the quad processor. The LSI firewire chipset is something even MOTU will support, and one that LiquidMix users have switched TO on the forums, so the small (x2) PCI slot count shouldn't bite me on the ass. If those two things will work I can deal with pretty much anything else.

I'll keep the group posted on what I find, as usual this will be an SX/Live/Reason machine with 15,000 plug-ins and synths on it.

TCB

P.S. In a diametrically opposed treat I also bought myself a Leica IIIf camera from 1952. New tech does a lot more but the purely mechanical devices of the past are pretty freaking cool.Mike,

I wholeheartedly disagree. Obviously I started this chain of events, and to some extent it's territorial pissing, but who is to blame?, Ed for his cantankerous fuck you don't mess with me stance, or me for pointing out that I really don't like Ed's cantankerous fuck you don't mess with me stance.

The last time I had an interaction like this with anyone on this NG there were veiled 'i know where you live' threats thrown around, and so I begged off. I wasn't about to put my family life in jeopardy because someone doesn't like some shit I posted on a forum that I started over 10 years ago.

In the end, I want to be free to say, without moderation that I find Eds attitude really shitty, and that I stand behind every single word I said in my previous response to Ed.

And I want Ed to feel completely free to respond that I am a Moron, and an asshole.

Martin H
Lend An Ear SoundIt's specific, (broadly), to your motherboard, but if you go to the Hackintosh site

http://www.hackint0sh.org/forum/forumdisplay.php?f=145

It gives links to all you need....also

www.insanelymac.com

Email me if you run into major probs.. I'm a noob at it, but I got it working easily.

Martin H
Lend An Ear SoundDifferent situation.
They are marketing a computer that runs Mac OSX, the hackintosh crowd are
just allowing OSX to run on Intel machines, and suggesting the purchase of a
retail disk.
From what I can gather, there is even cross consultation going on.

Martin H

Great tip! I think the next step right now is going to be getting the
tech to give it his best shot and see where that goes.

Heya Mike - are you thinking of buying any more pres in the next year
or so or will this be a one-off?

If you'll be getting more channels, you might find the Seventh Circle
stuff to your liking. One C84 module (reportedtly closest to the Grace
vibe) plus the eight channel chassis runs under nine hundred bucks US
assembled ($469 if you're handy enough to build it yourself).

After that, populating the remaining seven slots with preamp modules
starts at DIY kits for $79. The priciest is $329 for the Neve channel,
$499 assembled - try finding a channel of really-brilliantly-executed
Neve for that price! The sound of the N72 is reputed to be spot-on
Neve, the C84 seems to be the kind of ultra-clean pre the Grace is
reputed to be. Killer reviews on these so far; it's the way I'm going
to be jumping in the new year.

- KHi Nappy,

Anything is possible. The more I learn about the code, the more I realize
I can do.

The immediate plan is for finishing up the scherzo and then working on the
PC ASIO driver.

All the best,

Mike

>Hey Mike,

Keep up your great work. I'm within two weeks of putting it all
together here.

Do you think your development on the Scherzo driver and/or the
multicore Tom's Hardware fix would help with Hyperthreading on
an older P4s? That would help more than a few people out I should
think.

Thanks for all the hard work!

Tom
