James,

ALC would be first on my list also, along with support for VST =
instruments,
but you're right about those things being on the "very difficult" side =
of
things.

As far as EDS effects, I'm actually very happy with what we've already =
got.

I'm not really missing anything.

The places PARIS lacks for me is in VST support, and more flexible =
routing
and grouping. Again, these things will be hard to tackle.

I'd support development for some more variety in comps, chorus,
delays, modulation effects, etc. \$100.00 for a good multi-pack?

Definitely more for ALC and major improvements along those lines.

Tony

ackspace, but =

I have

had it perform an undo at the same time. Work around: don't alt =
backspace

mixes, just name a new mix and delete the old later in windows.
