Hi=20
 Tom,

Yikes! Well, removing the house synch line from the =
 cfg file=20
 and removing
the default project would not affect whether Windows =
 boots or=20
 not. Both
are not looked at by anything until the PARIS =
 application=20
 loads.

This is sounding more like either damaged EDS card(s) =
 or a bad=20
 motherboard.

I'm not sure this will make you feel any better, =
 but we=20
 had basically the
same experience at work with am EMU 1820M.
=
 The=20
 external breakout box died,
and Adobe Audition became =
 useless. It was=20
 the same kind of nightmare. Two
employees stayed up all night =
 trying to=20
 sort it out to get a tape out to
a TV station the next =
 day.

I=20
 wouldn't give up on PARIS over this. Hardware failures happen no =
 matter
what platform you use - even tape - and they can be hell to =
 sort=20
 out.

I'd ask your tech to lend you a PC, and just try =
 installing=20
 a simple PARIS
system in there. If it works, just get a new =
 PC.
=20

I look forward to reading your post when you get this sorted=20
 out!

Good luck,

Mike
