Dell :

from PC World:
Users have been complaining about electric shocks from some Dell laptops; not to worry, Dell says they're harmless.

Dell has assured users of its laptops that there is no danger from electrical jolts sometimes received from the cases of some of its systems.

Users, including some reviewers, have recently complained of receiving either a continuous electrical "tingling" or sharp shocks from some Dell laptops. The Dell machines involved include

....seriously.

It's breach of contract at the least (the EULA is a contract,
since you have to agree to it), and consumer fraud at worst, if
you've legitimatley purchased something and are subsequently
 denied the right to use it.

Make a f

>> http://www.youtube.com/watch?v=oQbnPqimRiQI'm usually an electric player, but I need to buy a decent acoustic (with
electronics). I tried a bunch of brands, and seem to be converging towards a Taylor (something along the 714CE or 814CE).

Before I commit to an actual purchase, I wanted to ask around for any potential advice. As much as I'd love to buy from a luthier, I don't think I'll get much traction with my planned budget (as a reference, the 714CE would cost around $2800). I don't know many luthiers, and the ones I do know

have a worldwide reputation (and are therefore not making guitars for
$2800 - more like $5k and up).

While reading Taylor reviews, I've seen several references to the Martin
OMC-Aura, so I went to try it out. I found it to be incredibly ugly, but
quite playable, although the action is typical Martin (i.e. high action, a
guitar that you have to dig in hard). Since I play mostly electric, the nice
low action of Taylors is appealing to me.

Anyone out there able to make some suggestions? General or specific, good or
bad, I'm quite open to any ideas.

Thanks,
DanAll kinds of craziness is US equity markets and a (nearly unprecedented) between
meetings three quarter point fed cut. The captain has turned on the fasten
seat belt sign as we are expecting some turbulence.

TCBNERD!!!

>A key factor is what kind of music you want to play on the "acoustic
electric" If you play Bluegrass,it's different than if you play Jazz..You
can make a "AE" out of any acoustic guitar...thare are many good sounding
systems out there to install (Baggs,Fishman etc)...Taylors are good...but
they don't hold up well if you travel much..(I've had 3 of them,sold them
all) Check out some of the top of the line Takamines,Seagull,Collings...The
Taylor hybrid is cool...but the good ones are very expensive..the lower ones
suck (imho)

I'd try out a Breedlove before settling on the Taylor for sure. Very nice, modern guitar, not a Martin/Gibson copy. They make some in the price range you're talking about.

The Taylors you mention are both fine guitars. I own a 410ce and a 356ce 12-string and absolutely love them.

I think you'll find that once you get to the 400-series that there isn't a tremendous difference in overall sound, but more subtle differences due to the tone woods.

However, 400-series up will get you the "Taylor" sound. Really useful, especially if you're planning on playing acoustic leads.

My duo partner plays a very high-end Guild, which has a much more rounded and mellow sound as compared to the Taylor. The two instruments sound great together.

BTW, I went to the store with cash in hand to buy my first Martin and I left with my first Taylor!

Hope this helps.

Mark

>For live acoustic guitar gigs I currently use a Line 6 Variax 700
Acoustic modeling guitar. This is the one that looks like an acoustic
guitar, not the PRS-ish looking electric 700 version, although I have
one of those too.

The acoustic 700 VAX sounds quite good through the PA. It doesn't feed
back. Even when using the built-in compressor which is really nice to
use on fingerpicked songs.

Acoustically it's fairly quiet, good for late night practicing without
waking anyone. But without plugging it in, it's not a booming
sing-around-the-campfire acoustic guitar.

It has multiple guitar models to choose from including several that are

bread and butter, plus a few non-guitar models like banjo, sitar and mandella.

It also can do alternate tunings on the fly (via DSP so not quite as great as tuning them yourself, but for live it's fine and - important for shows - instant). It can also imitate a 12 string (again via DSP).

It looks good, with nice grain on the top. It's has a shallow body. It plays well. The upper strings have 24 frets, very rare for an acoustic.

It's more affordable than a high-end acoustic, and therefore less of a risk at gigs. It sounds as good or better through a PA than any other acoustic guitar I've heard.

The only acoustic guitar thing it doesn't do well is body slaps, which is probably why it never feeds back.

The output is mono. I do use it for recording direct sometimes. It sits nicely in the track and is good for L/R panned part doubling using different models.

Cheers,
-Jamie

The Taylor 714 is a very nice guitar. Taylors are actually pretty good for

amping and recording, they're well balanced. I had a 612 C- 3 part back, all maple,
and it was a great guitar, very even, but too bright and not enough bottom

end for the acoustic stuff I do. I switched to a Lowden 010, that has a fabulous

low end, and enough balance throughout. A very big sounding guitar. I run it through the Baggs M1 Active and a para DI. People usually comment on the

big, but beautiful tone.

Having said that, I switch a fair bit back and forth between electric and acoustic
and the neck is a bit wide for me to make the switch as smoothly as I would like.
So, while I love its tone, I'm planning on moving to a guitar with a neck closer
to that of the Strat, PRS, Tele etc that I also play.

I echo Thad's recommendation of a Collings, these are fantastic guitars. I also am
loving Santa Cruz which have a couple of models in that price range - the

Pre War issues - OM/PW, D/PW. I likely will end up with the D/PW which is as
big as I need, but also sweet and clear enough for fingerstyle.

Here is a helpful link to a comparison of guitars in the $2K - $3K range.

http://www.acousticguitar.com/issues/ag107/feature107.html

I think you're in Ottawa, (from your email addy) so check to make sure the

prices have come down with the recent growth of the CDN $.

Hope this is helpful,

Ted

>Wow Aaron, that's a real PIA. Did you try talking to the retailer who sold
you the package for some support, i.e.. have them deal with Tascam? Or did
you buy it from a private seller? Which product are you talking about? I
absolutely love my old Gigasampler, but I too have had some support issues
with them. I bought a used software package and the previous owner never
transferred the license to me completely. So instead, whenever I call up for
support, I just use his name, LOL. If you can't get it to work maybe you
should call a lawyer, but what a waste of time and trouble. Sorry to hear
about this bud.
