I recently installed to EDS 1000's in a MDD Dual boot Power Mac
and I keep getting an error message that the EDS cards are not connected
right. If I use one at a time, both cards work individually in any of the
available PCI slots. When I install both cards I get the message. I have
double checked my inter-connections but still get the message. Even if I
install both cards and do not make the inter-connections, I still get the
error message. Any help? Please?

Thanks

Michaeli know from personal experience that even when i think they're hooked
up right...they ain't. get a magnifying glass, it really helps.

>MichaelJust curiousHi Rohde,

I'm using an asrock am2nf3-vsta motherboard with paris in xp and in windows
98se. It's an AGP, AM2 motherboard that will take a pheonom chip.

I haven't been able to get a GeForce 6800 or a 6200 video card to work in
Windows 98 SE, though my old Matrox G400 works fine.

I also had to search around a bit for the USB2.0 Windows 98 drivers for the
chipset - I think I got them from the Gigabyte site.

Hope this helps.

I second Rick's comments. I spent a very frustrating morning trying to get my first dual-card setup to work until a very patient Rod Lincoln walked me through things on the phone.

As it turned out, even though they LOOKED like they were all plugged in right, I was missing a row of pins on one of the big cables. It's extremely easy to be off by one pin or even miss an entire row. Trust me, I've done it. And I'm a computer tech by trade, so it's not like the first ribbon cable I've ever plugged in.

I have now received the Alps K series motorized faders - I decided to not use the N model faders that are apparently in the Euphonix surfaces. The K series is much higher quality - there are two rails that the fader slides on - I can see why they are rated at 10x the lifespan! (But 2.5x the price.) Also, the K series is very high performance - it only takes a small pulse to make it travel the full 100mm. (Good problem to have I figure...) I'm upgrading to a faster processor to handle that. In the meantime, I have touch sensors working and am converting fader movement to control messages. For initial testing, I'm leveraging my existing code that only outputs MIDI, but once the basic system is stable, I'll start interacting directly with the EDS card.

>DougHey thank you Paul and Rick,
You are exactly right. After staying up until 6 AM, I finally managed to
get it right. I put them both in my G3 and it worked right off. Then I put
them back in the G4 with out dis inter connecting them, just left them wired
together, and there it was. Thanks again guys!!

You need a sunken monitor bay in your table for that so it does not
impede speakers. I have my desk modified so the monitors sit about 7"
below the top surface. I hear a really big improvement in the stereo
field when there is nothing in between the speaks. Actually, with that
one you might be able to mount it on the far wall and avoid all issues
with near fields.

that would SO rock if it's doable.

I can take a look at this. I'm pretty tied up right now between school and

working on the Amp4 algo. I am really stoked about hearing it and getting it out to you guys. I'm also hoping that the class A emulation section could be transplanted out and used as a stand-alone effect to give tracks a bit of analog glow.

Did you get my email about a week ago?

All the best!
Mike

Got into a quad core about a month ago: Q6600, GIGABYTE GA-P35-DS3L LGA 775
Intel P35 ATX Intel Motherboard, 2 gig of kingston RAM DDR2 800. I've been
running Reaper. Current project is 40 tracks, 110 plugs, cpu is hitting about
40% with a buffer of 256 -delta 1010LT. XP with SP2, pretty well tweaked
out. The power is certainly not limitless, but dang its been a freak show
with plugs. Lots-o-fun.
happyquadding,
MR

I still have a similar feeling with my dual G5, although your box is
probably 2-4x faster. Zoom!

Cheers,

> Cannot wait to hear the amp ??!!
Beacuse my emails to you bounce back I had posted here back then so you can
read it.
I am attaching here:

My email is bouncing my emails to you !
So here is my answer
Hey Mike !!
Thats great news!!!
I will try that and let you know !
I am waiting to hear that amp sim !!
One thing to encounter is the EQ4 when used as hih pass or low pass then

something is wrong until I change the Q factor from 1 to 2 or something.

Can you inform as what is the default Q needed to be entered to have the

EQ bypassing when selecting lowpass - hihgpass and having the frequency all the way up or down.

Can this EQ4 have a mono version too ??

It would be great to have one as an insert on a audio track !

Thanks again.

Regards,

Dimitrios

>Dear Mike,

Are the ensoniq dp algorithms copatible with ensoniq ?

Ensoniq dp2 DP4 dp Pro ?

There were some nice algorithms for ensoniq ASR-10 from Waveboy in disks.

Do you think these can be translated to Ensoniq Paris ?

Thanks again for all your efforts.

>Sheesh, I can't shut up about it. I'm really blown away -high track counts
and really no big worries about tossin' in the plugs. Last night, we had
a freeamp 3 feeding a couple of distortion plugs a compressor and then another
freeamp 3 and then routed that channel to two subs, one with a verb and the
other with a dual delay. I spent about 700 for the pieces parts. Can't
believe the bang for the buck. At least for me in my little tiny world ITB
has definately arrived.
take care MR

>Hi Dimitrios,

I sent you something new to look at not to long ago. It must have disappeared into the ether.

Are you on skype? That would be a great way to communicate on development ideas.

Alternatively, you can send email to johnwaynefan@hotmail.com, but I don't check it as often.

I'll resend my last message.

All the best,

Mike

(combination
of vst's and vsti's). 44.1/24bit. I'm ok with 6ms so I haven't played around
with lower latencies. I'll have to experiment a little and post back. Paris
is still the bomb, but being able to mess with all these vsti's -all in one
box, has been great. I could get similar results from Paris, but I needed
to sync up at least two computers, sometimes three, to make it happen. Now,
one project, one box. Cool.

Nice to see you here (if y'all don't already know, Danny is a monster Nashville guitar player). Are you still doing the 45RPM thing? I gotta come see that...

Not much help as I have been trying to do the same thing for a year or two, but keep getting sidetracked...

Just wanted to say "hey"...

The following link has a pic to the right:

<http://en.wikipedia.org/wiki/Vegemite>

The pic shows a "normal" amount of vegemite on toast. As you can see it's spread nowhere near as thick as it was in the video, and the toast is, in fact, buttered. ;o)

Cheers,
Kim. This is a multi-part message in MIME format.

I grew up in the sticks on bouillon cubes, I love salty/soy sauce =
oriental food, and I've found the taste of a good imported beer much =
more appealing than the mule urine that passes for beer around the US =
generally. Vegemite and I might get along quite well, actually.=20
