---=_linux43f8787d--Hi all

Got an upgrade to Waves 3.5 and many of the plugs I used in 3.0 are now stereo plugs in 3.5

Does the stereo plug use more HP than it's mono counterpart?

And if so is there a way to copy user settings from a stereo plug to a mono version of the same plug

DonWhat's the advantage of this mod and how much would you charge to do one?

What would be a maximum viable length for SPDIF cables if I am clocking via SPDIF as well as sending audio data? And how easy is it to crimp new connectors if I need to?

Also, MEC SPDIF connectors do pass 24 bits, correct?

Thanks!

I am not being flippant. The quality of the cable, connectors, and even the SPDIF driver-IC all contribute.

I have run a 25-foot SPDIF successfully if that helps.

MEC SPDIF is 24.

Genel have Waves 3.6 (free upgrade from 3.5) that has mono versions not available in 3.5. The theory is that it takes more cpu to process half of a stereo plug-in when you only need a mono. As far as presets; they have separate libraries which I assume makes them incompatible.

Just a side note: Since I did my last computer upgrade I get a DC pop at the beginning of a track playing back with DX plug-ins. Some plug-ins are worse than others with the Waves RComp being most offensive. This can be eliminated by placing a mute at the beginning of the track, but this doesn't prevent it when starting mid-song. I would sure like to know if anyone has ever experienced this before.

>First off, thanks to DeeJ, Aaron, Gene, et al.

Working from the ground up, I have established this:

1. With 3 MECs in a 4-card system, external clock, with no SPDIF devices clocked thru Paris, I get a perfect system upon starting Paris and opening a project. However, if I close the project and try to reopen it or another project, things get squirrely, either digital distortion on playback or my 2nd submix not playing at all.

2. With two Kurzweil boxes patched in (and clocked) via SPDIF, things are squirrely from the get-go. Sometimes it works perfectly, sometimes not. When it works, it seems to be after initial start-up of Paris only; once again, re-opening a project is sketchy as hell, with a few exceptions.

3. When I patch the Kurzweil boxes thru a Digipatch digital patchbay, it's the same as scenario "2", only with even fewer instances of success.

I have tried connecting the 3rd MEC to card 4 instead of card 3, but that seems to have no effect.

I have no BNC terminator plugs on the MECs, and plan to order those tomorrow. I have some small hope that these will solve some of my troubles?

Anybody have any further suggestions?

JimmyI occasionally get the odd pop here and there and have always used your method of adding dead air just before the offending section...especially mid track

Don,
Render your Waves plugin tracks so you can still use
live plugins during mixdown but with only one
possible pop at the beginning in the track where the
object starts.

I continue to maintain that Paris will be a collectors item one day.

dbl just got a copy and it seems to be pretty good....we are in the
process of putting another quad xeon and a 1.2terabyte fiber channel
array in the graphics lab so I should be able to put record an entire game.

....mind you, strange I should say that, because now that we have digital
television over here and digital set to boxes are becoming more common, a
lot of people are actually beginning to have trouble with that too. "But,
but why can't I just press 9 on the TV remote to watch channel 9?"...

Cheers,
Kim.

Hehe, indeed. ;o) Exactly what I'm afraid of. ;o)

I already have a paypal account. I'll let you know where it is if I find
I need to go get a UPS on the weekend. Though Rick has me wondering with
all these different account types whether I have the right type for people
to pay me. Do they all do that? Surely I chose a type which allowed people
to pay me. Oh, it's so long ago, and so many brain cells have died... ;o)

Cheers,
Kim.

If your system doesn't work well, it's better to post what's wrong than trying to fix it with someone elses config.

LOL! Thanks for the offer, but we're on 240V down here. ;o)

....and I'm highly suspicious it would be cheaper to buy one here. :o)

Cheers,
Kim.Kim,

Check the manufacturers site for the software. Tripplite and APC have software available for download (free) on their site. I'm in if the solution is a new one.

If the solution is a new one I think I'll be going APC. There's nothing like a decent brand.

Cheers,
Kim.

I went to the APC website and units that we pay 225.00 USD
are like 1250.00 Aus.

Holy Cow! The exchange rate is about 1.35 Aus dollars to USD,
so that does not account for it. I hope you have some locally-
made ones that are good...

Not quite in the mountains but in the "sand hills" of Fayetteville, NC near Pinehurst.

If you're ever in the area feel free to call.

Andy Pow

Digital Wave Recording

127 Maxwell St

Fayetteville, NC Yeh, well there is that also. You should see the way music gear is priced.

I remember way back in the late 90's when I was looking at monitor speakers.

Event 20/20 Bas's were \$350 on the shelf in the US, and on the shelf in a music store here the tag said \$1799. I don't quite know why. Someone's making a killing I expect.

I'm going to have to look into it. I'm pretty sure the old Sola brand was Australian made, and they've apparently merged with Powerware who I believe are also Australian. They seem a little cheaper. I'm not going one of the Asian imports again after the effort of this last one... unless I can get it going with software tweaks.

Mind you I can get an APC CS 500VA for \$139. Sure, it's only going to last 20 minutes, but at least it should be good enough to stop the spikes. Power's only going to go off for longer than 20 minutes once a year anyhow.

Cheers,
Kim.

We've got a CompUSA here and I've got 4 x of these unit powering my MECs , computers, monitors, clocks, converters and anything else that would bite me if I had a power issue.

http://www.compusa.com/products/product_info.asp?product_code=298348&pfp=external&tabtype=rv#moreinfo

One of these would be more than enough to protect a single server, I would think.

....unless I was to get a 240-110 Stepdown transformer (which are about \$100 I think), and you were to ship me a 110V PC power supply to put in the server, but even then I need to run the router as well. I guess you could ship me a 12V 1A plugpack as well.

Much as it sounds good in theory I think by the time you added up all the extra bits like shipment, stepdown transformer and all the other bits and peices that would be needed to cater to the voltage difference, it wouldn't really be worth it.

I'm sure I can find something for under \$200 down here...

Cheers,
Kim.

nice APC1500. That's what I use and it is super.

Spend the extra though and get both a good brand and one with AVR (automatic
voltage regulation) Let us help you pay for it,
it is the least we can do.

Tripplite is another option and while they don't tell you the aus.
price on the site, they do have a rep assigned to you all.

>I can get an APC (RS?) 1500VA for \$569:

http://www.cpl.net.au/green_guide/984945502.pdf

Or the APC RS 1000VA for \$469. That would be plenty of mumbo, but I assume the 1500VA would keep it running for longer if power dropped out for a while.

Or we can get a Powerware 5110 1000VA for \$219, which is more the price range I was thinking. Of course I want one that works properly. AVR sounds good. I'll check some specs when I get home.

Obviously it's not such a big deal if 20 people put in \$20 each instead of \$10, as opposed to one person (me) forking out \$500.

....and of course every \$10 you guys put in becomes like \$13 at this end.

Cheers,
Kim.

Thank you much.

Rob_A

www.studiomanitou.comStrewth!!! ;o) Tell us what you need. One morning you will wake up to an invitation to a pub. When you get to the pub, it will be packed with people. All of your friends will be there (and the ones there that you've never met will be us) and there will be this big cake and the band will start playing hail to the Queen, when all of a sudden Naomi Watts will jump out of the cake, clad in leather weilding a bullwhip in one hand and and APC in the other It will then be up to you to errrrrrr.....liberate it in whatever way seems appropriate.

This is the only condition I have for sending you APC money.

>Hi John,

I know you've posted a lot of questions about your problems over the last while, and I don't remember all the ins and outs, so I appologize if I'm repeating what's allready been said (maybe even by me).

I used PARIS all day yesterday transferring tapes - at least 9 or 10 hours straight and no plobelms at all. It can just work.

To succeed, PARIS (in my expereince) needs:

lots of power - true power 550 PS for me. 450 wasn't enough.

lots of cooling - I cut a hole in the side of my cases and mount a fan to blow air away from the PARIS cards. No more clicks or freezing here - ever. It's not that hard to do, either. I just use a drill to make multiple "punches" in a circle and cut out what's left with some snips. Then, I drill the mounting holes and mount the fan. Voila. I also leave an empty PCI space between my cards to allow more air to get around them. They need it.

No bad DX plugs. Try running with DX disabled - if it's stable, you know that a bad DX plug is the problem.

No hyperthreading/dual CPUS - this is a rule I'm breaking successfully. Go figure.

Non-defective cards - I'm suspicious that this is your problem. If you've tried the card(s) in another computer with a clean install and all the afore mentioned requirements (especially the cooling one) were met, you probably have a defective/dammaged card. At least they are cheap these days.

I hope this helps, John. It's working for me.

Good luck!

Mike

If I quit PARIS and reopen then everything works fine (for awhile).

Any ideas on this issue?

PARIS 3.0 XP,P4

PeteTie the tubes, no more rubes...

>The dead _still_ vote in New Haven. A lot of them. We're one of the last Democratic
machine towns in the US. The city council is 1 Republican, 17 Democrats,
and two independents who caucus with the Dems. It's nuts.

Read the Schneier article. It's long but it's really good and he wrote the blowfish algorithm (and was almost prosecuted for it) so his security/privacy bona fides are unimpeachable.

shuffleboard player (the bar variety).....but I'm into the *speed of light
followed by a dead stop* thing when it comes to removing someone's piece
from the board. My skill was directly proportional to my level of
intoxication (more intoxication leading to being better at shuffleboard).
Funny, seems that shuffleboard wasn't the only thing tht was positively
affe3cted by drinking. When I turned 40, I decided to give it up and shortly

thereafter I developed allergies to everything that grew in Austin, my hair started thinning and my vision went south.

> >Just FYI, since some people here are kind of internet buddies, I'm taking two weeks vacation. One in Thailand and one in Japan. Both hanging out with a good friend who has been teaching English in Osaka for eight years. I'm going to try to do a blog/picture thing on my gmail account and I'll post the link here. Should be a hoot.

TCBA friend just returned from Thailand. He said it's back as far as tourism goes in most places. He said Laos was incredible.

Have a good one.

>You hit the nail on the head again DJ. To quote the incredibly profound movie Spiderman ;>), "With great power comes great responsibility." Yeh, I know it's corny, but it's true. As soon as you start talking about people being responsible though, someone starts whining about being disenfranchised. It takes too much time and effort and basic intelligence to be responsible yada, yada, yada. Ok, rant over.

fore this 6V goes out

of the power supply put a 3300-4700uF/16V electrolytic with negative to the
ground.

Same for anode voltage, might be 120V-170V so put a 22uF/250V there.

Hope this helps.

Regards,

Dimitrios

I will check out more when I get home tonight.

D, you think it is still the PS even though the mic was not humming when put stright into Paris? soething that t start to do when I plug into the comp?

How is the U47 project going?

I got it solved. It was the Magma Chassis's power supply was not "seated"
into slot properly. Paris is working fine now.
Thanks
