channel
levels set at 0db - all those channels were left untouched
because the mix & balances were, of course, coming from
the SX mix. I did have to bring the Master down to -2.4db to
avoid clips there, which should tell you that Paris was indeed
getting good solid levels into the channels. I set Paris
for "Live Mix" mode & bounced to disk at 16-bit/44.1k. This
actually - it could be argued - gave Paris an advanatge in a
way, since no dither was needed to convert to that bitrate.

To convert the .wav files to hi-rez mp3 (the reason I didn't
mix down directly to mp3 in the Cubase 2-bus or stems version
is that I wanted to make sure it was fair since I couldn't do
that in Paris (i.e: bounce directly to disk into mp3 format) -
IOW, all versions had to undergo the step to convert from .wav
to mp3... anyway, to convert from .wav to mp3, I simply
imported all three versions into a new project in Cubase, made
sure they played back at as close to the same relative power

levels (both peak & RMS) as I could, and exported straight to hi-rez mp3.

And that's what you're hearing.

way"? lol

Keep the comments coming guys! It's interesting so far - different people are liking different versions! Will any one version win out?

s),

Two options (there are a lot more)

1 Remote desktop in XP pro

Xp pro includes this ability, it just has to be enabled. Xp home can connect to an RDP enabled XP pro box, but doesn't easily sit awaiting a connection (it can wait for a response to and "invitation" but I've found that to be messy, and it's tough to send an invitation from a machine until you have control of it).

2 TightVNC

TightVNC is a GNU/GPL product.
