sing only two.

I'll check each mec individually and try card A as the other end =
just to see.

Thanks,

Tom

"Don Nafe" <dnafe@magma.ca> wrote in message =
news:46962992\$1@linux...
sorry for these dumb questions Tom but...

does this second Mec work all by itself...with every card?

are you sure you have Mec #1 connected to Card A ? (where ever =
that card is in your rig)

Don

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:4695d5bf@linux...

Sorry to shout but this is driving me insane.

I am working with a cloned drive that used to work with
2 Mecs and WC. Now no matter what I do, I can not

get a second Mec to show up and receive clock. It doesn't matter if it's at the end of the line or anywhere else. It doesn't matter if it's internally clocked or = externally clocked. I've changed Mecs, clock cables, SCSI cables and no changes. I've even tried a reinstall of Paris. Same deal. =20

I must be doing something totally wrong for this to continue. The only thing else I can think to try is swapping the last=20 EDS card with another or go down to four. Maybe it's card 5? Or, triple check the connectors between all the cards again.

All EDS cards are up and running and play audio with Paris = effects.

All 5 cards share 3 IRQs with nothing else.

What else is there?

Sadly,

Tom

I choose Polesoft Lockspam to fight spam, and you?
