>Is anybody using Peak 3.0? I want to put a whole project of 14 songs in as

a single wav file, then split it up into I think they call it regions, then move it over to Toast and burn the CD. The unique situation is this.... all these songs overlap and can't have 2 seconds between them. Who will help out ol'

Stevelf I were to get one of those MOTU 8-Pre's, would there be anything to stop me (other than good common sense LOL) from using the lightpipe out of that unit to go into the lightpipe in on the Paris ADAT module at either 44.1 or 48k, and using Paris in "Live mode" to EQ & sum four Toms (each on their own Paris channel) to a stereo mix, then going from Paris' analog outs into 2 analog channels of my Multiface to get into CubaseSX at 88.2k???

NeilThe combined delay could make any attempt to monitor against prerecorded tracks a little awkward. I love setups like this. Very DJ-esque!

>NeilHmmm... well, these would be Toms, going down at the same time as the rest of the kit on the first pass (it's for an upcoming demo project for a band I'm going to be recording, not for separate toms OD's), so do you think there'd be any perceivable delay between what's going straight into the Multifaces (such as guitar amps, bass, the rest of the drum kit) and the Toms themselves being routed through Paris this way?

If so, I suppose I could simply elect to not provide the two-channel stereo Tom submix in the cans... there'll be plenty of Toms in the overheads, anyway.

ALSO... is there anything to stop me from using two more channels & sending them hard-panned to the monitor outs of my MEC for kick & snare if I wanted to do the same thing? In this case, I'd be using either the GR MP2NV or the Chandler TG2 as the preamp, so I'd be going into Paris via Analog inputs.

Get what I'm after? I'm thinking about simply using Paris in "Live Mode" as a small console to tweak things before I hit the RME convertors to go into Cubase. EQ would be useable, but I don't know if the Paris comps would be (lookahead latency?).

I might need an 8-out card, though... right now I only have 4 outs, the ones on the MEC. That would be enough for kick/snare/stereo Tom mix, however.

>Long time since 3.X. In 5/6 you can define regions and convert regions to

Most of the advanced features came after 3. The good news is that Bias will upgrade from any previous version for a fairly low cost.

My memory is hazy, but I thought you could add song starts right inside the early versions of Jam.

HELP!

Thanks!

ganttJust in case you were unaware, the outs on the MEC itself are 20 bit, whereas

the 8 In /Out cards are 24 bit.

>France Elects a Thatcherite President
Kenneth R. Timmerman
Monday, May 7, 2007
Newsmax.com

On Sunday France elected a pro-American, conservative named Nicolas Sarkozy as its new president.

The 52-year-old who beat back by 10 percentage points his Socialist rival, promises an unabashed Thatcherite agenda for France.

Sarkozy also replaces the embattled Jacques Chirac, a relic from an earlier age of French politics, who made anti-Americanism his hallmark.

Sarkozy campaigned on a platform of sweeping reforms, pledging to dismantle large portions of the social welfare state and to make France competitive on world markets again.

You can read the rest here:

http://www.newsmax.com/archives/articles/2007/5/6/150434.shtm?s=al&promo_code=3392-1

Carry on,

RichPut it in SONG mode. That way, it plays dead and gives you 16 channels to work with. If you're using Cubase or Sonar, you can download the appropriate bank/program setup and call up the patches by name.

Thanks to Deej and Aaron for dreaming up this vacation.

It was beyond swell to meet new faces DJ, Aaron, Dedric and to have
lunch with all and JamieK, John Macy, and Rohde too!

Hot Damn, I mean next time I'll order medium Thai Fried Rice.

El Miguel
