en as you move your mouse toward the top of the GUI to save the project, you computer locks up and the screen actually goes black, not blue and you start getting this wierd warbling/pulsing tone through your reference monitors.....then by all means, use a 7 meter WC cable. You could probably reamp this racket and time stretch it to use as a techno loop.

;oPbeing much higher voltage and headroom with better frequency response and noise.

Well.....as long as the noise is better, I guess that's OK. I just wonder, better than what?

;o)

me out. GR11 looks more usable.

Looping is one of the things on my list. The GNX4 has looping features plus an 8 track recorder. I don't know if GR11's "Loop Machine" feature is better or not. The description is pretty sparse on their web site.

The GNX4's looping is simple. Hit the record button and off you go. Countdown is optional. Hit record again and it loops, or hit play and it loops but you can record your next part on new tracks (up to 8 tracks, although any track can be looped over with multiple overdubs so you can have many more than 8 parts looping).

It has undo and, if you like, a drum machine (plays back any MIDI file using internal drum samples). It can quantize the loop point to the nearest 8th note. What the GNX4 does not do is allow building up different sections (like verse and chorus) and switching between them on the fly. You loop one section and that's it.

I have the extra pedal for controlling looping, which keeps the main footswitches free for switching amps and such. Except that it still requires a bit of dancing on the main footswitches to get to a new song

ro XLR and 1/4 stereo outputs and that it can mix guitar, mic and two line inputs. I like that it uses robust CF media for recording, looping and playback, so I don't have to depend on a hard drive at gigs. The GNX4 includes very playable amp models and the FX are decent. Setup at a show is quick and uncomplicated (well, it was until I added a guitar synth to the rig).

I have a wish list for the GNX5, which I've discussed with Digitech...

Cheers,
-Jamie

from Ensoniq 4 years ago but I've never used it because I had trouble with the copy protection system. Hi Carol,

I just went through this a week ago when I upgraded from a G3 tower to a G4 Quicksilver machine. Even though I moved the hard drive containing the "authorized" version of 3.0 to the new machine, PARIS would not run. Got a message stating that "The trial version of PARIS has expired on this computer" or something like that.

I emailed off the Challenge codes to ID, along with some friendly words, and got a reply in about five days. So, they're still there. Be sure to send them your EDS serial number and 3.0 license code or they will not give you the response codes to unlock 3.0. I believe that you can rename your PARIS folder and reinstall 3.0 from the

direct music since I don't know what it is.
What is that anyway?

Any ideas on the hard drive choice of today?
I remember Aaron stating that even Seagate=20
may be going through some changes.

-----=_NextPart_000_0061_01C62859.1C12EAC0--I haven't used the Digitech JamMan.

Just looking at the specs: With an additional 2GB CF card it has the same max memory of 6ish hours. With the optional pedal you can switch to entirely different loops, but I don't know if you can do that on the fly without stopping the music. If you can, that would be a big plus.

OTOH the GNX4 can loop stereo tracks, the JamMan is mono.

GNX 4 is about \$550, JamMan about \$300. You get a lot for the extra \$150 - amp modeling, FX modeling, stereo XLR output, 8 track recorder,

expression pedal.

But if you already have that stuff covered, if mono is OK, and especially if the JamMan switches loops on the fly, it could be a useful box.

The JamMan comes with a 128MB CF card, I guess that'd be OK for the first week or so. :^) The GNX didn't come with a throw-away dinko card like that, so I went right to 2GB.

Cheers,
-Jamie

>Hi Rick,

I know about the .dll and it is sitting in proper folder and I even copied
it back to the emu/paris folder, but I still get the error. It's not the
EDS card, cause I see it in the devices... it's something with the software.
I am stumped.

I have been using Paris on 2000 for a few years. In fact I switched to 2000
before Matt released the final(beta) driver. I despise XP and hate it bloated
secret call backs to Microsoft... (monitor zdnet tech news for that info)
and it disgusts me that I have to talk to some person in India if I want
to reload windows and justify why I have to reload windows and assure them
it is not loaded on another pc. It's all phoney and ridiculous, so no more
XP for me.

Anyway, any thoughts to what might be happening (or not happening). I have
reloaded paris on a few pc's because of a new motherboard and never encountered
thi problem. *shrug*

just kick the kick's ass.....huh???.....wouldn't that be more fun

;oP

(actually, flipping the phase on one of the mic'ed cab tracks did the trick,
but I'll give your EQ settings a spin)

thanks,

;o)

Thanks DJ,
It's been a while for a post to have me really laughing, and just
when I thought I had done it all in the studio you prove me wrong.
Thanks for sharing the lesson with us.

>Lots of questions about the Focusrite Saffire.

- 1) How are the mic pres? I heard good and bad???
- 2) What about latency when monitoring/tracking?
- 3) How are the plugins?
- 4) How many plugins can you use with the on board DSP?
- 5) Is there any latency when using plugins with the DSP?
- 6) Can you cut tracks dry, then add the DSP effects later?
- 7) Any thoughts on the control software that comes with it?
- 8) Are there any drawbacks the the Saffire?

Thanks in advance!

JamesI used to frequent these boards back when Chuck still had it. Unfortunately, I have since moved on from PARIS. However, I still have 3 EDS cards, a 442, (2) MEC's an ADAT Module and (2) each of the 24 bit i/o. I am looking to sell them all. If any of you are interested, please e mail me here wayneatavericomdotcom Sorry about the phonetics. Anyway, would be cool to off load this equipment to you folks still using Paris. Thanks.

Wayne Davis
Avericom Communications
846 Route 73 South
West Berlin, NJ 08091James,

I received one around xmas time to use for recording my band live, but haven't had a chance to really put it through it's paces yet. I messed around just playing my guitar through it just to make sure it worked and was ready to go. I haven't tried the mic pre's yet, but have also heard both good and bad reviews. I did try out the DSP plug-ins with my guitar and didn't notice any additional latency. I was using the Cubase LE software that came with the Saffire and I believe I had the buffer set to 128. Anyway, the latency was low enough that I didn't notice it. That was with all DSP plug-ins engaged. I didn't find the plug-ins to be anything that knocked my socks off, but again, haven't really worked them. The comp and EQ were adequate. The verb seemed kind of cheesy. The guitar amp simulation was

not good. Each of the four inputs has one each of the four DSP plug-ins available. The software interface is ok, but I would have laid things out differently. It's nothing you can't learn in two minutes. The color scheme of the software version that came with mine was very difficult to read on the screen, but a download of the most recent version fixed that little bug. The on board DSP only works while tracking. They do include native versions of the plug-ins that can be used just like any other native plugs. Sorry I can't be of much more help at this time. If you're not in a big hurry, ask again in a month or so and maybe I'll have had more time with it.

Tony

Hey Tony! The saffire has the advantage of the DSP, the new Saffire Pro
26I/O does not have the DSP chip for effects, only software plugins: (
I'm thinking about getting the Saffire Pro 26 I/O.

Please let me know what you think.

Thanks!

James

Install UAD-1 cards on second computer.
Use any app like Cubase to host the plugins.
Send audio back and forth with ADAT optical.
Link Soundcards with ADAT Clock.
Done.
No MIDI, No ADAT Sync, No systemlink, etc.

"DJ" <animix_spam-this-ahole_@animas.net> wrote:

forth between two computers running Cubase. All RME ADAT optical outputs
would need to be feeding Paris ADAT inputs, thus, when mixing in cubase SX
only the ADAT outputs would still be monitored through Paris but the two
Cubase computers would need to be timeline synced to each other and
controlled by the Steinberg Houston controller. Then at final mixdown, both
Cubase computers would need to be slaved to Paris. No ADAT inputs between
the Cubase computers at all.
