Gets my vote....

pab<http://sonicstate.com/news/shownews.cfm?newsid=4627>Hi DJ,

Stick with XP you will waste you time for the next year with vista  
especially vista 64.

No audio or hardware or software work any better on vista and most  
works worse.

You got at least a year still before you should even begin to run the  
main studio on it.

If you want to play around with it in free time then put the OS drive in  
the removable tray and install Vista that way. Don't do any sort of dual  
boot. Just do separate drives.

DJ wrote:

> So I can use 8 GB RAM with Vista 64 while running 32 bit Cubase 4?.

> Hmmm....I guess the same would be true of Win XP64 then,eh?

Cubase will not use 4 gigs with most sampler VSTi in vista 64. The  
majority of the VSTi are not Large Memory address aware and will sti

not good enough for the amount of stuff you got.

Get the Thermaltake 700 watt Tough Power. Way better. The 500watts will be pushing to close to the edge.

Vista 64 is the only that will address 8 gigs or more. Vista 32 is no different than XP. 4 gigs.

Zero. Not at the technical level, not at the licensing level, not at the moral level, not at the community level, not at the pricing level.

I realize you probably don't make those distinctions, but I actually take offense at OS X being equated with linux. And I respond to DC regularly so I don't take offense at the drop of a hat.

If you would like to take a look at actual linux, Ubuntu 7 just released, Feisty Fawn. The install CD is actually a live CD, so you can boot off the CD and poke around a bit if you like. Beryl is installed but not enabled by default, and if you turn it on you'll have all the eye candy you could possible want, and not be stuck with a proprietary OS.

>Thad - have you used/are you using XGL/Compiz? I came across a video demo of it - looks like it blows away the eye candy of Vista and OSX, at least from what I saw in the video. A bit over the top for normal audio or business app use, but I'm impressed lots of cool workflow possibilities there.

If we were to get widespread audio app and driver support (and a few other apps/tools I would be dead in the water without), I would happily move to Ubuntu, but that's probably a long way off, if ever.

Is it possible to network an Ubuntu/linux system with Windows XP machines? I might consider dual booting my laptop just for the heck of it. I'm guessing it is, at least on the linux end...

Regards,  
Dedric
