If it's for someone else I usually suggest backing up the project to optical
media and throwing the whole thing onto a hard drive they can stash in a
drawer somewhere. With luck, if they need it down the road one of the other
likely won't be broken. If you want to be extra future proof you might do
an OMF export and/or batch convert the .paf files to .wav files.

cers I frequently collaborate with,
so working with them is easy.

For non-Paris projects or collaborations, I generally use wave files or Pro Tools files on an external Firewire drive. I use the same concept for long-term storage, but I remove the drives from the Firewire enclosure before storage.

CDFinder creates a nice small searchable database of all the contents of every hard drive and optical drive I have in storage. It works with both my Mac and PC storage media. Now that OSX has Spotlight, I can even search

did I use that Didgeridoo player in around 1999?

(859) 635-5762HI James,
Always funny to see something being news on the Mac that is so common
place on a PC. :)
Actually I've never figured out why the G5 was made to hold so few
drives internally for being such huge case.
Always seemed strange sense they deal with large media files.

(859) 635-5762Thanks Chris. Been playing around with Reaper some more tonight. Great
routing and ease of ues. I don't see any performance gains over Cubase 4
with my dual core when running UAD-1's, even in UAD-1 synchronous mode

(which then disables multicore usage). I also got my first BSOD with Reaper tonight....something that I haven't had with Cubase 4, ever. I really only want to be able to get low latencies when tracking with FX. It wouldn't bother me to stay win XP, especially if the 64 bit OS would allow more RAM and still allow me to use Cubase 4 and my Magmas

at 32 bit. I'm still not clear on whether that is possible. All my other hardware has 64 bit drivers available (CDR drive and graphics card.) I wouldn't mind at all staying at 32 bit if I could just track and mix at low latency.

I'd like to use as much of my existing hardware as possible. Maybe one of the old AGP based Tyan mobos with dual socket dual core Opterons? I hear those scream, though there are some issues with over 3 x UAD-1 cards, but I've also heard that having the cards in a Magma cures the problem and Magmas are something I've got here....in spades.

All I would need is the MOBO, the CPU's and 4GB ECC DDR 400 and I'd be good. I've got everything else.

I can find M7 capsules though from Neumann ...

Regarding Peluso well maybe the one I tried was one from the crap one...
I bought three of them and then sold them right away...

Regards,
Dimitrios

Since all hardware has to have 64bit compatible
drivers, I suppose I'd have to have a 64bit compatible Magma for all my PCI
cards in order to use this, right?

If that were the case, then I could still run Cubase 4 in 32 bit emulation
but I could access 8GB RAM? Is that correct?

TIAUbuntu didn't inherit only a package manager from Debian. All Debian releases
are named after a character in Toy Story. Sid, Etch, Potato, etc. It's just
mo

g with the ASUS mobo, =
I'll be=20
able to drop dual AMD quads or Octos in it if need be. The =
other big=20
advantage is that I can run my UAD-1's/Magma via the 32 bit PCI slot in =
either=20
one of them. With the Tyan, I can interface the other Magma with =
the RME=20
cards via the PCIX slot. With the the ASUS I would have =
to spring=20
for a PCIe interface for one of my Magmas (\$299.00) and use the =
PCIe x 1=20
slot. When 64bit OS becomes a must, I could still go with =
the=20
SBS PCIe>PCI chassis and likely interface with either of =
these=20
mobos.</DIV>
<DIV> </DIV>
<DIV>The Tyan has much more in the way of =
options. It's=20
a monster, but if it won't support future CPU upgrades, that's =
something to=20
consider. I hope it will, because the chipsets NForce of the two mobos =
are=20
different and this is sometimes a gotcha with UAD-1's and the TYAN =
has good=20
reviews with UAD-1's if they are "Magma'ed". </DIV>
<DIV> </DIV>
<DIV>This dual socket Opteron solution looks =
better to=20
me than the single socket Intel Quad option, perhaps more future =
proof, at=20
least for the short run.<FONT face=3DArial =
size=3D2></DIV>
<DIV> </DIV>
<DIV>OK guys.....shoot this down.....go=20
ahead, rock my world.</DIV>

mixing begins) while recording 20 live inputs at 64k buffers =
(1.5ms),=20
punching in and out at will. I can definitely live with 1.5ms =
latency.

The Cubase 4 CPU meter is bouncing along at approximately 50% usage.

I haven't configured the Control room mode for tracking just yet, =
but unless=20
creating a few busses is a substantial CPU hit, I may be able to =
accomplish=20
what I need here with what I've got right now.....of =
course, this=20
will require me not to spend \$2000.00 on a computer upgrade and =
that's never=20
good.

;o)=20

I choose Polesoft Lockspam to fight spam, and you?
