I understand you don't have the time Doug. I have a somebody in mind, but of corse it's a long shot. I needed to know, is it a matter of writing an ASIO driver? Would it be able to work with the MEC I/O modules? Would it also be able to utilize the EDS effects, what about the C-16?

JamesHey Doug.. Is that \$\$\$\$ dollar sign talk.?? :)

Has Apple implemented the *right click* feature in OSX so that a two button (or more) mouse can be used? I should have checked this last time I was at the Mac store here. Surely they have by now.

Thanks,

Deej

I knew about the sushi on the naked woman thing - had seen that somewhere before and thought it really creepy that the women had to chill themselves first.

Well, come to think of it, that would give you a place to put the onion rings....

Wait. That was just wrong. Sorry.

However, the "gut the fake body like a deer" thing is really just plain wrong.

pabl was just spec'ing out one of these.Macs on Apple's website with dual 2.66GHz Xeon coreduo CPU's, two 500G backup HD's and 4G RAM. (how they can justify charging over \$1k for 4 x 1G 667MHZ ECC RAM sticks boggles the mind)

Total price from Apple was \$4545.00 (without adding Applecare which I would definitely want to do given some of the experiences I and others here have

make such a mouse. Third party mice did and do work fine.

My Kensington mouse has three buttons: the two normal ones plus the
scroll wheel also acts as a button.

Cheers,

-Jamie

Saved a few bucks.

You may want to wait until April 16th to see what Apple is bringing out
for NAB. Might be 8 core time, and a price drop on the quads. Just a guess.

Cheers,
-Jamie

(859) 635-5762 Bill, Bill, Bill . . . how could you? You realize this is going to go
on for days now, people throwing their favorite scientists at each other,
spinning off into barely related left vs right sub-debates, and in the end,
everyone will continue to believe exactly what they WANT to believe.

That being said, I guess I'll get my 2 cents in: first
