such as Cubase. I will check again though.

Thanks.

Also, is it possible to send from Cubase with the 0404 by way of lightpipe
into the ADAT module on the MEC or are these different formats? OR would
I have to go out the Spdif's for digital xfers?

THANKS!!!!!!!!!!

How are you configuring this setup?

Do you break the mix in Nuendo up into 4 sub buses and send them stereo via lightpipe into 4 seperate sub mixes in PARIS?

Thanks,

bWe whipped out and took a cab back. Same walk though, from the Tropicana to the Hard Rock. I though we were going to have to stop and get a room for the night. ;>)

Dan,
Chuck's Paris Meter looks awesome. I'm not sure where you can get it these days though. I use it on the master bus to see how much = NoLimit/
comp/bus slam I'm really applying.

It would have been cool if it could be turned vertically to line up with the meters by the fader for comparison. Then I wouldn't have to use one meter in the first slot and one in the last for easy visual comparisons.

Tom

"chuckduffy" <c@x.com> wrote in message news:44a322e9\$1@linux...

Did I not do a stereo meter plug? I thought I had.

I was taught about the presidents proceeding Washington in high school, however I was taught the version close to the one in Wikipedia, which includes:

The origin of the claim that Hanson is the "forgotten" first President stems from a 1932 book by Seymour Wemyss Smith titled John Hanson - Our First President. Nevertheless, officially Hanson was the third presiding officer of the Congress of the United States, and he considered himself a successor to the first two men to hold the office, Samuel Huntington and Thomas McKean. He was the first to serve a full one-year term, and the first to formally use the title President of the United States in Congress Assembled.

Or this:

```
<a class="moz-txt-link-freetext"
href="http://www.johnhanson.net/">http://www.johnhanson.net/</a>
```

```
Gene
</pre>
```

</blockquote>
</body>
</html>

-----060007070903050001000403-->President Hanson also established the first Treasury Department, the
>first Secretary of War, and the first Foreign Affairs Department.

Didn't this guy invent the internet?

>Hi, all.

My Paris (win98) rig refused to boot the other day.

I bought a Gigabyte K8NS ultra 939 some months ago, with a view to upgrade at some stage.

It appears the time is nigh!!

I know many of you have successfully migrated to XP, and the K8NS is one of the fave mobos.

(I also have an Epox 9NDA3, in case I get grief with the Gigabyte.)

Are there any shortcuts that you guys could throw my way as far as which drivers, service packs, XP tweaks, I should or shouldn't use, in an attempt to preserve what's left of my hair??

I have four EDS cards, two MECs, (only one adat card), and four C-16's.

Or..... should I stick with 98 or ME???

I remember Kim having teething problems with this combo.

Did it pan out for you??

Thanks,

Kim #2. Forgot to mention I am running four 19" monitors, using AGP/PCI Nvidia Quadro cards.

This has worked well with my old ASUS p4 system.

Cheers.
