</DIV>

<DIV>MR</DIV></BODY></HTML>

-----=_NextPart_000_0036_01C7FFCB.8BAA8280--Hi Folks-

I need some hardware advice. I think I've wrecked my EDS input connector.

We're recording and editing in different locations, and I've been lugging

my

Paris rig all over the place. Tonight, while in a hurry to set up for tracking,

I forced the EDS/Mec connector cable into the EDS card at a bad angle, and

broke

a couple of pins. No problem, I have a spare and used it. No luck. When Paris

boots,

it now cannot find the Mec.

A closer look at the female input connector on the EDS card, shows some damage

too.

My question is, can this component be replaced as a separate item by any

computer

repair type, or is it not removable, and therefore I'll need to send the

card away?

Any help appreciated, we're wanting to keep moving on this

Couldn't the same be said of tube amps, basically?

>

Much as I love geekin' out as well, I don't think LED's are quite the future of professional band lighting - however they'll have a place in the future almost certainly. They're not bright enough and not directional enough. Mirror/reflective surfaces could probably fix the directional problem, and en mass maybe the bright enough. I love the weight thing, and built in DMX but once DMX is dead the fixture is useless... not so with my incan/halo stuff. Unfortunately, I can already see where DMX is a dying spec and running out of wind.

Cheers 'n' Good Stuff

AAJust as an aside, have a look down the bottom of the site at the site designers, and go to that site and open it up in Flash.

Pretty good.

I'd be interested to see specs/pics/demo the narrow LEDs. I know that LED's
are capable of better than what I saw, being a geek I sub'd to a magazine
strictly on LED tech and it was pretty fascinating stuff.
