also reasonably good acoustically. I

added a pair of Jensen line transformers before the NAD (and balanced wiring),  
so I can check mixes live through the second system. With a laptop and Timbuktu  
Pro, I can add last minute touches to my mixes remotely.

fine.

The idea might work better with a system that was closer to the sound of  
my studio mons, but this is an inexpensive approach that you may want to  
try, assuming you have access to a decent audio system.

Gene

>  
restart. Follow the instructions for PARIS XP installation exactly. After you reinstall the EDS, XP should find new hardware and install the EDS driver. If this doesn't happen, it is likely that you have a hardware conflict.

Another thing to try is to move the EDS to a different PCI slot as an IRQ conflict may be the issue. If that doesn't work and XP still doesn't detect the EDS, I would swap out the Matrox card for another card (mine's an ATI 9250 8x AGP) to see if that's the source of the problem.

After reading about DeeJ's troubles with Matrox I didn't even consider their products for this machine.

Hope this helps!

Mark

>Dude, why midi? Go Wifi and do a remote desktop to Paris (I'm making a bit  
of an assumption here that the Mac can do a terminal service across WiFi). I  
do this regularly on my internet desktop and Inspiron because it's better  
for me to stay central. Push the output of Paris to a mini radio transmitter  
and you should be good to mix in the car....

Ok, most interesting.

Here is a pic of one of the monitors on a good stand, (Chicago  
Speaker Stands, lead shot filled / MoPad) and it's associated 1/3  
octave FFT spectrum analysis response. (The subwoofer is off for  
both tests)

As you can see, this is very good response in any real-world situation. You have to spend huge sums to beat this response by much.

See the next post for what happens when you put the speaker on a desk.
