I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html> My client uses Logic and the Ensemble sounds like a good fit.
Any hands on
experience anyone?

Here's the overall scenario: We have an Apogee AD16X (16 channel AD converter), an RME card in the computer which accepts the Apogee's ADAT I/Os and a Motu 828 Mk 2 rack unit which runs in/out of the Mac via FW.

I want to improve the DA conversion, which is currently the DA in the Motu. I was originally looking at a UA 2092, a Benchmark DAC1 or a Prism DA2 - something along those lines for the DA converters, then I ran across the new Ensemble which is supposed to be a good fit with Logic.

Problem is I have no idea of the quality of the DA converters. Plus we don't really need the 4 mic pres (rack of Neves). Still, being able to integrate the AD 16X and Ensemble in the same routing software would be very convenient and we could maybe lose the RME and the MOTU altogether.

Any comments? Amen! A pithy observation.
E

For starters, it might be worth doing some reading on Quantum Physics. Matter isn't as it appears. It's largely probability fields more than actual solid stuff as we think of it. I'm not going to get into this here, but that's just one possibility that sprang to mind...

Not quite in service yet. It has to charge for 8 hours first.

But it's in the building. :o) There was a line at the store out on to the street. Business is booming in computer parts on the Easter weekend. I got it though, and it's unpacked. Now I've gotta load up some software and see what I need to tweak before I put it in service.

Thank you again to all the people who donated. Excellent work. And you'll note we've had no outages since the server has been taken off the UPS and plugged into mains. :o) And hopefully once the UPS is on we'll have even

less... or, well, not less than none of course, but, oh you know what I mean! ;o)

Cheers,

Kim.

(859) 635-5762 Well all is not so bad. I'm pretty fastidious about cables and connections so, natch, I didn't check the snake. But lo and behold by bass player was

"helping" by repatching some of the channels for us...!! d'oh. So we've got it down to 2 potentially flakey direct out's on the board.

after that we had a great day recording....

I actually have a beer fridge with a glass door and all, which has a selection of 12 beers, from all over the place, at all times, and I try and rotate which beers are in the fridge each month when I do my beer shopping. :o)

So I was thinking that surely some of you have some great beer suggestions for me. The difficult part is of course that boutique beers from north america can be pretty hard to find down here in Australia. Our range of European

beers is getting better, especially if you shop in the right places, but there's not that much from the U.S.

But if you have favourite beer, give it a shot,I'd love to know what it is.
I'll see if I can't find some of them and give them a go. :o)

I mean you guys must know something about beer. ;o)

Cheers,

>>Hi,

The eds transfer thing could be the answer to how Paris handles things.
Because I had a couple of eds cards stop working on my system and they were happily working on other (I had recently bought some) made me stop checking.

Until that time I had found that the 8,16 was the best candidate.

Paris worked with NO latency with VST !!

That's why senderella was working REALTIME.

The magic number for that is the 8 as first number which means that Paris works with a card transfer size of 8K instead of the normal 16K and as for card buffer count using 16 the buffer gets higher and the disk streaming is way better than 8,8 where the buffer remains as 8 as normal.

So the question is if the first number 8 instead of 16 makes Paris work too hard and produces much heat.

But with 8,16 transfer (8,8 can work too but streaming with too many tracks over many cards is problematic) we have Paris fly !!!

So senderella can work miracles with Paris like using VST and DX with auxes or submixing all your drumtracks and the processing as a whole etc etc.

So I need your contribution here.

If we want to take Paris to the next level we need this senderella (and not only) inside router to work at 0 latency !!

From there I can suggest a million uses to overcome with many Paris limitations...

Regards,

Dimitrios Thanks for the concern and the help.

Can't tell you how good it is to finally have that extra power. 3 or four cards (just for the extra effects) would be great!

Still, I'm beginning to think that a laptop and a Focusrite Sapphire Pro could probably replace my somewhat unwieldy Paris rig (it's gets moved around 8 times a year)... perhaps a supplement to it instead!

thanks, and sorry for the false panic,
Dan

>Hi,
If I'm to use a 442 and an MEC on a 2 eds card rig, do I need to connect
the BNC cables. I seem to remember something about needing an independent
worldclock source when there are more than 3 interfaces, but was unsure for
two cards.

Thanks,
DanGiven that I move my rig around a fair bit and that's driving me nuts (MEC
with 8 i/o, adat card, 2 eds cards, desktop pc, flatpanels, separate pres
and mixing desk, etc), I was thinking about getting a laptop and an interface.
assuming a quiet laptop, i could then probably also track in the same room

which would be very sweet!

Interface wise, the goal is really to have something capable to tracking acoustic guitar with at least 3 inputs. That said, might be useful to have the option for midi and extra inputs (you could just about track drums with 8). I think the focusrite sapphire pro is the best bet here (8 pre amps, adat, midi and spdif i/o, etc).

however, where i'm more stuck is the software front. since most of my ongoing projects are trapped in paris, it'd be very useful to have some kind of communicability between the systems. e.g. exporting projects. i'm guessing OMF works for protocols. but i've heard good things about cubase sx3. it'd be nice to have something that can handle softsynths, midi, automatic latency compensation, etc.

it'd be great to be able to transfer projects from paris to the laptop, do most of the additional tracking and editing in the laptop, and mix in paris (perhaps streaming out of the laptop into paris). otherwise mixing would i guess require rendering out from the laptop as 24bit wavs with the same start time, converting individually to 24 bit pafs (is there a bulk utility for this?) and importing.

i'm leaning towards sx3 and doing transfers via adat (or even d/a then a/d). a little worried about unnecessary a/d and the 20bit limitations on adat. is there a more elegant solution, perhaps?

finally, i'm pretty clueless beyond paris in terms of interface, so something logical, similar or relatively straightforward to learn (but not necessarily limited in features) would be great.

many thanks for any thoughts,
danHello,
Today must be my day and yours by the way...
The chainer still amazes me !!
See what I found !!!

You are a UAD1 and maybe 3 and 4 UAD1 users (DJ how are you ?) and you would like to put say 3-4 UAD1 plugins on one audio track like say a vox, maybe a 1176LN and then a cambridge eq and a dreamverb for the vox only and then maybe a limiter plug all UAD1 plugz, that would normally in your situation using FXpansion give you 4 time 16384 sample latency means 65536 sample latency or in ms 1486.08 which means around 1.5 sec latency, hoo...

This is much !!

Now if you have chainer you will be able to put at least !! (I can confirm later for more) 10 instances of UAD1 plugins on same audiotrack without adding latency !!

Means if you use chainer (come on buy ity ..) and the free spinaudio lite to wrap chainer you would have for all 10 uad plugz (if you are crazy enough)

4096 samples altogether means 92,8 ms !!!!!

That is what I call a DISCOVERY.

I for sure am extremely happy with this.

Now see what you can do with all these.

First using the compressor 1176LN you can put it to severe compressing where then you have a volume to bus it on OUTPUT.

Then if you try an eq you are eq'ing the dry signal and not the compressed

!, and then you have also a separate volume for the eq'ed vox, then add some dreamverb or Realverb and use the dry vocal again as feed !, then you have also the reverb volume as separate to add it on top of the dry, compressed eq'ed vox, all time aligned !!!

If you use two tracks with same vox as stereo you can also have a panpot for every UAD1 instance across the stereo field and the stereo reverb return and the stereo delays etc all these for 4096 samples as total, isn't that great !

With that latency you can work your automation better right ?

The how on my next post just curious to see if anyone is quick enough to respond that he likes what he reads :)

Regards,

DimitriosHey Dimitrios

Back in September you mentioned that Spinaudio could make a VST2ASIO for Paris

Any word?

 No they did not want to try it out eventually.
 It is like wormhole only two or three of use eventually bought this so we
 can not expect much of a Paris oriented support if the plugin does not qualifies
 for other users too.
 Regards,
 Dimitrios

>I did a job like this recently. I've got a 3 head Tascam unit here that is
in good shape so I do a bit of this now and again. A guy brought in a 20
year old cassette of his family opening their presents on Christmas morning.
His son was 5 years old and can be clearly heard singing and laughing on the
tape. Last year he was killed in a car wreck with a drunk driver down in San
Antonio. I think the guy's wife is sending it to MADD for use in one of
their TV ads.

It's heartbreaking to hear. One of the hardest jobs audio jobs I've ever
done.

> TCBDear DJ,
Thats nice, I would like to buy one but they ship only Fedex and that makes things scary...
I have to pay a flat fee of 150\$ just for custom services and then some few bucks more for tax.
I would like to find a place from where they can ship via US airmail like USPS and not any international courier or maybe find a similar in Europe...
Any clew ?

Regarding your questions.

Senderella can be considered as a 64 buss system.
You can occupy tracks 15 and 16 open two instances of senderella or chainer and then senderella and use that as returns.
On track 15 (you can use any submix !!) you have senderella bus 1 return and on track 16 you have senderella 2 return

Then you use senderella as send 1 and 2 for all your tracks.
To fully understand you have to open two instances of senderella send 1 and 2 so applying different amounts of send you can pan around the stereo field, got this ?

So you send all your drumtracks to 15 and 16 and then put a stereo DX 0 latency plugin like Waves C1, or most compressors out there and very nice ones too...

Also you can use your 15 and 16 as fedd for your external reverb !
ACROSS submixes...
Thats the beauty
better use your last submix 15 and 16 audio tracks.
Don't forget to use empty audio files on that tracks !!

If you wanna use a plugin with latency like rencomp (64 samples) or even UAD1 only solution thus far is to copy all drumtracks and then nudge the copied back and use only wet signal...

Regards,
Dimitrios

>Hey TCB!
It sounds like you've got it handled, but I thought I'd make the offer.
I've got a nakamichi MR-2, a dual Tech W-700R, same speck as the Tascam,
and a Sony. I'd do it for free.

>TCBHey guys, To clear things up !!
USING CHAINER you DON'T risk your PARIS !!
I just had my second thoughts on using the eds transfer string 8,16 which
is a complete different thing ok ?

Secondly you have to go to www.spinaudio.com and download the free Lite Spinaudio wrapper...

Then find chainer as a demo and try the UAD-1 scenario of no more than 4096 samples latency no matter how many UAD plugins you are using per track..

Chainer has 10 pages

You just open on each page a input module and then a UAD1 plugin

All ten pages are either summed to output or to another page !!

Possibilities are endless.

You don't risk anything again ...

You have though to have UAD1 or Powercore cards to have a true benefit...

For those not having that you can still use the ten Chainer pages as for your advantage.

Each page can have its own plugin (vst) like page 1 a compressor page two an equaliser (from dry signal not compressed !) page three a reverb (from dry signal feeding again) and then with separate volume you can either output directly or bus it to another chainer's page for a total plugin like a limiter !

You can ske questions , that means that I don't do all these just for me.

Regards,
Dimitrios
