A few months ago I bought a Virtua Via PCIe to PCI expansion chassis for my new MacPro 8x3GHz to run my PCI UAD cards.<BR>

The reason why the VV box doesn't work properly with more than one UAD cards is because of a weak powersupply. The included external PSU delivers 12V/3A and unfortunately the maximum rating of the internal (on the card) 5V step-down switching regulator (2596) is also limited to 3A. So using a higher power rating 1
