>>>>> JohnI don't drink much any more, but when I did I found Grolsch (Dutch) to be
the finest beer in the world.

I also like Heiny, Becks, St Pauli Girl and at the right time of year there
is a Carlsberg - I think it's called Elephant - that is very, very, very
strong, and especially good if you like falling down a lot.

As for American beers, I just don't like 'em, but if i had to pick one it
would be Miller. I tend to prefer sweeter beers.

A good Norwegian beer is Ringnes, but i doubt you will find that down under.

Another interesting dutch beer is Orangeboom, but it's gotta be fresh. Same
for all of them I guess.

The only dark I ever liked is Newcastle Brown. You can surely find that in
Oz.

Skol!

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html> I have a ProTools 002R and an MBox I use on a PC laptop for small overdub sessions in non-studio situations. It is real easy to consolidate the tracks and dump them in a folder on the firewire drive for an easy import into Paris. The bonus for me is that I end up in a lot of ProTools studios for tracking dates, and it has gotten me a lot more fluid on PT for these dates.

and produces much heat.

> over many cards is problematic) we have Paris fly !!!

I'm not quite sure I understand what settings would make Paris fly but create too much heat. What would be the fastest possible Paris settings? My ED cards are all exposed to the open air in a machine room with a big fan blowing air over them. Unless the heat is sufficient to actually melt the card in the PCI slot, I doubt it would be an issue for me since there is no case. In the attached picture, the EDS cards are on the very top.

Dear DJ,
Nice thought I never thought of taking apart a case...

The magicnumbers are
EDSTransfer 8,16

The first number makes Paris run fast enough to have a 0 latency senderella working and the second number ensures that the disk steraming can work reliable as opposed to havinga transfer of 8,8
