>Neil,

I think the "@" in the link is when you want to include the user and password within the string so you don't have to type it again at the entry point. Otherwise, just paste ftp://manitou.serveftp.net/ into IE and it will ask you for the user and password (xmas/xmas). But, for some reason, the passive mode still needs to be turned off in internet options in order to get in. Still trying to figure that one out.

Rob

>That's a good point, though I came into Paris via 25 years
of analog recording (still own an Ampex 1100 16 track and an
Otari 24 track). Paris came the closest to what I had been
hearing, even at 16 bit. I mulded out to tape and Paris and
compared them, and hardly ever use tape anymore (though more
from resistance from clients).

God bless GRP :)

I may be able to find one here in Greece.

What would you need Ultramatch or ADA-8000 (I have one of those)

Let me know if Greece is an option for you.

Regards,

Dimitrios

Would you believe that I saw somewhere (can't remember where) that there
was service providing mastering of MP3's? I guess if you have to place things
online the best quality is necessary, but geesh!!!.

TyroneYikes ! It's not only what he plays..but it looks so EASY....the other band
members might as well go to McDonalds or something while this kid plays....

>I know some of you guys are really gurus and I can't seem to find the
info I need by googling, and my winhelp seems to be missing...

I have a laptop that I'm (sigh) forced to share with a couple of other
people here at the studio. Problem is, I use this sucker for everything
including financial stuff, which I'd like to keep private.

So, I've set up a user account without a password for the other guys.
Now I want to hide my E: drive from them, so they can only access C: and D:
I'd also like to stop them from using some programs, as some info will
be viewable.

I right-clicked and went to "sharing and security" but the do not share
box is greyed out in every instance.

What am I doing wrong?XP pro or Home?

You need pro to do file level security (kind of, home allows a little
but nor full control). Also need the drive formatted NTFS instead of
FAT32. If it's not you'll have to convert it.

levels. In a way, it's like Rain Man, if you know what I mean. Now comes the hard part. They have to learn everything else about music, and really apply themselves in the next few years to levels of playing. The *worst* thing that can happen is adults fawning over them and praising them to the sky and comparing them to the greats, and getting them record deals. Yet this is usually what happens. When it does, the prodigy disappears and is never heard from again. In classical, if you have a great teacher, they keep your nose to the wheel, and let you know that you have along way to go. The parents will be smart, and reserved with their praise and exposure of the child to the public. Then you can end up with another Mozart, but it is rare today; fame is too much of a drug to most people. I've seen these kids end up featured soloists with major symphonies and I've seen them disappear. It's all in the parents and the teachers.

It's been quite a while since I've checked in here.
I'm glad to see the group is still alive and well.

Well, it is time for me to upgrade my studio machine
so I did some searching for what to look for / avoid
in modern motherboards.

I saw a discussion back in July initiated by Kim on
whether PCI 2.3 slots would support an EDS card
(5V supply was the unknown). However, there was no
final conclusion.

I'm mainly considering an nForce4 based MB which
nVidia claims is "5V tolerant". Has anyone been brave
enough to try Paris on one of these motherboards?

If it matters, I was specifically looking at the
Abit AN8 motherboard running an Athlon X2 processor.

Thanks!

-RohdeHi All

I received some wav files made in Nuendo and some of them are not
displaying the waveforms in Paris

Any thoughts as to why this might be happening

Remember the Seinfeld episode where Kramer couldn't get any
sleep because of the new chicken place across the street with
it's flashing red-lit sign?

I imagine it would be somewhat like that. lol

NeilCheck the properties of the files to see if they are
Broadcast Wav's... if they are, stripwav won't help. You
will need something like Wavelab to batch process the files
from BW to PAF (or standard wav).

David.

But I'm beginning to realize, especially in the face of new, cool plugins that'll never work in Paris (like the Waves Transform Bundle, among others), that I'm eventually going to have to switch to something that actually has ongoing development and support.

So what are my fellow Mac DAW users finding satisfying after Paris? I own Digital Performer (w/ an old 2408) and Protools LE (w/ Digi 002). Neither seems as intuitive as Paris, but I suppose I'd get faster if

I immersed myself in one or the other. My big concern is sound quality. I haven't found either DP or PT LE as satisfying to listen to and mix on as Paris. I know I've lost business for not being a Protools studio, but PT HD would cost a couple of arms and legs.

What to do?

GanttThanks again Jeff. Everything working fine now.

 >>Hi,
 I have almost finished my project mixing and when I try to put a stereo native
 effect on any audio track on any submix when I try to save I always get assertion
 failed and cannot save either on same name or other...
 The problem is that I want to use stereo effects as I did before but don't
 know why Paris doesn't let to...
 Regards,
 DimitriosI suppose it would depend on your style of mixing, but I've been really
 happy lately using DP 4.6 and PARIS. I track and mix first in DP to take
 advantage of any virtual instruments I might want to use, and any plugins
 that won't work in PARIS. I'm using a MOTU 828 Mk2 firewire interface that
 actually sounds pretty good. It doesn't add any character while recording,
 but that's what I'm wanting at this stage. This first mix is basically just
 a "get it close" type mix. I usually don't use any EQ plugins in DP opting
 for the nice PARIS EQ's instead. Once I've got things close in DP I freeze
 all the tracks (equivalent to rendering with plugins in PARIS). Then I
 export the frozen DP tracks as 24 bit .wav files. Then I boot to OS9 and use
 SonicWorx to convert the .wavs to 24 bit .paf files. Then I open PARIS, add
 the audio files, and do all my editing and final mixing in PARIS. I still
 like the editing in PARIS, I suppose because I'm so used to it. Right now
 I'm doing this all on one Mac dual processor G4 and dual booting. I'm
 getting a G5 soon though and dedicating the G4 to PARIS only. I'll just
 share a firewire drive between the two. This will also let me use the G5 as
 a virtual FX rack when mixing in PARIS using external sends. Anyway, I know
 this approach is pretty convoluted and might not work for everyone, but it's
 my way of having the best of both worlds so to speak. The modern features in

DP and the great sounding mix bus, EQ and easy editing in PARIS. Not to mention the great PARIS plugs like NoLimit, BarbEQ, etc.

>I'm using Logic "Pro" 7.1 on a dual 2.5GHZ G5 running OSX. Logic would be "Pro" if it didn't crash. Of course OSX doesn't go down when Logic does but it's still an interruption to restart Logic when it happens. Some of that may be a hardware problem with my rig, I'm tracking down a possible HD glitch right now.

The other thing about Logic is there is a bit of a learning curve. Most things are straight forward but a few things are obtuse. You might give yourself a few weeks to come up to speed, depending on what your needs are.

Those negatives aside, Logic has come a long way and it rocks. It has an incredible selection of useful plugins for convolution reverb, compression, limiting, distortion, EQ, etc. It also includes a good variety of excellent virtual instrument/synth plugins, and great third party plugins are readily available. It really is a virtual studio and I'm very happy with the tracks I'm producing. C'mon over and check it out if you're ever in the neighborhood.

Everything is automatable. Mixers show as many tracks as you have. The MIDI features are comprehensive. Logic can play video files for film scoring.

The G5 processors support so many plugins and tracks that I rarely have to "freeze" anything, it's all live. But if I ever need more CPU overhead, freezing a track converts a track and all plugin operations to an audio file. It can be unfrozen if any editing is needed. There's also an option to network with another Mac to farm out CPU time but I've never needed that with the G5. BTW, the new dual core dual processor G5 box is somewhere around twice as fast as mine. Whoa.

If at all possible, you should try to mix on each of the systems you're considering and see if the sound pleases your ear. The i/o you choose will also matter. Like Tony I'm using a MOTU 828MII which has been a decent sounding, reliable piece of gear, and there are many other options to consider. You can combine several i/o devices if you need to expand to additional channels. If you need flying faders there are several choices with or without built-in i/o.

Cheers,
-Jamie

>I don't check this NG for eons. Then I drop by on a whim and no flame wars, no calls for Edmund to be covered in cattle blood and released into a cage filled with starving ferrets, no lectures from Don about intelligent design? Sheesh.

Seriously, hope all is well. I'm beaten down at work and trying do simple things my brain can still manage, like look at newsgroups where I once spent most of my time.

TCBSample rate was 44.1 and the bit rate was 24...I taught my friend long ago to disable the "broadcast wav" thing so this is something new...and it's just on three of the 10 tracks...weird

I am assuming you can "hear" the audio.

David.

Still in New Haven, working a straight job again, though I write the odd
piece for Electronic Musician. Playing in a band too, which is weird. I tried
to upgrade the drummer and patch the songs but I just took a beating instead.

How's the move going?

> Those negatives aside, Logic has come a long way and it rocks. It has an incredible selection of useful plugins for convolution reverb, compression, limiting, distortion, EQ, etc. It also includes a good variety of excellent virtual instrument/synth plugins, and great third party plugins are readily available. It really is a virtual studio and I'm very happy with the tracks I'm producing. C'mon over and check it out if you're ever in the neighborhood.

>

> Everything is automatable. Mixers show as many tracks as you have. The MIDI features are comprehensive. Logic can play video files for film scoring.

>

> The G5 processors support so many plugins and tracks that I rarely have to "freeze" anything, it's all live. But if I ever need more CPU overhead, freezing a track converts a track and all plugin operations to an audio file. It can be unfrozen if any editing is needed. There's also an option to network with another Mac to farm out CPU time but I've never needed that with the G5. BTW, the new dual core dual processor G5 box is somewhere around twice as fast as mine. Whoa.

>

> If at all possible, you should try to mix on each of the systems you're considering and see if the sound pleases your ear. The i/o you choose will also matter. Like Tony I'm using a MOTU 828MII which has been a decent sounding, reliable piece of gear, and there are many other options to consider. You can combine several i/o devices if you need to expand to additional channels. If you need flying faders there are several choices with or without built-in i/o.

I've had that happen before, a few errant file exports by a protocols guy.

I'm going to get him to resave them and drop off the new files and see what happens.

I'd try them in wavelab except my second computer is on loan for video work of my 50th B-Day Bash

You do know that Avid owns Pinnacle that owns Steinberg right? Why

design an audio engine when you can buy one?

And the PARIS or PT debate is OOOOOLLLLDDDDDActually, Yamaha now owns Steinberg.

David.

Right click the e:\ drive in explorer, then the permissions tab (as long as the drive is formatted NTFS) add your account with full control, then remove everyone else.
