ing resembling the sound from a tiny  
1" transistor radio speaker, on a dead battery. Crackly, faint, no bottom,  
no sound to speak of. The bandleader went pale. The drummer said, man this  
amp works great! or at least it did when I used it last. Maybe it's just  
got a dirty pot.

When did you use it last? I cautiously inquired. I furiously twirled the  
pots, which didn't even respond with crackles, pops, anything. Tried plugging  
in to all the channels. Nothing.

Oh, it was a few years ago. And, come to think of it, I loaned it to someone  
after that, and haven't used it since.

Well.

The guitarist said he had a tiny amp in his car, his spare amp. It was a  
20 watt MXR or some such, and I plugged all my stuff into a small mixer and  
then into that amp, and managed to play the whole gig without any further  
complaints.

I'm gonna take that Berringer right over to the repairman! said the drummer.

It would make a good boat anchor.

-steve
