> Cheers,
> Kim.I've been thinking that maybe we musicians and engineers have been looking
at this business all wrong. We charge for what we do rather than what might
happen to us tomorrow. Tsk, tsk, tsk. How shortsighted we are! For
example, in the oil industry, if your customer goes on vacation during the
summer, the price of a barrel goes up. A hurricane blows through the Gulf
of Mexico, the price goes up. Not because it has to, but just because it
might slow down the production rate by an imperceptible amount. From the AP
News wire on Katrina:

"Oil refiners said damage to their equipment in the Gulf region appeared to
be minimal, and oil prices dropped back from the day's highs above \$70 a
barrel" (Yahoo/AP News).

Brilliant! This is the beauty of the law of controlling supply and
demanding demand, albeit, shall we say, a "slightly altered" approach to the
Economics 101 version once boringly named the law of "supply and
demand"[yawn], which was naively reactive. So, based on this more forward
thinking, proactive method of speculative pricing, my company's rate went up
by \$5/hr yesterday because I was looking at some sweet mic pres (they were
pretty sweet, not really sweet, or it would have been \$10/hr). I thought
about lowering it back down again when I didn't buy them, but nobody who
matters asked why (and nobody else really matters), so I figured, why
bother? Next week I think a client might get in a jam and need an extra few
hours to complete their project - rate goes up tomorrow! Today my rate just
went up because I might need a new car someday - probably a hydrogen fuel
cell car. I'm sure the Flying Spaghetti Monster would approve whole-noodly.

;-)

Dedric.....hmmmm.....I like this!!! I probably need a new API console and
a new studio building to put it in.....and a Bosendorfer for the 4000 sq
ft. live room. My rates just went up to \$1000.00 per day.

Take a number andhey stop cutting in line!!!!

;o)

>Yes, yes, yes, yes, I know, I know, I know, I know, I'm late to the party.

I always knew how good it was but just never forked out the cash for it because
I figured "How often do you really have to reload your machine?".

This new box though with all the HDD space in the world got me thinking that
"If I want to have 6 partitions all with different purposes all running XP,
it's going to speed things up a lot if I can copy an image from place to
place...".

And OH MY!!! How FAST is it?

I've got a clean Windows XP install, with all the latest drivers, Service Packs, Windows updates, Acrobat Reader, WinRAR, Video Codecs and Firefox. Just my basic beginners install to which I can add the optional applications. I don't know how big it is. Maybe 3-4 Gig I'd guess.

So I ghosted an image of the whole thing, with high compression. About 5 and a half minutes.

I start ghosting it on to other partitions on the other SATA HDD. I can create a whole extra boot of Windows, complete with all the updates and basic essentials loaded... probably 5 hours work, and it takes about 3 minutes. 3 minutes and the whole thing is on another partition.

If I'd realised just how quick and easy it is, I would have bought it years ago.

This thing is better than sliced bread. I mean some people make a big deal about sliced bread, but honestly it doesn't take hours to slice off a peice of bread. Loading windows, drivers, updates, accessories... now that takes time.

Anyone who doesn't have Ghost, honestly, go get it NOW! Especially if you have a DVD burner, because you can image your drives to DVD and load them back up at will. If your system goes crazy during a tracking session you can load up a working install in maybe 10 minutes and you're back.

I feel stupid for not getting it sooner. At least I wont be wasting my life any more.

Cheers,
Kim.i'm gonna go for broke and charge \$10,000,000.00 per day to cull out those who musically suck and those who can't pay and suck musically.

damn, wish i had thought of this years ago, i'm ordering that new car right now.

Looks like this latest attempt with new HDDs and a different copy of XP has
done the deed. 3rd day in and not a BSOD in sight.

Now moving on to loading Paris, and, well, everything else that's needed...

Cheers,
Kim.Not sure. Aaron might know.

Anyone doing this?
I would think it would kick the shit out of burning test CD after CD.
Any suggestions?

<http://www.electronickits.com/kit/complete/radi/canux300.htm>Well, when the church moved into
the old Compaq Center in Houston (Where the
Rockets used to play) that tells you what kind of budget they have. :)

I do see him post on the Nuendo site once in a while.

>Kim.That's very cool. I wonder how easy it is to override the FCC imposed
distance limitations, When we were kids we had a pirate FM station that
broadcast for almost a mile with a Radio Shack kit.

It really has a different purpose than replacing a burned CD. I always
thought it would be cool if someone made a plug-in that emulated the
brickwall limiter and pre-emphasis EQ of commercial radio stations, with
presets for different types of music. Then you could really hear how your
mixes will play on the radio.

>Anybody got experience with this? I've ghosted C drive (containing a relatively clean XP install) on to a bunch of other partitions which will serve different purposes and have different applications loaded.

I haven't explored the whole deal yet, but I have a couple of errors coming up on N drive, which is one of the XP installs, and I'm wondering whether N drive has its wires crossed because it thinks it should be C drive.

The reason I'm thinking this is that Firefox on N drive was still set to download all files to the desktop. I downloaded something and found it wasn't on the desktop. Upon exploration I found it had been loaded to the desktop on C drive, rather than N drive. Hence I'm thinking that if Firefox is still pointing at the C Drive desktop, how many other things are still pointing at C drive?

Is this usually an issue? What's the deal here? Should I be able to Ghost a partition to a different partition and boot to it, or is Ghost mostly only useful for saving a given setup and restoring it on to the same partition?

Seems there would be a lot which Ghost would have to change in an OS to move it's operational drive letter. The whole registry for starters...

Cheers,

Kim.LOL man.... I was way late to that party, 'eh?

Honestly think I'm slipping back a little on Paris things, just having other priorities and limited brain RAM to put them these days.

How goes the band?

> Cheers,

> Kim.Man.....I've had a real left brainer today. Intense stuff involving lots of detail work using all of my analytical/logical/rational synapses. I'm so mentally spent that I almost feel hung over.

Now I'm home, I've taken a bit of a break and I've got a couple of songs to mix tonight and I'm just totally flatlined as far as switching gears into a more holistic frame of reference. This has to be the dominant head space for me when I mix.....looking at the sum of the parts and feeling/listening my way through the process, otherwise I'm not getting the big picture and my mixes just don't come together.

Maybe trip across the street to the hot springs????.....trouble is, I'm already tired and I get so relaxed over there that I'll probably just go to sleep when I get home.

Bitch, bitch, bitch.....I just watched the news and saw the devastation on the gulf coast. Relatively speaking I don't really have any problems.Man.....

You have a hot springs across the street?

We had illicit access to an abandoned hot springs-centered resort, up near Asheville, NC, in the Black Mountains. We'd sneak in and bathe in the silt-filled old marbel-lined pools, the water hot as hell itself in the middle of a snow-bound NC winter, then go home and drink wine beside the dogs by the wood stove.

I don't feel that good very often. There are few things that I el that good: a week at the beach, maybe; Cuervo Gold and fine Colombian, that sort of thing, maybe all of the above....

I would be in those hot, mineral-laden waters every damn day.

I can't make music without that feeling. However I get it.

I've got a killer mix happening right now. I set up a second reference monitoring system in the CR last weekend (an old Sony system I bought at Montgomery Wards back in '95) It's *everyman's halfway decent sounding cheap home stereo system. the mix is translating equally well to this and to my NHT A-20/B-20's so I'm in the slot

Time for a soak in the springs/lithium salt infusion ;o)....tomorrow is going to be brutal as far as work goes. Running your own business(es) is a bitch, especially when you've been out of town for a week and are playing catchup.

;o)

>Kim,

Are you saying you can see the different operating partitions with letters on the active partition you're working with?
If so, you need to do some extra "operations" if you're using the installed harddisk(s) for different operating systems on different partitions. First of all you need to have one of the operating partitions active(as you already have) and hide all the other operating systems with a kind of program like "Partition Magic" or "Partition Commander". To then start the different partitions, you need a boot program like "Boot Magic" or "Boot Commander". If the things are done correct, you will then only see the

active partition as the C:drive and all the other partitions with operating systems will be hided without any letter at all like a N:drive.
(If you're using "Ghost" to copy the active partition to other partitions, if I remember correctly, the new partitions will show up with letters, but will not be active but can give conflicts.)

For me it seems that Firefox, as standard, allways will use a C:drive as the choice to download at. But I think you can manually set it to download where you wish and remember the last choice, as Explorer. Maybe you can set this up from one of the menues?

Regards

Erling

PS: Been in Denmark and Germany for over a month so I havn't been here at all for that period.

>I'm tinkering about getting into a SBC/Magna PCI expansion chassis(32 bit of course)..

I currently have 4 EDS cards, 1 RME digi 96pst. I want to add (2)UAD cards..
My DAW PC has 5 slots, in-which 4 would be open with the Magna Chasis..

Questions:

1-Whats the best slot for the Magana PCI card (in DAW PC)

2-What order of should load the magna PCI slots in (Paris EDS, UAD)..OR.
Do I need to put the UAD's in the DAW PC..??

Thanks in advance as always...)

LaMontI know this has been asked before but I never paid attention as I never thought I would be in that situation but.....

I now have about 60 different clients lined up to come in and track about 3-5 songs each. May end up mixing some but others will go elsewhere. Anyway, I want to be able to give these people some type of media - Im thinking USB external drives at this point - to take with them and allow them to walk into any studio, anywhere in the country and be able to mix their stuff. Im currently just dealing with WAV files and everything has been stored on either my harddrives, backup tapes or DVDs.

So far Ive only burned 2 track CDs and that was it. Now I have to be compatible with Im assuming Pro Tools?

What recommendations do you guys have for this situation? What format should it be in and will Paris do that?

Will I have to purchase Protools to be able to do this?

Thanks for any suggestions!

MikeJohn <no@no.com> wrote:

>Why are you installing XP multiple times. Just put your ghost image

Yes I am. That's what I'm saying. Obviously I'm not clear.

I've done a single install of XP and ghosted it onto 5 other partitions, but the problem is that the other partitions aren't called C:\, but the Ghosted image has a whole bunch of references to files on C:\. All the registry entries, all the program shortcuts, and who knows what else, all points to C:\, so if I boot the D:\ partition for example, it's using half the files off the C: partition.

I think Erling has the right answer though...

Cheers,

Kim.Mike,

the external drive (usb/fw) is good solution. As well as, recording everything in wav file format. Or Record 24 bit in Paris, then batch process in wavelab into 24 bit wave files

Yes. I think you were right. I've managed to find 3 different freeware boot managers all of which cause the currently booted partition to be called C drive, hence removing the issue. I've tested the partitions and the issues I was having go away when I use one of these.

I'm still deciding which to use, and I've had a couple of little issues with the boot managers, but there are options there. I've tried two of the three. The second one (which is currently loaded) is good, and allows single button booting, and password settings and the like, but on one occassion it didn't boot and I had to restart, so it's on trial to see if it glitches again.

But I'm on the right track. :o)

Cheers,
Kim.Anybody got a good one up their sleeve?

I'm currently testing a couple. Thought maybe someone had the secret...

Cheers,
Kim.<http://www.hobbytron.com/LowPowerFMTransmitters.html>

this country doesn't lie in terrorist attacks to large metropolitan

cente4rs, but to the energy infrastructure. What we're seeing right now is nothing compared to what would happen if someone popped a nuke in the Houston ship channel and in the refinery chain between Baton Rouge and New Orleans.

It's been over 20 years since we built any new refineries....why?????.....environmental lobbies here have made it cheaper to do it overseas where the oil we buy is being produced because we can't drill for that here either.

In the meantime, there has been no real energy policy that encouraged investment by the private sector.

We're getting ready to pay the going price in a global marketplace. Welcome to European gas prices. Here they come. Fill your tank tonight. It's going up tomorrow.

This, of course, is all hindsight. What we're really paying the price for is a failure of the private sector and the government to be able to coordinate an energy policy that is truly effective. The government couldn't do it alone. Bureaucracies are neither effective, efficient or creative. Private enterprise goes where the money is when the money is a sure bet.

All bets are off now. Time to wake up. I'd rather invest the money I'm paying in taxes to solar and hydrogen technology research. Think I'll be able to write it off???? F*** no!

>Brandon,

I would love to be able to listen to my mixes, broadcast from my DAW to the radio in my car. What a great idea! I was checking these out. the most affordable one has a range of 30' *line of sight*. Walls and metal can reduce this substantially according to the specs. However, the FM38-T looks like a pretty substantial beast. There is no info on what kind of input it uses, but I'm guessing RCA. Do you happen to know?

Think of all the CD burns you could save. Between the media savings and the time it takes to burn CD's again and again, at \$200.00, the FM30-WT would pay for itself PDQ if it's got a decent range. I would need about 50' and

for it to be able to transmit through a metal roof as my studio is upstairs, the roof slopes between the back wall and my driveway and/or garage and the distance to the car parked in the driveway is going to be at least 30' and probably a bit further.

Put a little dead air up front to give you time to get to the car and set the song to loop and you could get a real good idea of where you are with a mix as far as vehicular playback goes (and probably ruin some assholes day who is driving down your street with thunderbuckets cranked full out if you knew the band this station was using and you wanted to *substitute* his Gangsta' mix for a good dose of Karen Carpenter or the Osmonds).

Of course, this is illegal so I would never dream of doing it.

;oP

> It works for some folk, not for others. Drunk-ness, that is....

I loved that town when I was there....but that's another story.

I think that sweet, beautiful place could have been slightly better prepared. Sometimes being the most laid-back place in the country can wind up bitin' you in the ass...

Please, I do not mean to offend. I am a poor person with no pretentions. I just notice how some folk are a little more pro-active than others, that's all....

It breaks my heart to see all that suffering. I just go numb. And angry.

We have been borrowing (and betting) against our futures for a long time.

At some point that note will come due.

It may be today, it may be tomorrow. But it will come due.

I guess it's stupid to hope that it ain't due to come due quite yet?

>Ditto here too. My post about studio rates was my humorous way of glossing over my anger with the oil industry. You guys are right, we are on borrowed time with oil as a fuel source (industry aside), but even so, I found it quite interesting that other similarly affected industries had a very different response: a seafood supplier (some of our seafood in the US only comes from the Gulf) said it might affect prices later down the road - key words "might", "later". Another supplier said he would absorb the cost increase if there was one, rather than pass it along to consumers.

The oil industry however raised prices *before* Katrina hit. That's price gouging and greed, pure and simple - not speculation. Maybe I've oversimplified the situation, and I know Katrina had a big impact on the industry, but worldwide, oil companies have the rest of the world over a barrel, figuratively and literally.

To add to justcron's link, some neighboring hotels were charging \$199/night for \$40 rooms. This is beyond sad. It's despicable and barbaric.

Jimmy - you aren't the only one hoping it won't come due just yet. To be honest, I really wonder how we'll survive if we hit a severe energy crisis. It would likely cause complete economic collapse. I pray our fears are unfounded...but maybe that's the wrong prayer. Today we took our 4 yr old son to his first soccer practice - first team sport for him. Beautiful day in Colorado...but I have to wonder what kind of future he will have.

Analyst say tonight gas could exceed \$4/gallon here. No way am I buying

another gas car. There was a guy in Manitou Springs giving holding a training night on making alternative diesel fuel from common, abundant materials (garbage?). It involved building a pretty simple sounding converter from basic materials, and he claimed it worked very well and burned clean. I'm cool with dropping banana peels into a hydrogenated combobulator system.

>And it's small consolation to hear that when oil reaches \$80.00 per barrel, it will be at the same relative price it was in 1980 if inflation is taken into account.

Alternative fuel sources are more expensive and less efficient right now than oil and natural gas....it's going to be a break even situation PDQ. In the meantime, we're going to have to do something drastic.....either drastically change our lifestyles/energy consumption or drastically change our position toward exploration/use of domestic fossil fuels. The former needs to start happening.....so does the latter, at least for the short term while we adapt to the former, perfect alternative energy technologies, build nuclear plants and plan for the end of petrochemical lifestyle as the supplies dwindle. Thing is, about 90% of manufactured goods are petroleum based. I guess I'll have to wire my studio with hemp twine and coconut shells.

> That's what I'm not sure I understand (having not seen the relative figures). I've heard that said about inflation, but it doesn't seem to coincide with other prices and wages. Oil jumped from about \$14/barrel to \$37 or so due to the Iran/Iraq war from 1978 to 1980. That was a 160% increase for that time, and the equivalent of \$86/barrel today. However, that was an event spike, not a normal inflationary increase, and it spurred a push in the 80's for more energy conservation (i.e. consumption went down, relative to growth by something like 20% didn't it?). Inflation hasn't risen by that much since 1978. I look at salaries when I graduated college relative to now (same profession, starting salary) and those also haven't increase 3 fold - actually not even 2X. By 1986/87 oil prices had dropped back well below 1980 prices (close to \$14-\$20/barrel). In looking at the general 20 year price trend, there isn't a 4X increase in any market I know of. Wasn't a gallon of mild about \$1.00 around 1980? It's \$2.79 now - 279%. We are looking at an over 200% increase in oil prices in a year, and 4X since 1986 (7X since 1998, but that low wasn't a norm). With gas now predicted to top \$4/gallon, that's well over 200% in a year at the pump too.

In 2004, Principal Global Investors' economic report cited the rise to \$44/barrel as a disruption (comparing the 1973 to 1974 rise of 269% as a "shock"). They did however propose that the resulting economic recessions of 1974 and 1980-81 were a result of spiking interest rates, not the oil price spikes. I could see the same happening now. However, it seems to me that interest rates are set as a reverse reaction rather than stimulus proaction during economic burdening events (oil price rises, etc). While investing takes a hit during low interest rates, housing booms. When interest rates soar, housing crashes, as well as some businesses. Loans are

more of a burden on the economy than investing is a boon, at least in my unqualified opinion. That may be a bad indicator of what the economic basis is, but it seems more of our reality than not.

We seem to be on an exponential increase with oil now spurred by events rather than inflation. Such a spike is similar to '74 and '80. I just hope the results aren't worse.

Regarding alternative energy - you are quite right (and I also know you are more informed about the oil industry than I am) - we do need to bite the bullet and start moving to other sources. I know there are hydrogen fuel cell cars on the near horizon - some manufacturers have started previewing them in ads, but obviously fuel sources and distribution are a huge limitation. I'm not psyched about extending the life of nuclear power (esp. into cars). It isn't a long term solution. IMHO, the long term risks (waste disposal more than meltdown risk) are just as high as depending on oil.

At least maybe this rise will get us moving towards something else - anything else. My mountain bike is due for a tune up anyway...

Regards,
Dedric

>My problem (well, one of the lesser ones anyway):

I used mild EDS compresion (in the Aux) to tame the loud

toilet paper tube (a rather large one). Is this possibly an issue
due to mixing both compressed / uncompressed signals? If so, is
it somehow normal procedure to insert the compression into the

more sense rather than blending wet/dry signal in the aux.

I recorded live tracks (piano, voice, cello, flute) together

grade level directions would be much appreciated.

TIA,

DaleDear Dale,

We were talking about comprssion in aux some posts before...

If you wanna use compression on a vocal track just put it as insert on eds
slots so you will have only wet compressed vocal output.

If you wanna mix uncompressed and compressed (mostly used for drums+bass)
please read my previous post.

"Compressed drumtracks along with uncompressed"

I hope this helps a bit...

Regards,

Dimitrios

Kim.By the way, Erling was right, and I've got it sorted now, so it's all a non issue. I just needed a boot manager which then automatically causes whichever partition I boot to be called C drive, hence I'm never booting any other drive letter. Hence the fact that everything points at C is irrelevant, because whichever partition I boot, it is always called C.

Cheers,
Kim.

This is the one I am looking at.

No drift accepts line input.

A bit pricy but has good range and apparently good sound quality.

I can't find the one you are taking about DJ.

Typically, they either have rca inputs or 1/8" stereo input that you would need an rca to 1/8" adapter. (supplied with the one I am looking at).

Ofcourse you can always mod your transmitter with a longer antenna and stick run it out the window or something.

>I thought this was a pretty cool idea that Derek at CDBaby came up with, so I joined up for it. You can donate your profits from CDBaby to help Katrina victims for as long or as short of a time frame as you want. If any of you or your friends/associates have CD's for sale on CDBaby but didn't receive this e-mail from him, here's the full text of the e-mail pasted in below:

begin paste

Hi Neil -

If you'd like to donate all profits of your CD sales to the Red Cross disaster relief fund, to help the hurricane victims, I set up an easy way for you to do this at CD Baby.

Log in to your account, here:

https://members.cdbaby.com/login?u=***youraccountname***

After you log in, click [YOUR ITEMS], up top, then [EDIT ALBUM INFO] next to your CD, then click next to "Giving profits to charity".

It will explain more about how it works, there. (Please read it, first, before emailing to ask me questions.)

If you choose to do it, it will put your CD into a special section of cdbaby.com, linked from the front page, of other artists who have chosen to give their CD profits to the Red Cross.

Tomorrow morning I will email over 1 million CD Baby customers, telling them about this special promotion, encouraging them to buy some CDs from this special section.

You may think that a few sales won't help, but with thousands of musicians banded together to do this, I think it will help a LOT of people get their lives back together after this disaster.

Thank you.

AAIf Robert Plant likes to use a phaser on vox tracks, then I think we all
 should. Think how much easier mixing would be if stuff like phasing, DC
 offset, 60Hz hum, feedback, midi slop, overcompression
 sample rate errors, digital overs and 200Hz mud and was cool.....
uhhhhhhhh.....well, now come to think of it, maybe I've
 heard lots of this in records that went platinum recently.

By the way, I'm on my way to build a new computer too. I have ordered an Asus A8V Deluxe motherboard with an AMD64 3700(939)processor with a Arctic-Cooling Freezer 64 cooler with heatpipe, 1 Maxtor 200GB SATA and 1 Samsung 160GB Sata, Corsair XMS 1024MB memory, NEC ND-3540A burner, AOpen Aeolus FX520 graphic card with passive cooling an a Chill 500w power supply. It will be nearly noise free and for the future I can change the processor out with a X2 processor. So, now I'm on my way to learn to use Cubase SX3 after a couple of years as an owner of both Cubase and EMU 1820M:-)

Cheers
Erling

>Has anyone noticed that after working five years on the new White House sponsored

dependence on oil, fails to address the threat of global warming, fails to

make any significant new investments in clean energy, and fails to help consumers at the gas pump.

What it did do includes:

Grants the oil and gas industries an exemption for their construction activities from compliance with Clean Water Act.

Increases America's oil dependence by 130,000 barrels of oil per day in 2014 through extending the 'dual-fuel' loophole.

Authorized billions in new subsidies to the oil industry. (Who are all showing record profits without the government bonuses.)

Give away billions in unrelated pork fat. (The biggest giveaway of all time.)

The list of pork fat is too long and too funny for me to list but my personal favorites are:

Giving \$800 million for companies in Texas and Louisiana to compensate for their phase out of the gasoline additive MTBE, which studies have concluded contaminates ground water and causes cancer.

Since we will now longer allow you to poison us we will give you \$800 million

in one of the companies.

Not only opening up parts of the Alaska Wildlife Refuge, but also similar

Oil/mineral rights to some of this property.

In 2003, if you bought a Toyota Hybrid and owned a business you would have received \$450 in tax reduction from the IRS because of its energy efficiency.

If you bought a Hummer H1 (7 miles per gallon) and owned a business, you would have received aprox. \$30,000 in tax reduction from the IRS. (Public outcry has recently forced the closure of this tax loophole.)

Gene

on our current energy model. Any time our oil sources are negatively effected we go into an instant recession. This essentially enslaves us to the large

Unfortunately we are about to come to a critical fork in the road.

The people who will profit the most will be pushing the idea that we must reduce or remove all environmental constraints on energy suppliers to help us achieve independence and keep our economy working. This will help make many of them even richer and will shorten the time before we completely run out of US oil reserves, but will also cause tremendous health issues and will result in serious environmental impacts. Some of this already started. Only a national level push for new energy sources and energy independence, similar to the 1960s push to go to the moon, will help us now.

That plus having a White House and Congress that actually cares more about saving our economy than their personal wealth.

Genewhat's even better is that no one seems to care. Maybe some of those tax breaks could be suspended and used for disaster relief rather than asking joe citizen to pony up for it on telethons.

as to the MTBE...remember when reduced salt and fats soups were introduced...they had less yet cost more. i also don't remember them having any flavor. oh well, such is life.

The FM35WT can only be shipped outside the USA, or within the US if accompanied by a signed statement that the unit will be exported.

So I guess you are going to have to get the FM30 diy kit.

Unless you are going to break the law DJ!!! Well are you???

That is 1/16 mile or 330 feet or more is what I am calculating.
Should be plenty for what we are using it for.

FYI, MTBE is an additive that the environmental lobby *insisted* on the refineries adding to fuel because it reduced certain emissions levels. It was never tested properly before this was legislated. Turns out it was bad shit and now the oil companies are being sued for it when they only did it because it was federally mandated.

- > Not only opening up parts of the Alaska Wildlife Refuge, but also similar

- > Oil/mineral rights to some of this property.

There are huge natural gas reserves in Wyoming on the eastern slope of the rocky mountains. One of the biggest known ones is right outside of Glacier National park. You gotta go where the gas is to get it. The fact that Cheney owns mineral rights there is certainly fortunate for Cheney, but he's from Wyoming. I doubt he moved his family there 3 or four generations ago just because he knew that someday we would have high natural gas prices.

His brother is a surveyor in this area and I have worked with him before. If Cheyney is anything like his brother, it might be a good thing to get to know him before casting stones. Yeh.....I know.....its the Halliburton thing, right?

Most of the folks around here who own Hummers are tree huggers. (Just a little perspective)

The one your looking at seems pretty nice.
I will get the same one.

Heehee, OK:

Mac dual 800 G4, 160 GB system/apps disk, 250 GB internal data disk, three
250 GB Firewire drives for sound libraries. 1160 GB or so on just that one
computer. :-) (Pretty soon, I'm going to give in and put together a couple
rack mount pcs for the orchestral libraries...)

<http://www.parisfaqs.com>Bush on Good Moring America today....

"Who would have thought the levee would have breached?"

"No One Can Say They Didn't See It Coming"

By Sidney Blumenthal

Salon.com

Wednesday 31 August 2005

In 2001, FEMA warned that a hurricane striking New Orleans was one of the three most likely disasters in the U.S. But the Bush administration cut New Orleans flood control funding by 44 percent to pay for the Iraq war.

A New Orleans resident waded through floodwaters coated with a fine layer of oil in the flooded downtown area on Tuesday, August 30, 2005.

Biblical in its uncontrolled rage and scope, Hurricane Katrina has left millions of Americans to scavenge for food and shelter and hundreds to thousands reportedly dead. With its main levee broken, the evacuated city of New Orleans has become part of the Gulf of Mexico. But the damage wrought by the hurricane may not entirely be the result of an act of nature.

A year ago the U.S. Army Corps of Engineers proposed to study how New Orleans could be protected from a catastrophic hurricane, but the Bush administration ordered that the research not be undertaken. After a flood killed six people in 1995, Congress created the Southeast Louisiana Urban Flood Control Project, in which the Corps of Engineers strengthened and renovated levees and pumping stations. In early 2001, the Federal Emergency Management Agency issued a report stating that a hurricane striking New Orleans was one of the three most likely disasters in the U.S., including a terrorist attack on New York City. But by 2003 the federal funding for the flood control project essentially dried up as it was drained into the Iraq war. In 2004, the Bush administration cut funding requested by the New Orleans district of the U.S. Army Corps of Engineers for holding back the waters of Lake Pontchartrain by more than 80 percent. Additional cuts at the beginning of this year (for a total reduction in funding of 44.2 percent since 2001) forced the New Orleans district of the Corps to impose a hiring freeze. The Senate had debated adding funds for fixing New Orleans' levees, but it was too late.

The New Orleans Times-Picayune, which before the hurricane published a series on the federal funding problem, and whose presses are now underwater, reported online: "No one can say they didn't see it coming ... Now in the wake of one of the worst storms ever, serious questions are being asked about the lack of preparation."

The Bush administration's policy of turning over wetlands to developers almost certainly also contributed to the heightened level of the storm surge.

In 1990, a federal task force began restoring lost wetlands surrounding New Orleans. Every two miles of wetland between the Crescent City and the Gulf reduces a surge by half a foot. Bush had promised "no net loss" of wetlands, a policy launched by his father's administration and bolstered by President Clinton. But he reversed his approach in 2003, unleashing the developers. The Army Corps of Engineers and the Environmental Protection Agency then announced they could no longer protect wetlands unless they were somehow related to interstate commerce.

In response to this potential crisis, four leading environmental groups conducted a joint expert study, concluding in 2004 that without wetlands protection New Orleans could be devastated by an ordinary, much less a Category 4 or 5, hurricane. "There's no way to describe how mindless a policy that is when it comes to wetlands protection," said one of the report's authors. The chairman of the White House's Council on Environmental Quality dismissed the study as "highly questionable," and boasted, "Everybody loves what we're doing."

"My administration's climate change policy will be science based," President Bush declared in June 2001. But in 2002, when the Environmental Protection Agency submitted a study on global warming to the United Nations reflecting its expert research, Bush derided it as "a report put out by a bureaucracy," and excised the climate change assessment from the agency's annual report. The next year, when the EPA issued its first comprehensive "Report on the Environment," stating, "Climate change has global consequences for human health and the environment," the White House simply demanded removal of the line and all similar conclusions. At the G-8 meeting in Scotland this year, Bush successfully stymied any common action on global warming. Scientists, meanwhile, have continued to accumulate impressive data on the rising temperature of the oceans, which has produced more severe hurricanes.

In February 2004, 60 of the nation's leading scientists, including 20 Nobel laureates, warned in a statement, "Restoring Scientific Integrity in Policymaking": "Successful application of science has played a large part in the policies that have made the United States of America the world's most powerful nation and its citizens increasingly prosperous and healthy ... Indeed, this principle has long been adhered to by presidents and administrations of both parties in forming and implementing policies. The administration of George W. Bush has, however, disregarded this principle ... The distortion of scientific knowledge for partisan political ends must cease." Bush completely ignored this statement.

In the two weeks preceding the storm in the Gulf, the trumping of science by ideology and expertise by special interests accelerated. The Federal Drug Administration announced that it was postponing sale of the morning-after contraceptive pill, despite overwhelming scientific evidence of its safety and its approval by the FDA's scientific advisory board. The United Nations special envoy for HIV/AIDS in Africa accused the Bush administration of responsibility

for a condom shortage in Uganda -- the result of the administration's evangelical Christian agenda of "abstinence." When the chief of the Bureau of Justice Statistics in the Justice Department was ordered by the White House to delete its study that African-Americans and other minorities are subject to racial profiling in police traffic stops and he refused to buckle under, he was forced out of his job. When the Army Corps of Engineers' chief contracting oversight analyst objected to a \$7 billion no-bid contract awarded for work in Iraq to Halliburton (the firm at which Vice President Cheney was formerly CEO), she was demoted despite her superior professional ratings. At the National Park Service, a former Cheney aide, a political appointee lacking professional background, drew up a plan to overturn past environmental practices and prohibit any mention of evolution while allowing sale of religious materials through the Park Service.

On the day the levees burst in New Orleans, Bush delivered a speech in Colorado comparing the Iraq war to World War II and himself to Franklin D. Roosevelt: "And he knew that the best way to bring peace and stability to the region was by bringing freedom to Japan." Bush had boarded his very own "Streetcar Named Desire." And this is news? They've been predicting this for 40 years? I saw the Army Corp of Engineers General on Fox last night and he said the levees were designed to withstand a Cat 3 hurricane. He said we should be talking to the Dutch since they seem to have it down. :)

This may be true but it is an interesting perspective on the history.
The environmentalists got onboard with MTBE because the additive companies
presented the information on the positive impact, while covering up known
problems with cancer and ground pollution.
This was well documented in a California study funded by the California state
legislature.
Naturally when presented with studies that showed significant improvement
in air quality, most pro environmental groups signed on.
When the full truth came out, the oil industry backed by the first Bush White
House and conservative members of congress (can you say Tom DeLay) did everything
in their power to hide the facts, and then block efforts to remove the MTBE.
Now the \$800 Million bonus for lying to us, and poisoning us.
It is quite an interesting twist to blame this on the environmental movement.
GeneOr these guys... we use them for audio distribution at large scale
events (street festivals and the like).

Standalone?

2.What are my options for replacing one or both pickups in my Telecaster with humbuckers? I love the way my guitar sounds, and wouldn't want to necessarily change the sound itself, but I sure would love to kill the noise...

I play through an old silver-face Fender Twin that a local amp guru has rewired to black-face specs. It sounds amazing, and it's in top shape, but I'd love to get that Tele-Twin combo a little quieter...

JimmyTurn off your computer monitor if you have the old bulky type.

Shield your electronics compartment on your tele with that paper shielding (adhesive on one side).

Use a gate. or just cut out the noise manually.

Cool edit pro has a pretty good noise filter , but you have to process it. make sure you get a sample of just the noise for Cep sample.

An Army Corp of Engineer rep said yesterday in an interview that it was years ago when the levee was inadequately designed. The reason - they did a cost/benefit analysis and a more secure levee didn't make sense - I guess the probability of a Cat 5 hurricane was in the negligible range at the time, or they didn't know it would be that bad. Hindsight is always 20/20, especially for those that have nothing to do with planning beforehand...

The levee is mostly porous rock and earth, not concrete and steel. Current federal funding had nothing to do with it - that was maintenance money at best, not redesign. The engineer pretty much said there was nothing that could have been done to the levee short of rebuilding it from scratch that would have stopped what happened.

Please, troll, don't waste our time with politically motivated rantings. Placing blame is a complete waste of time, especially for people who just lost everything in New Orleans, Louisiana and Mississippi. People posting rantings as a way to stick it to the administration are no better than price gouging hotels and gas station owners in Louisiana and Miss - opportunists, at best. The gulf coast is suffering enough, and our country needs to exercise a measure of respect and cohesiveness to resolve the energy crisis we may be facing.

These pickups *kill* and are dead silent. Not fake single coil sound, but the best, clear single coil sound I've ever heard, despite being dead silent.

<http://www.fralinpickups.com/humbuckers.asp#p92>

I use the "Twangmaster" and love it. It's 2 coils, but each coil is only covering 3 strings. That way the coils can be in series, so you get the silence of a HB, but because only 1 coil picks up each string, you get the sound of a single.

Another option, if you want something to go in the standard cutout is Chris Kinman's stuff.

<http://www.kinman.com>

His Tele pickups are very quiet and sound terrific, and don't require cutting any larger openings in anything. He's an Aussie, but his pickups sound like Fullerton (or maybe Memphis) if you know what I mean.

Inside Paris, sometimes I simply go around editing out the spaces between guitar parts to get the hum out if I just have to use a guitar with a buzzy pickup on it. Lot's of work, but effective unless the guitar is clean, and mixed way up front.

DCThat only applies if the messenger is delivering the truth.

I have proof that all the money diverted from any federal flood control projects was used to pay for welfare programs, grants for people who roll around in shit and call it art, federally funded abortion clinics, and interest on defaulted student loans.

;>)

Obviously, the above sentence is farce, as is the linked article in question.

what a warm and fuzzy response

JM you guys are funny...

what do YOU consider a reliable source?

FWIW, I've been hearing the same thing reported all day on multiple
channels.

Mmm... never heard of the physical switches. Interesting...

I doubt that either those or the trays would work with the way I'm running things. I've got six bootable partitions, which are three each on two 250 Gig drives. I imagine both the trays and switches would only really work if you had drives set up with just one bootable partition on them and only needed to switch between drives.

I have always thought though that the trays are a really good solution, assuming your drive/partition setup suits it. There is something reassuring about knowing that your other boot isn't even in the machine. Of course on the down side moving the drives about can't physically be so good for drive reliability.

Cheers,
Kim. Personally I treat these types of posts like a virus.
It infects the board and before you know it...
Oh crap!! I got it on me!!!!
I got go wash my hands!!!!
AAAAAaaaahhhhhhhhh!!!!!!!

;-)

>She's runnin' BEAUT!! :o)

Last night I got Paris and all my standard plugins loaded. Had a couple of issues briefly where I hadn't restarted after installing some DX plugins which the system didn't like much. Once I got that resolved it seemed to work perfectly. I didn't give Paris a really lengthy test though, but had a listen to a few projects... engaged and disengaged some plugins. Seemed solid, and very quick. Extremely usable.

And my favourite test of "snappyness" of all, on boot, when the black Windows screen with the blue Knight Rider bar comes up, the blue bar travels from left to right a grand total of ONCE! :o) In bootup, the machine spends far longer getting it's BIOS organised than it does booting Windows.

Also, I remembered the old Aaron Allen tweak of putting a "Prefetch.bat" in startup which has the line "del C:\Windows\Prefetch*.*/q" and hence clears the Windows prefetch. That actually sped up the boot process from about 4 knightrider bars to just the one.

Made a ghost. Now I'm ready to move on to loading the general Audio Apps boot, which will involve starting from the Paris Only boot, and adding Cubase and Reason. I'll have to buy the BFD one day soon too...

Cheers,
Kim.I do indeed work in the industry. No denials, no apologies. If I am stereotyped for not automatically assuming that every anti-industry viewpoint is valid, then so be it.....again no apologies. I do question both sides. If you have read some of my posts here you might discover that I'm a somewhat reluctant conservative, perhaps siding with the least dangerous of the two evils I see and seeing very little in the middle that looks reasonable to me.

Gene.....with all due respect to you, I know quite a few environmental activists and not a single one would *get onboard* something like this and take the additive companies at their word on anything.. This is finger pointing spin. Consider the source. I'm not saying that MTBE is a good thing and that the money. The fact that it's the California State legislature, arguably the most corrupt and partisan outside of New York and Texas, I'd say there is plenty of room to question the source.

You win. I'm taking my dual 1GHz Quicksilver and going home.

pabAwesome. I've always heard about Lindy Fralin.

With the Fralin pickups, how does a techy route out a hole for the bridge pickup? That pickup is set into the metal plate that the bridge is mounted on.

It makes me wonder if I could install the Kinman pickups myself, being moderately handy. Is there welding involved?

Are the Fralin pickups that much better than the Kinmans?

You have to get it machined or buy one for a HB.

>It makes me wonder if I could install the Kinman pickups myself, being

Soldering. As long as you have a fine tip iron and the right solder,
no sweat.

>Are the Fralin pickups that much better than the Kinmans?

Can't say that. Kinman's stuff is gorgeous sounding. Every
time I stop by his booth at NAMM his pickups knock me out.

I just love the Twangmaster, but if you want to try the no-mod
way, it would be an easier install to get a Kinman.

It sure could make farming a lucrative occupation again...What the fuck is going on? Why is this thing getting so bad?

Is this the best we can do?

I don't know what to say, but I feel compelled to scream.If you're talking about New Orleans, it's because the disaster event isn't over yet. The flood is still happening.

IOf you're talking about everything else that's happening in the world.....it's because of France.

>

> I don't mean to sound like I'm saying I told you so, but scientists have been telling us the weather will get more severe for years due to global warming...

This August, here in Melbourne, half way through the month we were told we were headed for the warmest August ever, then suddenly in week 3 Melbourne experienced the coldest August day since the 70's, then suddenly it went warm again.

All this stuff is no coincidence.

People who wont even sign KYOTO, which in itself goes nowhere near far enough, make me want to scream, for exactly the reason we're now seeing. Frustrating as hell.

Cheers,
Kim.

Here in Australia we've totally irradiated 60Hz hum from all audio...

....our power runs at 50Hz... ;oP ...ok, sorry for wasting your time on
that one, I'll go stand in the corner... ;o)

Cheers,
Kim.

>Man, I've had it with this crap. I've had two TL Audio Indigo processors in
my rack for many years. Either/both of them will work just fine for a while
and then just start distorting like crazy.....or stop passing signal form
an output, or a pot will fail, not just get scratchy....totally fail. I've
opened these up, replaced IC's, resistors, caps, tubes, sent the EQ to an
authorized repair facility (worked fine after that for about 6 months, then
started having the same issues), you name it.

When they are working, they sound very nice and that's why I have kept them
and babied them along, but I just can't put up with this unreliable garbage
any more. They are worthless to me if I can't depend on them.

I'm thinking about selling them *as is* with a truthful statement about
their condition, but I might also just enjoy the hell out of video taped
sledge hammering or maybe a target practice session with these as the
target. I could send the pics to Fletcher so he can put this up alongside
the dead Mackie mixer and ADAT shit on a stick memorial. I recall posts
indicating that he has no love for this product either.

I did own a couple of PA2 preamps a while back that sounded darned good. I
sold them in good condition. I hope they aren't acting like these old Indigo
series processors now.

;o(Why not hit them with a sledge hammer and THEN try and sell them on ebay?
If you include photos at least you'll get a laugh. :o)

....and it is kinda probably true really...Kim,

No disrespect to you but what a crock to conclude that a Cat5 'cane has anything to do with GW or global warming/cooling. Weather gets more severe because that's what heavy weather does. Records get broken, storms get smaller and storms get bigger. High jumpers jump higher, sales records get smashed, TV's get bigger/better, audio players get smaller, moles come and moles go.

The recent killer tsunami in Indonesia - KYOTO just didn't get inked fast enough and so - BOOM - nuther big ass . When folks taut this kind of simplistic, meteorologically illiterate conclusions, it hastens the notion that "the simple go their way and are punished" for their ignorance. When the weatherman, with all his pinpoint-double-doppler exclusive

super-hootie-NOAA-assisted-block-by-block-accuweather-can more accurately predict inside a 12-hour apperature of time, the myopic scientific types might get a nod from me. I wish it were so simple a matter as each of us cherry picking one article from a magazine or newspaper of our choosing, proclaiming that to be "the last word."

Half-asleep,
Dubya

>Hi,
I suggest looking at the power supply.
When it distorts just measure the voltage at any chip to see what it gets.
Maybe the transformer does not output anymore (or was never) the right power.
Try putting a new better bigger transformer.
I guess it is worth trying.

>Hi,
After some good tries I came up with a paris wormhole version.
There is one specific version (which Adrian from wormhole has tailored to

our needs) that will work best with Paris.

It works under Me and I can have at least 8 tracks of fully synced audio tracks coming from second computer via lan.

You have to use though console wrapper as it is the only yet that sends syncing information.

I wanna know when I finally test this baby that he will get some support from us.

We have to buy some of us (I have already)) to justify all his extra efforts he made for us.

It is cheap anyway...

Please respond with some positive interest in buying.

Afterall you will get fuller versions with updates for other systems that work great along with Paris version.

Come on guys we don't expect people to work for us and have nothing for return...

This way we may keep Paris alive for years (I hope) to come...

Regards,

Dimitrios"W. Mark Wilson" <wmarkwilson@verizon.net> wrote:

>No disrespect to you but what a crock to conclude that a Cat5 'cane has

>anything to do with GW or global warming/cooling.

Well, no disrespect to you, but when I hear ten years of talk about how weather will get more severe and more extreme, and when I look at weather in my own city, and not only notice the changes, but also hear constant news reports confirming that we're hitting more extremes more often, well it leads me to the natural conclusion that maybe, just maybe, all those scientists who claimed for years that we should expect worse hurricanes, well maybe they were right.

You're right in the simple example that one cat5 does not a global warming link make. And records, one would expect, will be broken from time to time anyhow.

Personally I start to think something is amiss though when I hear "Warmest [month x] on record" every couple of months. I don't expect to change your mind Mark, as I've learned that Don C is pretty much dead on when he says nobody ever changes their minds in these discussions. None the less, every time global warming comes up on this NG I always have a record to resite for my home city for the current day, week, or month, and it's more often than not something like it was this time...

OK. Let me tell you some stats:

This year, for Melbourne, where I live...

2004 was the 4th warmest year on record. We finished off 2004 with the wettest

end to a year ever. Then had the coldest February (summer) day on record which included the highest rainfall ever in the city by a factor of 20%, which was 3 times the average MONTHLY rainfall ALL IN A SINGLE DAY. The coldest February since 1954. Wettest February since 1973. Driest Autumn since 1900 since records (1900) for the state. Warmest autumn since 1950. (Autumn here being Mar, Apr, May of course).

Meanwhile July's minimum temps were the (equal) warmest on record.

We started August by being told 2 weeks in that averages were warmer than any August on record. Then week 3 I got snowed on in Ringwood. It doesn't snow in Ringwood, period. It was the coldest August day since the 70's. The most extreme August since, oh I don't remember...

Sorry dude. I can see where you're coming from, but honestly, where I'm sitting, things just aren't normal. And more and more people are saying it...

Cheers,
Kim.Hmm, it's only \$50US... I'm very tempted. ;o)

What's the cost of this Console wrapper. Did a quick google. I take it this is it at \$54...

<http://www.kvraudio.com/get/267.html> ?

So it's \$104US for the whole shebang. Not too shabby at all...

I have been, in my mental peripheral vision, partly aware that you've been working on this. It does sound interesting. I don't mean to be a pain, but could you take us through exactly what you've acheived here? Why Console? Are you running VSTi's in Cubase on another box over the LAN interfacing back to Paris? I read talk somewhere that Console can clock to MIDI...?

What exactly are you able to do with this setup?

Cheers,
Kim.

>Because it takes more money to grow corn, water it, fertilize it with pesticides, harvest it with gas guzzling harvesting machines, haul it to market in gas guzzling trucks and refine it with expensive natural gas or coal fired processing equipment and the process itself produces high levels of carbon monoxide, as well as what are known as Volatile Organic Compounds or VOCs. VOCs included formaldehyde and acetaldehyde, both of which are known to cause cancer in animals.

Also, vehicles that use ethanol are marginally less fuel efficient than those who run regular gasoline, though I don't think this particular aspect of it would stop me, personally, if it was a dollar less per gallon.

The economics have changed now due to the fact that we no longer have the refining capacity in this country or the oil production capability to keep gas cheap any more and even if we started right now, we are 10 years out.....so now agribusiness is going to get the pork in the energy budget. It's not going to help the family farmer much at all comparatively speaking, unless he's got enough acreage to grow *lots* of corn.....in which case he will be an evil agribusinessman.

In 1997, the GAO issued a report that concluded that the ethanol subsidy cost the federal treasury more than \$7 billion since 1979 - more than \$600 million in 1995 alone." the mega-giant corporation Archer Daniels Midland stands accused of being the recipient of this vast corporate welfare scheme.

This ain't organic corn we're talking about either so it's going to get hosed with chemical pesticides, big time, to keep yields high and, like the MTBE's, this will leach into the water table.

Cool huh?

The middle would

work for me except for one thing.....it's refusal to truly acknowledge
and recognize the fact that we are in a war that is equally as serious as
WWII. The right recognizes this and also recognizes that you can't fight a
war in a half assed effort and you can't win a war unless you first
acknowledge that you are in the middle of one.

hehe what are you a lobbyist? :)Warmer ocean temps mean more severe and frequent hurricanes.
Even a few degrees
makes a difference.

Ethanol is heavily-subsidized, that price doesn't reflect the true market conditions if everyone in the country (or even a good chunk of it) were to switch to ethanol... we'd still be paying more for it than the price shown, it's just that we'd be paying for with taxes instead of at the pump itself.

>i don't think moving drives makes any change in reliability

Yeh, I'm not so sure. From what I've heard moving drives doesn't help. In fact I had my main Paris hdd die back in 99-00 sometime when I was moving house. Moving the computer killed the drive. Was working perfectly when I left. Error city once I got to the new place. No co-incidence. Yes drive technology has improved a little, but I'd bet on a drive which stayed still above one which experienced constant moves any time.

> Cheers,
> Kim. I am not out to change anyone's mind, but I have done my own research on
climate. With my understanding of cyclical world climate changes,
understanding of the gulf stream mechanism, as well as the scope of
naturally occurring co2, I am confident that the earth has a tendency to
keep itself in balance, even if that means shedding off certain species
(including us). The earth doesn't need our help. It's been doing fine for a
few billion years.

I think it's a bit short sighted to use a 2-300 year period of record
keeping to define "normal" (1/.000000075th or so of the earth's life). The
earth isn't going to stop evolving just because George Bush found Jesus.

You think "global warming" is bad, then you'll be in shock when the sun goes
through another 100 year solar flare cycle (think about it, computers
weren't around during the last cycle). Just imagine a world with no wireless
transmission for several weeks or months. We'll be replacing ICs in the
majority of computer appliances (including just about every vehicle within
the sun's line of sight) and a lifetime of UV damage will be nothing
compared to what 5 minutes exposure to a large flare can do.

The earth's a dangerous place. You need to be educated and prepared in order
to survive.

Just one man's opinion.

and a post script:

"As democracy is perfected, the office of president represents, more and
more closely, the inner soul of the people. On some great and glorious day

the plain folks of the land will reach their heart's desire at last and the White House will be adorned by a downright moron."

H.L. Mencken 1880 - 1956

I think this theory is now fact. I think Bush truly believes he is the "Armageddon" president, and that he and his believers will be picked up by Jesus on a chariot. This guy embraces disaster. He drools over it. Policy aside (I actually agree with about 80% of it), this guy IS a moron.

Do a little research and you'll find a similar "Armageddon" campaign around 1000 AD. Hundreds of thousands died around that time, not because of natural disasters, but because the majority of the people stopped planting crops, and starved to death.

 Indeed, come to think of it, tell the thousands who have had trouble with
 their IPODs that. I've heard reports that IPODs are having huge reliability
 problems, all because their ads show people jogging listening to tunes, when
 in fact, despite the IPOD drives being equipped best they can for movement,
 no physical hdd really suits being shaken about. Hence people go running,
 and the machine lasts only 3 months.

That's what I've heard anyhow...

Cheers,
 Kim.Why the hell are there still people down there who haven't gotten
 water or food!! I don't understand this, it's insane.

I'm tempted to buy a bunch of gas cans, fill them up and drive
 down and pick up someone who's homeless and let them crash at our
 crib here in St. Louis. I know this is probably not a good idea
 and I would just be getting in the way of the trained response
 people, but it seems there is a break in the chain of response

somewhere.

I realize this is a huge catastrophe, but it doesn't look like there was proper response in place. Homeland security, no child left behind; interesting phrases at this time. And no I'm not a Bush supporter obviously; it can't all be blamed on him.

I'm just ranting as I feel I need to right now.

It simply isn't so. Frankly Kim, this is a major disaster, not an opportunity to bang on your issue, even if it were relevant, which in this case it isn't, and even if it were, Kyoto won't fix it, and is fatally flawed anyway.

Lots of folks are banging on this issue. And looking silly.

this is from the UK Independent:

King: Global warming may be to blame

By Andrew Buncombe

Published: 31 August 2005

Sir David King, the British Government's chief scientific adviser, has warned that global warming may be responsible for the devastation reaped by Hurricane Katrina.

"The increased intensity of hurricanes is associated with global warming," Professor King told Channel 4 News yesterday. "We have known since 1987 the intensity of hurricanes is related to surface sea temperature and we know that, over the last 15 to 20 years, surface sea temperatures in these regions have increased by half a degree centigrade."

"So it is easy to conclude that the increased intensity of hurricanes is associated with global warming."

Professor Kerry Emanuel of the Massachusetts Institute of Technology also claimed, less than a month ago, that ocean surfaces had become warmer, which doubled the destructive potential of tropical storms in the past 30 years.

But he said that Monday's storm "is part of a natural" cycle of powerful Atlantic storms that have struck since 1995. He told The Independent: "I don't think you can put this down to global warming."

Other scientists point out that the 150-year record of Atlantic storms show there is ample precedent for hurricanes of Katrina's power. They say it is part of a natural upswing that has taken place since the mid-90s.

Officials at the US National Oceanic and Atmospheric Administration said records showed hurricane activity in the Atlantic had been higher than normal in nine of the past 11 years. This month the federal agency raised its hurricane forecast for this year from 18 to 21 tropical storms, including as many as 11 that would become hurricanes.

If that prediction holds true, it would make this year one of the most violent hurricane seasons recorded. A typical year in the Atlantic results in six hurricanes. The agency said the increase was likely to be the result of cyclical ocean and atmospheric conditions that produced heightened storms every 20 to 30 years.

William Gray, a Colorado State University meteorologist who is considered one of the fathers of modern tropical cyclone science, said worldwide weather records were too inadequate for a thorough examination of trends.

He told The Los Angeles Times: "The people who have a bias in favour of the argument that humans are making the globe warmer will push any data that suggests humans are making hurricanes worse, but it just isn't so ... These are natural cycles."DJ,I disagree we're in a war as equally serious as WWII.Wanting to see all sides of the issue could you explain how you came to believe that.All respect intended.

>jp - Your climatology insight is fairly well reasoned. Your post script is yet more politically opinionated slander. Sorry, it's true. GWB doesn't see himself as the "Armageddon" president. That's just ridiculous extrapolated hyperbole.

Yes weather goes in cycles. Katrina is the worst hurricane since Camille, but Camille was worse - I think 210mph winds there - it was a full cat 5 when it hit Galveston in 1900. We only have accurate weather records for a little over 100 years here. Let's be real here. New Orleans is below sea level, on the coast. How arrogant could we humans possibly be than to build a city in the center of hurricane alley, below sea level? I'm not diminishing the catastrophe for the people there, but we have high rises and homes right on the beach that get wiped out time after time, yet we build right back. Isn't there a measure of personal risk, or just unfortunate circumstances involved with where we choose to live? Sure, some people really don't have a choice, and for them it's tragic, pure and simple. No blame either way, just reality. People who live next to rivers take the same risk - great place to live, but it comes with the chance you might lose it someday. The more people do this and the larger populations grow, the bigger the catastrophe when a storm or flood does hit. It's been happening for centuries - the ice age was a huge natural disaster - but no one was around to film such past natural events, so we really don't bother thinking about how comparatively normal the hurricane, and even the tsunami are in the scope of global weather history.

Kim I'm sorry to hear you had weird weather in Australia, but based on scientific reports I've heard, such events are far less likely to be the result of global warming than a 20 year trend in averages would be. Certainly some odd events could be a result, but it is nearly impossible to say for sure, and certainly even harder to predict. We live with highly variable weather here in the US. Both the hottest temp and the highest wind gust ever have been recorded in the US, since records have been kept at least. Highest wind gust - Mt. Washington, NH I believe - I've hiked it, but it was only 40F that day, with 20-35mph winds, so a normal day basically :-). Hottest temp - probably Death Valley. Good name too.

We do need to address our environmental habits - there is without a doubt an impact we are paying for, whether we really know it or not. But launching blame against governments for not doing something sooner in the face of a natural disaster is ludicrous and ill-informed. Let's fix the real problem - name one person in a one developed country that could live without a car if we really did what it takes to solve this quickly - cut fossil fuel usage by 50-100% in a year, not 10, or 20 like Kyoto, but 1 or 2. We've created societies (Australia, Europe, Canada, Asia, Russia, etc included) that would have a hard time surviving economically if we really addressed environmental issues head on, with real mandates or laws, and real results. It would hurt bad - very bad. That's the crux of the seemingly wishy washy policy approach to it. It won't happen until the people of this world decide to do

something. It's simply lame to sit around waiting for governments to not only force us, but convince us that whatever legislation is passed is a beautiful thing and we'll love the results. That's what we are doing to be truthful - waiting for someone else to take the situation in hand and convince everyone else it's the greatest idea since the wheel, which is really the one that started this mess.

Regards,
Dedric

I'm with you.

The president is not an inspiring leader at times of diaster, but this f*ckup has to be laid at the feet of the tradition of corruption and poor government in NO. They knew exactly what would happen to the levies, they knew exactly how deep the water would be and where it would go. Why was there not an effective emergency plan? Where was the local leadership? When NO needed a Giuliani they got a worthless whiner and no plan. Bush was slow, as he usually is. No excuses. But compared to the city and state bozos he is a paragon of virtue.

DCCan't disagree with you there. When Katrina first happened I was seeing the governor and mayor on tv pretty often; haven't seen them in a day or two. I hear the mayor is in Baton Rouge now. With the communications the way they are he might need to be there, but I don't think the hungry, thirsty suffering people in NO would think much of their mayor being elsewhere.

>DCWhile I think that the case for global warming has been made to the satisfaction of most of the world's scientific community, I don't know that it was a major contributor to the magnitude of this hurricane. I recently read that there is a 40 year cycle of hurrican activity, and we have entered the not so pleasant part of that cycle.

New Orleans is one of my favorite cities. I was just there in June for the Tape Op Con. But I think we need to ask the question "does it make sense to rebuild it in the same place?".

>I tend to agree on this point. The first thing that started really scaring

me was the fact that the governor of LA was near hysterics in a televised news conference. That was Tuesday, and things have gotten much worse since then. And the mayor of NO doesn't seem entirely competent to handle the situation, either...to put it nicely...

LA leadership is not up the task, never could have been. It's just so obvious the whole place got caught with a uppercut it never bothered to take seriously.

It is unconscionable, however, how slow and lazy the Federal response has been. The various leaders of various agencies, including our not-so-esteemed boy king, have spent more time making excuses, it seems, than in making things better.

I am simply horrified with what is unfolding. The political repercussions will be massive. I predict the head of FEMA will be jobless very soon.

>Jason,

It wasn't meant to be warm and fuzzy. It was meant to be ludicrous just like the linked article was. Yes, I'm a conservative leaning libertarian. Yes, I'm disgusted with the fiscal waste by Washington. I'm also sick and tired of the hard left blaming everything bad that happens in the world on the Bush administration. For God's sake, people are still dying in New Orleans and a large part of the country would rather turn this disaster into a partisan politics pissing match. It's sickening. This isn't the America I knew growing up.

I heard today that the Corps Of Engineers have been warning of the possibility of this kind of disaster since the early 1960's. What did Kennedy do? What did Johnson do? How about Nixon, Ford, Carter, Reagan, Bush #1, Clinton? That's eight administrations that had the information and for whatever reason nothing (or very little and certainly not enough) was done.

I have no great admiration for George Bush. I disagree with more and more of his policies every day. It's the fervent and utterly absolute hatred by the left that really disturbs me.

*****WARM AND FUZZY PART*****

I'm really diggin' Miles to Miles. Listening to Butter Pecan as I type. Excellent! As I've said before, regardless of everyone's differing political views on this news group, I have faith if any of us were to meet on the

street, that we'd become quick friends. I think most all of us can at least agree that PARIS rocks!

Here's wishing everyone on the group peace, safety and happiness.

> Cheers,

> Kim.Here's what I don't understand... a day or two before the hurricane made landfall, when they knew it was going to be a bad one, but didn't necessarily know where it was going hit exactly, why didn't the feds start sending emergency vehicles & supplies to a staging area in like Kansas, or Oklahoma, or something?

I mean, you can't send things right down into the storm itself,

at that point of course, all that stuff would've been destroyed along with everything else, but start shipping truckloads of non-perishable food/MRE's, deploy gasoline tankers full of fuel, flatbeds with emergency generators mounted on the backs, medical personnel & supplies, water tankers, tents, etc.

If they had done this, then all this stuff wouldn't have to start trickling in from all over the country several days later... they could've had supplies & personnel there the day after the storm subsided, and if they'd stage at some point that's far enough away to be safe, but close enough to where it cuts a day or two off the time that relief starts to arrive, they could've been in any of those cities down there much faster.

I don't get why we don't do that, especially when they know there's going to be SOME level of damage and that SOME people are going to need help. It's not like this thing just came out of nowhere & surprised everyone. Why isn't something like that part of FEMA's planning?

>Dear Kim,

There is only a specific version of Wormhole that works under Paris in
synced mode.

In order to have the inntanses synced you have to wrap wormhole with console
wrapper.

I tried all wrappers, none else sends syncing information or at least
syncing information that wormhole can grab.

I manage to have around 8 instances of wormhole playing in sync.

It is not a perfect world with Paris though.

Under Me console does not save its environement but you can save from within
console and load so you can load it after Paris has been opened.

I ahev once tried and played with vst instruments from within console with
some success but was waiting for a console update to have MTC support not
only midiclock.

There are great possibilities but you need time for experiment.

It is not the magic solution but someone can use paris one card system for
realtime mixing device running his cubase program from another pc over
lan...

> see himself as the "Armageddon" president. That's just ridiculous
> extrapolated hyperbole.

Let me make one thing clear. Slander is creating false statements for the purpose of swaying ones opinion of a person or entity. I don't see how my quote...

"I think this theory is now fact. I think Bush truly believes he is the "Armageddon" president, and that he and his believers will be picked up buy Jesus on a chariot. This guy embraces disaster. He drools over it. Policy aside (I actually agree with about 80% of it), this guy IS a moron."

....is false in any way shape or form, unless of course YOU actually know what I think better than I. This is my personal opinion, is stated as my personal opinion, and is backed by my own research. Quotes such as this:

"I feel like God wants me to run for President. I can't explain it, but I sense my country is going to need me. Something is going to happen... I know it won't be easy on me or my family, but God wants me to do it."

"God told me to strike at al Qaeda and I struck them, and then he instructed me to strike at Saddam [Hussein], which I did, and now I am determined to solve the problem in the Middle East. If you help me I will act, and if not, the elections will come and I will have to focus on them."

as well as my own interpretation of Bush's reaction to disaster, leads me to this opinion.

I accept that you don't agree with my opinion, but it is no more slanderous than George W. Bush's own comments on Homosexuality are slanderous to those who choose to practice alternative lifestyles.

I also believe that the majority of organized religions were spawned as a crutch to deal with the fact that as human's we have become temporally aware, and therefore aware of not only our own existence, but aware of our own termination. I believe many religions are filled with people who are simply sheep, following the herd, without really analyzing what the herd actually stands for. These are the idiots I speak about. You may agree, and exclude yourself from this flock, or you may disagree, but my beliefs will remain steadfast. IMOHO George W. Bush is a Bible toting moron.

I believe in God, but I believe that God is far beyond human comprehension (in fact He is beyond the limits of time itself). I believe most religions attempt to humanize GOD in order to understand him. This is the issue with religion that I find appalling. I believe that there is room for both an creator and evolutionary process. I have no problem stating that anyone outside this view is in my own opinion, a moron.

again, just my opinion. It's certainly looking that way isn't it?.....and this is because of the *middle* I was talking about. We don't have the balls to stand up and fight anymore and the enemies of this country know that all they need to do is wait for the leftists to get their various *activist movements* in gear and undermine the military effort while spouting off their quasitreasonous crap while wrapping it in pseudopatriotic bullshit.

It's as predictable as the sun rising and setting.

done.
second, we'd have to lose the "nice guy" approach to a war of this
kind.
third, i believe all sides have the not only the right but the duty to
speak up. imho, it's when the middle says and does nothing is when
you get a sadam or hitler...cuz it's only the extremes who do all the
talking and taking.

>>While I respect your opinion, you are guessing what another person thinks
without knowing them personally, much less their thoughts. Without knowing
someone's thoughts and intent first hand, your opinion isn't necessarily
true. If you portray that person in a negative light without that

knowledge, it is slander, or at best gossip. Even stating the truth about someone else without permission is gossip.

> Jesus on a chariot. This guy embraces disaster. He drools over it. Policy
> aside (I actually agree with about 80% of it), this guy IS a moron."

Your last three statements here were not just "I think", but stated as fact. But enough statement analysis... Suffice it to say, if there is a chance our opinions of others could be wrong, they are better left unsaid. We all do it though. It is a hard temptation to resist, especially when we feel personal frustration. I do it too, sadly.

You also seem to have a rather negative impression of Christians. A faith not practiced in daily life isn't faith, but a set of beliefs adopted as a hobby. You state religion is a crutch, but that is a sweeping generalization. For some that may be true, but let's be clear about the distinction between religions as organizations and faith as a belief in a God. Religion is a perspective on a belief systems adopted by people. Faith is rooted in the very heart and soul, not the head or intellect. Faith is a two way street - without God to guide me, my faith would be useless. At the same time, if I didn't believe God would guide me, it would also be meaningless.

Faith requires action, or it is just lip service ("Faith without works is dead"). To act on religious laws or mandates is no different than acting under corporate guidelines - it doesn't take faith in God to follow a few rules, traditions or practices. Acting on faith as a Christian is between the believer and God, based on God's own word (the Bible and prayer). Other religions may claim the same communicative guidance, but my faith as a Christian would be meaningless if I believed all religions were another form of the truth, or if mine were just my personal interpretation, open for variation, moderation and alteration at the whim of peers, society, a religious organization, or those that disagree with me. If there is no absolute truth, there is no absolute wrong. Simple logic tells us there has to be some absolutes, or we will slide into complete chaos. So where do those absolutes come from? God of course - through the Bible.

The Bible is clear about homosexuality being wrong, as well as all sin (lying, cheating, stealing, etc, etc, etc). I don't condemn homosexuals as fellow citizens, friends and human beings but that doesn't somehow make it "right" in a relative sense (i.e. only wrong "for me", but "right" for them). From a Christian perspective, passing legislation to support and (in effect) promote what is clearly stated as wrong in God's word is dangerous for us as a country, not just people choosing that lifestyle - that's why it enters politics, whether you believe it should be there or not (faith without works...). It isn't about "pushing our beliefs on everyone else". It is about seeing Sodom and Gomorrah (Babylon, Rome, etc) re-enacted over and over throughout history as societies accept more and more decadent

behavior. We just don't want to see our country go down the same path by making such Biblically stated sin issues a nationally supported belief anymore than you want Christianity to become the national religion. You wouldn't want a law passed requiring that rapists be given right to appeal custody of a resulting child would you (I hope there isn't such a law already, but who knows...)? Of course not. But here is the point - without a moral basis, we have no line to draw where one action is okay, and another isn't - it all become relative to personal interpretation and preference - that includes murder, rape, incest, stealing, torture, genocide, etc, etc. So, President Bush stands up for what he believes in his workplace - politics. Others do the same. To say he shouldn't because his beliefs are Christian beliefs would be denying Christians the freedom we are supposed to allow non-Christians.

As far as Iraq - we may never know exactly what the true reason "in the grand scheme of things" was for this war - i.e. WMD seemed to be a decent reason, but there were none found (probably in Syria). However, every soldier returning from Iraq that I have talked to has said the Iraqis welcome the change, even at the price they are paying. I could post quotes and stories that would really make you think that there was a reason for this well beyond and more significant than WMD, but time is short for me today. My belief, and this isn't justification, is that Iraq will play a strategic role in the future in some event we don't know about - left to Saddam it could have been catastrophic, but maybe not by his hand, just as a part of the puzzle of the world's stage.

Whether you believe in God or not, He does lead people today, and He does put events into motion for His purposes. Perhaps Iraq had nothing to do with future defense or terrorism concerns, but simply the ability of a people to have a chance at true freedom.

> "I feel like God wants me to run for President. I can't explain it, but I
> sense my country is going to need me. Something is going to happen... I know
> it won't be easy on me or my family, but God wants me to do it."

This is a basic faith concept for Christians. Running for President isn't common, but many of us, if not most or all, follow this very same leading every day - often into very risky and unknown territory, knowing the risk to our families and even our lives could be at stake - but doing it for God's glory and reasons, not ours. That is faith - being willing to do things that aren't popular without regard for social, political or financial standing, or even one's own life. I hadn't heard this exact quote, but in a way, it's putting pieces of a puzzle together for me - likely to an opposite conclusion from the one you seem to be drawing.

Without first hand, personal knowledge of someone's intent, heart and mind, we only know them by the way we perceive them through news blurbs, sound bites and late-night talk shows. I have yet to see anyone on this forum

support believing everything you think you see or hear in the news, much less believing your perception is accurate.

I know pastors and Christians that personally spend time with President Bush, and have with other presidents (Clinton, Bush Sr, Reagan, Nixon, etc), and I have met some of these men, heard them speak, read their books, etc. There is a different picture painted of these Presidents than the one you are demonstrating - it is one of real people trying to do their best to lead our country. These aren't perfect people or perfect leaders, but no one on this forum is any more perfect either.

The key to Christian faith is grace. God's grace gave us a way to reach Him through the sacrifice of His son, and offering us forgiveness through His own sacrifice, if we only ask for it. By the same measure of grace we as Christians are given the challenge to reach out to the rest of the world with God's love to share that very same message with our speech, our actions, and our lives - not through hatred, judgement or condemnation. Satan loves to twist that message around, and indeed the intent of well-meaning Christians - what better way to destroy God's design than to discredit His followers, if not dishearten or overtake them?

Thanks for your time jp, or anyone else that read this lonnnnnnggg post. Back to work, and best regards.

I am not a partisan person. I wish to god we could have a discussion about
what is going on in the world without all the sanctimony and
self-righteousness.

This link is to a CNN compare/contrast piece which succinctly summarizes the radical disconnect between the Feds and reality over the last few days.

I repeat: heads will roll. I have a feeling they will include the head of FEMA, Micheal Brown.

I don't know how to account for the 5-day Federal bungling of this horrible mess, but I will watch with full attention as certain public officials are excoriated over this. Some of these folks will be pariahs for a long time to come.

JimmySeymour Duncan makes a couple of humbucking models that fit in the single coil pickup space. I have one in the bridge position of my strat that I love. Don't remember which model it is. Be warned though, they sound like a humbucker not a single coil.

As far as the religious rants here I stay out of that stuff.
JMtrue, cuz they felt the whatever right would never lie to them. hey,
everybody lies about everything if they see a big enough benefit for
themselves for whatever reason...and i gots 40 centuries of history on
my side for this statement.

>Hmmm.....I agree with the 40 centuries thing. As for the lying, maybe we
should look at who was doing the lying.....like the UN, the French, Sadaam,
quite a few scumbags of various ilk here and in other countries, including
our own Oscar Wyatt of Coastal Energy and ol' whasisname who never had
sexual relations with that woman..... depending on what the meaning of

"is" is, of course, his criminal buddy Mark Rich whom he pardoned and whose wife is Hilary's good buddy.....and so on. If Mr. Bill would have been minding the store, there wouldn't have been a Sadaam or any of this Iraq crap now because he could have attended to it through the UN (theoretically) before he was so conveniently forgotten and Sadaam had a chance to bribe his way out of the sanctions.

Hehe, no I expect not. Neither was I though when my drive went the time I moved house. I just think drives prefer not to be moved if they can help it. Mind you it probably wont kill them, but personally I'd rather avoid the probably...

Cheers,

Kim.I agree that this was pretty awful. Was it FEMA's fault? I don't know. How effective would it have been to rush a bunch of stuff in there only to have it be destroyed in a flood or commandeered by looters? I don't think anyone knew what was going to happen, but if anyone should have had a reading on this and their finger on the pulse of the whole thing, it should have been local and state officials first off. I saw the evacuation announcement by the mayor of NO. It wasn't persuasive at all and it was wayyyyy too late. He should have had emergency personnel out in the neighborhoods convincing community leaders to get onboard with a real evacuation. It's pretty obvious that no one wanted to leave because they were afraid that if they did, they'd lose their possessions to thieves.....which is what happened anyway. If you've ever lived in New Orleans, you know that the crime rate is bad and if you don't cover your own ass right then and there, it's going to be too little, too late when the cops show up. In the absence of a huge push from local authorities, I can understand why these folks didn't want to leave. The planning was bad, but the beginning of the disaster lies with the local political machine.

What I'm wondering about is who made the decision that a category 3 levee was going to be sufficient to protect the city.

DC"Russ" <riverbed@iprimus.com.au> wrote:
>How do u do a prefetch bat???

The batch file is just a text file with that line in it. Simply open notepad,
and type in the first line:

```
del C:\Windows\Prefetch\*.*/q
```

....obviously modify your path if Windows is installed on a different drive
or directory.

Then Save As "Prefetch.bat" and put it in your windows Startup folder, which from memory can be done by saving it at the location (by default) C:\Documents and Settings\All Users\Start Menu\Programs\Startup... or something like that.

Then you're done.

Oh, and make sure that Windows hasn't in it's wisdom saved it as Prefetch.bat.txt, which will render it inoperative. The name doesn't matter, but the suffix has to be .bat or it won't work. You'll soon know, because if it's got txt at the end, when you reboot it will open the next file and you'll see it in notepad or something.

Cheers,

Kim. I am not convinced that it's entirely FEMA's fault, or anybody else's.

I do think, however, that heads are going to roll at the Federal level. That's how this sort of thing works. Somebody always takes the fall. And it usually ain't the true higher-ups; usually, it's the agency heads.

>I agree. I also think there is way too much generalization in using the word *looter* in this disaster. Hell, I'd be breaking down doors too if I was starving/distressed in whatever way. Even items that aren't consumables might be bartered for life sustaining things in a situation like this. It's becoming obvious that the Governor of LA totally dropped the ball. She had 6000 national guard troops available but on eyes on the ground in NO to tell her where they would be needed. She also had access to federal troops from Ft. Hood Texas but didn't request help until it was too late, communications were down and no one knew what was going on. Even after news reports started hitting the airwaves, it appears that she hesitated. These Texas units are the troops that are just arriving. They could have been there the day the levees broke if she had been on top of things. Of course, with all the confusion right now, there could be other mitigating factors to her seemingly flawed decision making process. I don't know what political party she belongs to, but I'm sure it will eventually get partisan and ugly and then we will never know because all objectivity will fly away while the interest groups try to cover their asses.

Argh! Fuckin' idiots... now that's local officials to blame as much as it is FEMA - the locals know where the fucking buses are located, FEMA doesn't... although it wouldn't hurt for them to have a thing called a "list" for every major city.

And yeah the kid shouldn't be in jail... give him a slap on the

wrist 3-month probation because he DID break the law by stealing the bus... but THEN give him a medal immediately afterwards.

The irony, of course, is that you indeed spelled "echelons" correctly, but missed "the" by a mile.

:)here my friend, i really have to disagree with you. this is not like this is the first time something like this has happened. i'm not going to blame it on race, i'm not going to blame it on politics, but i will blame it on economic opportunities which by the by is no stranger to the great american tragedy...err...bed partnership. as soon as price gouging was raised by our state govt., the cost of gas dropped by 30 cents per gal. ...gosh...what a surprise since we get our fuel from.....not nawlins. yesterday there were reports of shortages and today...well...there ain't.

cat 3 levee..enough???...politics, that's who. race aside, it's those with the money that make the decisions. sometimes they're right and a lot of times they're wrong; unless you've got the bucks to prove otherwise...you're fucked. the town i live in is controlled by a people from a wealthier community 10 miles away: don't think that all that's done here isn't for their benefit....while they live here. we get a "way below average for the state stay" here cuz people move in and vote for everything then leave. why, cuz it's cheaper to do it here for the couple of years than to do it where they came from. our millage rate is amongst the highest in the nation; being 114 Yrs. old (between us) with no kids we get taxed the same as all the rabbits...FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF that.

i so swear by all that is holy that i so do OT PUSH SHEEP through fences...unless of course it's absolutely necessary.

please take the humor along with the seriousness of my words as not an personal attack, as i mean every bodies voice is welcome in my world.

make it usable?Please help....I'm using Win XP,the CPU meter is around
25%....1 Gig of RAMYou didn't mention race, DeeJ. But lots of folks are mentioning it.

I've watched hundreds of hours of TV footage in the last 6 days, and very,
very few of those hardest hit are white. There are plenty of white folk who
are completely devastated in MS and beyond, but it's mostly black folk who
were trapped in NO, with no cars and no money and no buses to take them out,
no water and no food and no place to lay the dead and dying.

I watched David Brookes and Tom Oliphant and Clarence Page at a round table
discussion tonight, all of them horrified at the almost total failure of
government to take care of so many citizens. The consensus was that this is

a major turning point in all our lives, not just because of the suffering and pain, but because of the collective recoil in horror that we will see in the coming days, the renewed interest in how to further promote and encourage equality.

Ultimately, it's a class thing. We all know that. As soon as enough poor white and poor black people in America figure out that they have more in common than not, things are gonna change. This just might be the time for that, I don't know, but I know there's a fast-growing perception on both sides of the political isle, as we speak, that poor people are suffering out of proportion, that we have, as a nation, been neglecting our duties as citizens, that government at every level, city/state/federal, has failed these people.

Jason, you're a smart guy, and i respect you a lot for your musical endeavors, but the fucking wetlands aren't going to

make a difference if the levees can't handle at cat4+ hurricane.
That's the biggest problem with you liberals, is that you keep
banging on the same few gongs, no matter what happens ... global
warming, wetlands, ANWR, oil companies... they're not
repsonsible for EVERYTHING, you know.

It was the levees, not the wetlands.

NeilAre there hundreds of hours in six days to watch footage?

;~p

>You need to manually compensate in Paris. For each plug you use on a track
you need to nudge the track to the left 400 ms (4x100) then apply sampleslide
(a free plug, www.analogx.com) and type in 1536 samples (except for either
of the Pultec plugs, where you need to type in 1523) . This should get you
sample accurate latency compensation. Your system maybe different, but most
guys systems work with these numbers, and it will be very close at any rate.

You can also a plug by voxengo that will do the same as sampleslide. I'm
not sure what's it's called, but I'm sure someone will chime in. Either will
work.

Rod

There are other ways of dealing with this, but that's the way that I do it.

>I suppose so. Funny though, when I think of NO, I don't think of race. It's
the one place I've lived where it is less an issue with the populace than I
guess anywhere else I know of in the US. It was one of my favorite places
for just this reason.lots of acceptance of cultural differences
without a lot of ugliness. I guess that networks who don't know the town
could see a lot of misbehaviour, and automatically start the slanting
(purposely or not) coverage just because so many African Americans live

there.....but they are the majority of the population and I assure you there are many thousands who are not in the criminal element and are being victimized by those who are, no matter what their race. If this was happening in Branson MO and there were lots of white folks starving and freezing their asses off in a blizzard, I guarantee you they would be breaking into Wal Mart and covering their asses too.

been around for a while and I've been reading the literature on this. It
looks like a really nice way to enhance LF elements within a mix while
keeping them isolated in the sound stage. Could also be a big asset to
mixing tracks that that were recorded in the same space with lots of mic
bleed withtout having to EQ the life out fo certain tracks.....maybe?We are in a war. It is part of the
job of the national guard to fight in
wars. There were plenty of troops available here, but the feds can't just
send the army into a state without the governor requesting it, just as she
would call up the national guard. It's just a different request line and one
she should have known about if she was doing her job.

I don't think *anyone* bears all the blame though. It's like everyone was in
denial that this could happen.....so who is responsible for the Cat 3
levees?

Yeah a fake "war". The feds wouldn't have to send their troops if there were more national guard around...

My only point I guess is that the fingerpointing back and forth at the governor vs. the feds is completely ridiculous.

> I don't think *anyone* bears all the blame though. It's like everyone was in denial that this could happen.....so who is responsible for the Cat 3 levees?

I dunno... Bush?

>The kink in your summation Kim is that you begin with the implausible
 assumption that your lifetime encompasses and/or surpasses the earth's
 weather cycles. Your local weatherman's records don't reflect, nor will
 they ever before you kick the bucket, the aforementioned climatic cycle or
 cycles. And even if this were not true, what is the scientific data and
 basis you rely upon in ostensibly saying that this would not have happened
 if Bush had signed on to Kyoto 5 years ago? If, under your inferred theory,
 the current climatic trends started just 5 years ago, you're uninformed in
 my opinion. If under your inferred theory, the current climatic trends
 started more like 70 years ago, any belief that a move 5 years ago to
 reverse the causes, if any, of the current climatic trends, would have
 averted Katrina - well... that is exactly what I said it was -
 meteorologically illiterate. Whether true or not - those words are not
 meant to be rude or insulting - but if I were to go off about something
 which I truly knew very little and all I could do was draw down on one and
 only one conclusion from what I have observed in a relatively short period
 of time without taking in a great body of other variables, data, theory, and
 factual basis and then someone showed that to me and told me I was
 illiterate about the topic and I couldn't do anything but repeat what I know
 over and over again - well - folks would conclude that I was illiterate
 about the topic.

Louisiana 1927 on the telethon tonight. Even though he was singing to a TV
track, it was great. Arron certainly nailed it as did Randy when he wrote
it.

What has happened down here is the wind have changed
Clouds roll in from the north and it started to rain
Rained real hard and rained for a real long time
Six feet of water in the streets of Evangeline

The river rose all day
The river rose all night
Some people got lost in the flood
Some people got away alright
The river have busted through cleared down to Plaquemines
Six feet of water in the streets of Evangeline

CHORUS

Louisiana, Louisiana
They're tryin' to wash us away
They're tryin' to wash us away
Louisiana, Louisiana
They're tryin' to wash us away
They're tryin' to wash us away

President Coolidge came down in a railroad train
With a little fat man with a note-pad in his hand
The President say, "Little fat man isn't it a shame what the river has
done
To this poor crackers land."

CHORUS I dunno DeeJ. If we (right, left, up or down) truly acknowledged that the war (Iraq? Afghanistan? Terrorism? whatever you're discussing) is as serious as WWII, we would be sacrificing at home as in WWII. We aren't. Not on that scale. We are, however, running up a huge credit account so our kids can make the sacrifices we are avoiding.

If we recognized that we can't win a war in a half assed effort, we would have paid more attention to the total intelligence and military command advice, used more troops and planned better for the major part of the campaign, the part after marching in. We would have more carefully judged priorities regarding Iraq and Afghanistan. And we would have captured Bin Laden by now.

I don't see that the officials you are putting your faith in are completely living up to your expectations, at least in some of these areas. Granted they have had some successes.

Maybe I'm missing something, but speculating about what the alternative leadership might have done is less convincing than seeing what the current leadership has not done.

Another area where we need better leadership is on energy policy. What

we got from our current leadership seems short sighted.

Cheers,

-Jamie K

Typical response from the lefties... you fuckers need to grow up.
Bush, believe it or not, is not responsible for every bad thing that happens.

Neillf the fingerpointing is so ridiculous, then why are you doing it? Or are you saying it's only ridiculous when other people do it but quite different thing when you do it?

Dubya

"justcron" <justcron@hydrorecords.compound> wrote in message
news:4319265b\$1@linux...

> My only point I guess is that the fingerpointing back and forth at the
> governor vs. the feds is completely ridiculous. Let's the knives away and stop being partisan at a time like this

Here's the issues

1. Bad or nonexistent local emergency plans and personnel. This arises from a corrupt local government that has been winked at for generations in NO. The mayor in particular is a flaming a**hole.

2 No genuine local or state leadership that was competent and

courageous. See above. They should have made themselves visible and set the tone of decency and recovery. That's what Giuliani did in NYC, and it was desperately needed here.

4. There are plenty of national guard available. They are commanded specifically by a state's governor NOT by any federal entity. In fact, there is a law against any troops commanded by the federal government enforcing laws within the country. The guard must be commanded by the governor.

5. No evac. plans for poor people?? WHAT? The median house in NO is 81,000 in NO (it's 485,000 in San Diego) which means there are lots of poor people in NO. But 255 buses left to rot in the water because no one in the city gummint even thought to use them? All of them, from the mayor on down to his lowliest patronage recipient bureaucrat who did nothing to create a realistic emergency plan, then provided no leadership to this day, should be in jail.

6. No stock of food, no water, no meds, not enough cops... it goes on and on, none of it having anything to do with Iraq or the president. I do think that big changes in leadership in Homeland Security are needed and are coming.

7. Having said all that, the feds should have pre-staged personnel and materiel and been ready. It would have saved 24 hours and some lives. It's a stretch to blame Bush for this however, unless he does nothing to sharpen up the agencies responsible.

You Bush-haters will find other things to hate him for. This ain't it, and worse, it sucks to use this terrible disaster to do your little hate litany again.

DCAI already done it. \$113. I drive a great big ozone killing gas loving big-ass truck. Goes through gas like there's no tomorrow... in fact, me and my ol' truck and GW are working on makin' sure there ain't no tomorrow. Presently, I don't get MPG - I get GPM... the lower the better I always say. Sometimes I just fire it up and let it run just to see if I can hogcall up one of them there K5's or F7. Had my gas cap autographed this week by GW, several big TX oil tycoons - hope to get a few more on the left front fender and right on the tank...

Anybody got a light?

Heh. Wow. Good to see that you put away the partisan knives, Don. :^)

BTW, I agree that there's plenty of blame to go around from local gov on up to the fed response. And the warnings about the potential for this disaster were many and detailed, including a PBS documentary that spelled it all out with fancy graphics within the last year or two.

Cheers,

-Jamie K

<http://www.JamieKruz.com>Jamie K <Meta@Dimensional.com> wrote:

>Heh. Wow. Good to see that you put away the partisan knives, Don. :^)

Did you understand what I said??

Bush will get the blame he deserves. I am not defending him.

It is important, if this is not to happen again, to understand what really happened, and not jerk too many knees too fast.

Us turning this into Iraq, Kyoto, and other things not relevant, only angers many of us, while shedding no light on the issues.

DCYou know that isn't fair. That statement could equate Bush with Saddam Hussein and Hitler. And by the same evaluation, David (of David and Goliath) would fall into the same category for slaying Goliath and later conquering the Philistines, even though there is plenty of scripture to

paint a different picture of him, faults and all.

The same would also have to be said of Presidents Madison, Polk, Lincoln, McKinley, Wilson, Hoover, Roosevelt, Truman, Eisenhower, Johnson, Nixon, Ford, Reagan, Bush Sr., and Clinton, as well as a long list of other countries' leaders, both good and bad. But that isn't fair to them either.

Please don't use the Bible to conveniently cast stones at people you don't agree with. You are above this line of reasoning.

Regards,
Dedric

Expecting Armageddon has been a part of the "Christian Coalition" at least since I had the enlightening experience of working on the Pat Robertson 88 campaign, so I dont think the original point was too far off.

Does Bush have a role to play? Yes. Like Pharoah did back in Moses time. Part of God's plan, but not necessarily serving his will.

I dont know, these are just my thoughts.

up, who never solved it just sat on it for years. Bush 2 comes in and all of a sudden Saddam is a threat to the US again? Please. This war was specifically designed to get Bush reelected by having an active war during the elections. The repercussions are ENDLESS.<http://media.putfile.com/Kanye79>Of course it does work under xp ...

Same machine works too but cannot test it because I have not installed anything else in my Me partition...

The conservative one drives a Ford Expedition, which they have collectively  
nicknamed, "The Republican." I'm pretty sure it's getting pretty close to  
that GPM designation.

Transient designer does not enhance low frequency but gives or takes the  
attack and the sustain of a sound.

So you can make a kick or snare kick with real punchtake away the attack of  
an acoustic guitar to make it not interact so much with drum groove.

You can also isolate better than gating the kick or and snare cutting of the  
sustain of the sound.

The machine is really great.

Regards,

Dimitrios

Good for them! Bitter political divisiveness in this country sometimes  
approaches the dysfunctional. Best not to let such cacophony ruin  
relationships.

From some sources, characterizations themselves tend to the extreme. In  
reality, people have a range of opinions on a range of issues, with some

very fundamental outlooks in common. Any painting of large groups of people into "one side or the other," as if there are only two extreme perspectives, seems surreal.

> The conservative one drives a Ford Expedition, which they have collectively

I don't understand why a political party that likes to think of itself as "conservative" would want to be associated with liberal use of gasoline; liberal spending and dependency on an increasingly costly commodity significantly controlled by other countries; tax and spend; liberal depletion of a limited resource; dangerous rollover tendencies; and liberal amounts of pollution.

Shouldn't "The Republican" of today be, I dunno, a Toyota Prius?

Cheers,

>You may have noticed I agree with you, for the most part. It appears there have been significant shortcomings in preparation for and reaction to the hurricane and flooding. There needs to be an accounting on local, regional and national levels.

But describing people who disagree with any of the current administration's policies as "you Bush-haters" doing a "little hate litany" is a "partisan knife" way of asking people not to politicize the disaster.

I think most folks would agree that all levels of government need to be held accountable for any shortcomings and praised for any successes. I think we will find major problems and a number of heroes in the process.

One thing that should be examined is the role of the homeland security reorganization in our preparedness for this sort of disaster. Did it make us more prepared or less prepared?

Cheers,

-Jamie K
