tuff one, but Ok. What about the other questions? What about native Paris
plugins? This is probably where we'd start.

A little more input please.

>Not for me. There aren't enough/powerful enough DSP chips. The DP Pro algos are gonna suck them right up. There's just not enough horsepower to run enough of these per submix to make it worth further efforts. I would support bringing whatever Chuck had on the boards to some sort of conclusion, but PDC is the bottom line for me, and second would be being able to buss native FX to the Paris auxes. Get these two things accomplished and it's a HUGE deal.....for me at least.

James,

I'm with DeeJ. Auto delay comp and native effects on auxes would be easily worth the \$300 to me. Major issues at this point.

New effects are fun but there are so many third party jobs it's not that important to me. The Paris comp and NoLimit are just too good as they are. A side chain insert would be nice for gates and comps. =20 Didn't somebody say they were doing that already? Hmmm?
