>Hi DJ-

FWIW, I have done extensive loop work over the years, and
have never found anything like ACID. Versions 5 and 6 allow
you to categorize and store loops according to genre or
instrument or any category you choose. It's easier than ever.
Great program, well worth upgrading.

>Im not having any of those issues. I have heard of problems when using USB
to connect. ive used midi in/out to the houston from day 1 and never had a
problem.

I also paid \$1100 for it because if i didnt get it i would have died.
acid 6 is definately worth it.the loop manager alone is worth it. Idont know
if you use vegas at all,but the manager is common with that program as
well.sorting through 300 gigs of loops and hits without it is daunting.
v3 and 4 coexist on your dongle . no Dx in V.4. not sure if you can use DX
with a rewire program . the only one i would want is autotune, but i use
melodyne all the time anyway.

up because it has a sweet smell/taste. If they drink a bunch it kills them.
They have done studies on how many small children a year die from over dosing
on Aspartame.

They started using it in pop for diabetics. Some marketing genius thought
it was a good idea to market it to dieters. They now use it in gum, mints
and chocolate milk. The stuff gives me an instant sore throat and headache.
I've seen people have an allergic reaction to it.

rewired through Cubase syncs to the Paris C-16 and follows the Paris
timeline like a puppy dog.
Very cool I'm thinking that ACID 6.0 might be worth the price of admission
(\$199.00 upgrade)

I also have Vegas Pro here that I registered back in 2000 but that I haven't
used since I moved to Colorado. I called Sony about this and I can upgrade
to the latest/greatest DVD authoring version for \$249.00. I don't really
need a video editing rig right now but it's nice to know I can get into this
relatively inexpensively if need be.

>Hi DJ,

I do this all the time in Cubase sense I think VST 3.6.

Using the object selection tool select the part . Hold the ALT key and draw it across. If it is an Acidized file. then the tempo should already be read into the audio pool. I would double check cause some times it won't be. The play order track is another very cool method also but haven't gotten into all of that so far. If you want to go back and tweak tempo related info on individual parts then ACID is a little faster. Both Cubase and ACID aren't as intuitive as Ableton Live for this type of arrangement IMHO especially if you also want to use non-looped content and MIDI/VSTi.

chrisl@adkproaudio.com <http://news.harmony-central.com/Newsp/2006/Universal-Audio-Studio-On-Screen-Vol-1.html>Greetings :)

Just thought you might want to know about the
current UAD PARIS group buy

Special for the PARIS community going on now !
UAD-1 DSP cards

\$ 295 on project pak

\$ 595 on Flexi - Pak

\$ 999 on Ultra pak

\$ 895 on EXPERT Pak PCI-E \$ 750 voucher included

\$ 395 on EXPRESS Pak PCI-E \$ 100 voucher included

<http://www.uaudio.com/products/digital/expertpak/demo.html>

As always - trades are always welcome !

Morgan

Eastcoast Music Mall

800-901-2001

morganp@ntplx.netDave, it turned out to be the 50-ohm cables that were the problem... but one question:

I noticed that your diagram shows a word clock line into the
Paris COMPUTER and Nuendo COMPUTER in addition to the ones for
the MEC & RME convertors... how are you word-clocking the
computer itself?

Neil

But if you're starting to do radio spots, then the next thing
the ad agencies will want from you are tv spots (or at least
the audio portion for tv spots), and so at that point, you will
find you have to have that application, or...

:)Oh, OK, I thought meant you had a separate Worldclock card for
the PC ITSELF (i.e. separate from the convertors).

(Which actually, would not be a bad idea if there WAS such a
thing - since computers always want to try to default to 44.1,
even when you disable every onboard audio thingy).

Natural sweetener. Tastes great and less filling.

It's safe, natural and I use it all the time. Unfortunately I don't think you can get it in the US. Probably due to the makers of aspartame etc. keeping it out..

Cheers,

TC

Not quite as good as the tankersley video but hey, you gotta start somewher
right.maybe volume 2 will be a deeper set of lessons. I give it a 7 out of
10

 >Yes, Logic has to compete with Cubase 4 and Nuendo, as well as Pro Tools in
 terms of arrange window editing and overall workflow. The forementioned DAWs
 , including Sonar and Samplitude have very powerful, fast sample accurate
 midi and audio editing ..

I think the new version of Logic will ran right up there , even surpassing
 the current crop of DAWs. Especialy since they have Apogee Symphony stuff
 for low latency (albeit over-priced) mixer/audio bridge platform.

Yeah... I think the bitmap files are the graphics files PARIS needs to load. It might be that they're corrupted, but it also might be the memory you've allotted to PARIS . First try allocating more memory to PARIS (you probably know the routine: highlight the app's icon, File -> get info -> memory -> then type in a much more generous preferred and maximum memory size).

I would sort of think that you've tried that already, so if that doesn't work, you might want to try a reinstallation. You won't have to worry about PACE reauthorization if you reinstall; just make sure you've backed up your important settings, and if you have any Skunkworks plugs make sure you back up your Plugins folder within the Ensoniq folder (which in turn is in your Mac's System folder). I can't think of anything else right now, but it seems that I've seen this occasionally, and I'm trying to remember what caused, or seemed to cause, it. I'm working on it though...

~{8^>)

OK I think I've got it:

Maybe the problem was having more than one copy of the PARIS application. I think when this occurs sometimes a project will associate itself with the "wrong" copy of PARIS, and the other copy of PARIS will look for the bitmap files where it thinks they should be.

This happened to me when I backed up a hard drive that had PARIS installed on it. When I created a new project-- **even if I had created the project when running PARIS from the original hard drive**-- the project, when clicked later on, would cause the **new** copy (that is, the back-up copy) of the PARIS application to open, rather than the original copy of PARIS.

The solution may be to do the following:

1. Make two backups (two, just to be sure) of your Default Project and name them Defaultppj.bak1 and Defaultppj.bak2, or something like that. Leave them in the PARIS folder along with the PARIS app so you don't lose them.
2. Double-click your **original** copy of PARIS. Even if you haven't backed it up, might as well try. Let PARIS open without having double-clicked any projects. It should create a new Default Project.

If PARIS opens now, close PARIS and trash your **new** Default Project. Now rename one of your backed-up Default Projects to "Default Project". Double-click on PARIS, and it should open up and show your Default Project, the way you used to see things when PARIS opened.

OK, now close that project **without** closing PARIS (shift-apple-W). Now open the project you

wanted to open in the first place, from within PARIS (do this by hitting apple-O and, in the dialog box, navigating to the project you want to open-- don't double-click the project's icon in the Finder).

If none of that works (if PARIS won't open under any of those circumstances, including allocating more memory to PARIS) I'd go for a reinstall.

Anyone else have any suggestions? I'm not sure this will help but it's what comes to mind. I hope it helps at least a bit. Let me know how things turn out!

bcSheesh...

I go away for a bit and DJ ends up in the horsepital...

Found out today I do not have glaucoma, nor hypertension, but I am in the middle of a root canal and two crowns.

Last week I thought I had all of the above...

Life can change quickly huh?

Glad to hear you're OK.

>Well..I guess I'm just in the habit of waking up no matter what. I took one
of these about 9:00. Went to bed at 10:00. Crash got cold and jumped up on
the bed, yanked the pillow out from under my head (he likes to keep a pillow
in his mouth when he sleeps.sorta' like a giant pacifier) and laid down on
top of me to get warm at around 2:30 so I woke up. Got back to sleep around
3:00 after grabbing the *backup pillow* and negotiating a harmonious
arrangement of sorts with Crash and now I'm up and feeling hung over. So
much for *sleep aids* (can you say dope?). I would have gotten the same
amount of sleep without the drugs and I'd feel better than I do right now.

;o}

>Hey DeeJ,

Don't give up on the Ambien. I'm a lifelong bad sleeper working in a high stress, long hour career these days. The business travelers in my office schooled me about Ambien (they use it to reset their clocks as best they can when they're going NYC -> Chicago -> LA -> Munich -> Sydney in 10 days). Take a little less, take it earlier or later. It's the one thing I can use at 11.00 PM when I'm losing my mind to get eight solid hours when I know I need it.

TCB

P.S. Remember when people did drugs to have fun?

>You know, I didn't feel a thing during the root canal... It was later
when they put this string sutff inside the gums and fit the
temporaries that it started to hurt. Tomorrow I go in for the
permament crowns... Oh and cleaning... fun.

With my NY brim and my gold tooth displayed, nobody give me
trouble cuz they know I got it made...

I'm baddd I'm nationwide..

arrggghh

>Hey Zan,

Don't know much about the A7s (except that I'd like to check 'em out too),
but you should come visit. Bring a guitar. Do some pickin'... we could
walk over to Mike Auldrige's house and harass him a little.

If it lives up to the hype it will be a killer setup.

<http://www.wdbj7.com/Global/story.asp?S=5755280>

I want one already !

I got it to record using this freeware.

Guitartab.co.uk MP3 RECORDER.

<http://www.guitartab.co.uk/software.html>

Enjoy ;-)

>Well guys, I'm happy to report that a project my partner and I worked on is getting some significant spins in secondary Clear Channel markets.

We were hired to arrange and produce several songs by an artist named Joanna Mosca. After hearing our work, she also asked us to re-write the songs as well. We gave it the "old college try" and she was quite pleased with the end result...this was a number of months ago.

I received a call this past weekend and was given the news that one of the songs "Not Enough" was featured as AC pick of the month on FMQB.com and had also been added to a number of secondary market radio stations.

Paris Lives!!!!!!

Tyronecongrats.dont forget us when your rich and famous:-)

> TyroneLoaded it up, installed the drivers and it's working great except for the fact that monitor head #4 seems to be defective, showing a preponderance of green which does not respond to any adjustment. I'm going to contact tech support tomorrow and see if I can find a fix because I'd like to keep this card in my cubase DAW. It's IRQ situation isn't ideal since it's spanning 17 and 18 and two of my Pulsar cards are on those same IRQ's, but so far I'm not having any problems with this. I'm playing back 40 tracks in cubase Sx with no lockups. IRQ sharing makes me nervous though. This was an EBay purchase (\$135.00) so if I can't get a fix for head #3 I think I'll be returning it and looking around for another one because I like it. I hate to recommend anything like this because IRQ sharing is such a wild card, but having 4 x displays on 1 x AGP card seems stable so far and very responsive, IRQ sharing or not.

DeejCool Tyrone...Congratulations!

>TyroneHi all... I recently shit-canned my older Pent 4 and acquired a new one. Of
course I had to reinstall Paris. I searched all over the internet and can
not find the directions to setting the settings in the Paris.cfg file. I
thought it was on that parisfaqs website... I found it, but there is nothing
on that site except reference about the MidiPlayDisable=1

Can someone share with me the writeup on that please? My setup is working
ok... but I occasionally get that nasty Tmp que... something error... and I
think it's because I don't have the settings adjusted. Also, I got that
error right after tracking... and gues what, it's almost impossible to save
the project because as soon as you 'ok' the error, it pops back on... so you
lose you session... :(

Please help..I am on a Pent 4, 1GB DDR memory... current settings

CacheSize=10
OvwCacheSize=2048
IOSize=64
SubMixCacheSize=256

if this helps...
