You mentioned in a recent post that a certain Jim Williams had modded your LXP-1. I posted a followup note which perhaps you didn't see--I was wondering what kind of mod he did (and how much it cost), and what you liked about it. I use one in my live rig-it's old but still sounds better than a lot of the newer lexicons, IMO. And it's small, which counts for something too.

Thanks,
Dalenot that i'm aware of.
