this to you on the new Mac Pro...

So far transfers and everything is going OK

Unfortunately, I spent 3 hours today, much of it on the phone with Apple trying to make the ethernet work. We even erased the drive and reinstalled the OS...

Finally, the second support guy I spoke with suggested just trying a different ethernet cable. Why? I mean the cable works great with the iBook and the Mini!

Just try it...

OhhhKayyy

And damn, it lights right up... Works to perfection.

Sooo, yes an ethernet cable can work on every computer in the building and not pass muster with a new one. The gigabit ethernet was probably beyond

backwards, and it's the auxes that do it because they work differently. You
can, in a pinch, clear every and I mean every aux and get it to play into
version 2.11/2.2.. versions before that I cannot say will work as I've not
tried it.

>Assuming you have conduit:

Use your old cable to pull in the new cable, and add a nylon pull string when you do it for future expansion. I can't tell you how many times I've need that nylon pull when someone else ran cable and didn't have it. Also, in case you didn't know there is cable lube available if you're pulling a large bundle. Use shorter length multiple boxes rather than saving a few bucks on one big box and you can pull many at once :)

CAT5e 'might'. Depends on cable quality and length, I've seen it go both
ways. I still wouldn't do this route if you like data integrity.
Your physical limit is 310 ft of CAT6. I don't go past 300 ft, on principle
of hating failures/sketchy quality. We use Belden where I work, it seems to
be just fine. Avoid wierdo off brands, those I've had trouble with..
especially the jacket. Nothin' will piss you off like pulling a 250ft run
and finding out if kinked 'somewhere' in the middle of it and pinched the
wire into oblivion because of a shoddy jacket.
Also, be sure to wire it to spec, of the crosstalk will kill ya:

---=_linux488f9545--Do you think this might solve the 2 ADAT cards in one MEC glitch some
people
are having?

Don
