As most of the Irish terrorists have been. Now compare those
attacks to these in number and scope:

<http://www.thereligionofpeace.com/>

Make sure you check out the stats page.

> So yes, the 'threat of terror' is real, and I'm sure the next big attack

Ok, so what is your plan? Obviously, the other side has failed in your mind, so I would love to hear an alternative. Remember that americans and millions of others around the world expect a plan that reflects your view, stated above, that

So yes, the 'threat of terror' is real, and I'm sure the next big attack

imported them into a new project & summed it to your final 2-track mix from there. Again, not certain how close the comparison is, but tomorrow I'm going to run a totally ITB Native 2-buss mix, a stemmed Native mix, and a "summed in Paris" mix & post some clips so you guys can compare for yourselves.

NeilNeil,

Kind of a neophyte on all this stuff, but what about picking up a low end pc just for multiface control(or you may have one in your back room). Still just starting with the multiface thing myself, but I doubt it takes any power to run Totalmix, and that would get around the "configuration lost when power's off" if you run the multifaces standalone. The multifaces would be relegated to basically just A/D converters, but it sounds like that's what you want. Just use a KVM switch (cheap one) to get to the piece occasionally if there is issues.

Just a thought

Jeff
