>Turn on PNP OS in bios, also turn off USB, Parallel Port, Serial and anything
else you can till you get stable. Also make sure the cards come up on their
own IRQ. My MB manual was wrong on which slots share IRQs so all this time
mine was crashing due to IRQ conflicts. On boot up look at what IRQ's the
BIOS is putting them on. IRQ 3 works best for me. Then run the Schrezo
setup program to install the drivers, Install Paris and the FX subsystem
and you should be golden.

>Hi Parisians (I'm pleased that I'm not the only one left who's still got something
going for the kit ;-),

can anybody advise me on how to get Paris to interact with a DM-3200. The
idea is ultimately to replace the good old C-16s with the DM-3200 if this
makes sense?

Thanks in advanceGood tip!

rod

of any acoustic treatment, so each & every problem was very
apparent (such as the protruding concrete ceiling joist a few
feet behind the listening position reflecting all kinds of crap
down at you). His problem was probably worse than yours,
because the steel desktop isn't going to absorb ANYTHING,
whereas if your desktop is wood or particle board, etc., it's
going to absorb at least a little of what hits it.

So if it's the desk & only the desk, what about turning the
desktop into a bass trap... 703 on the underside of the
desktop, enclose that with some wood with an air gap inside -

you know the drill.

Bet no one's tried that before. Could work!

P.S. Timbuktu Pro adds a fair amount of strain on my Paris system so this running Timbuktu Pro on my Mac running Performer. I wired a pair of super a cool setup but still mostly academic since I have never preferred a mix I have done this way.

I think I can also use the MotorMix.

I installed a one-card w/MEC + 3.0 on XP Pro a couple of weeks ago. The MB is an ECS (garden variety cheapo on sale at Fry's) with a 2.66GHz P4 (non-Hyperthreading CPU) and a gig of Corsair memory.

First, verify that Hyperthreading is disabled in your BIOS (if you're using a CPU that supports it).

I had to install the drivers a couple of times as the EDS did not show up in Device Manager. Remove all PARIS drivers, shut down, remove the EDS, then

href=3D"news:44579552@linux">news:44579552@linux...</DIV>Hi =
Tom,

No=20
change to Paris is needed unless you add an additional interface.=20

Identical length cables are not necessary, or practical. You =
must=20

use high quality cable and connections though, this is very =
important.=20

I have our WC gen in with the console housing and my cable runs=20

(Canare LV61S with proper crimp connections) vary from 1' to the=20

longest run of about 25'... no problems.

As for the extra =
detail,=20
the difference will be slight but it will be
there. The most =

noticeable difference will be with a project from=20

scratch.

David.

Tom Bruhl wrote:

 >I like everything about it except that it is native and subject to all of
 the pitfalls of native systems when put under extreme duress. I built a PC
 over the Xmas holidays with an XP 4200 dualcore CPU thinking this would give
 me enough horsepower to negate buffer issues. Not a chance. Load this thing
 up with VSTi's and plugins at low-to moderate track counts and the buffers
 still need to be set higher than I'd like. My goal was to be able to keep
 latency at 1.5ms. I'll likely be relegating this DAW to other duties and
 building a dual/dualcore Opteron system if my needs begin to justify it.
 Check out the Opteron systems that are mentioned on the Nuendo forum. Those
 monsters are the minimum spec for achieving performance on par with a Paris
 system at 1.5ms latencies.

Ok, now we measure the speaker on the desk. Remember, there is rubber feet, then concrete, then a MoPad between the speaker and the desk top, AND we picked up the speaker at one point, completely decoupling it from the desk, with the same results.

This is not a subtle difference. You can clearly see the low-mid boost from the baffle-extension that the desk top represents. It is up to a 9-10db boost...

This is simply not acceptable for any critical mixing environment, and certainly explains some of the struggles I have been having with the mix on this project.

(The sub, btw, is nearly impossible to get flat because of all the chambers and loading that the desk introduces to the listening environment)

The bad news is that for people who still use large mixers, there is little you can do about this except EQ, which is far from a perfect solution. The good news is that for those who mix in the box, there is simply no need for all this furniture. All you need is a computer monitor(s) your C16's and a KB/Mouse between you and your monitor system. A minimalist solution, holding *only* those items and putting the racks somewhere else, will bring a dramatic improvement in monitoring accuracy and the quality/translate-ability of your mixes.

I am going to chat up some of the furniture people and see if such a thing could be designed. It should be cheap to do, and I will also look into having absorbtive materials on the bottom of the units as well.

This has been interesting! Anybody want to buy a KK Audio desk and 2 racks for cheap?
