Do you have the G4 or G5 optimized versions? Check out the links at the
bottom of this page:

<http://www.macintouch.com/firefox.html>

--
-Doug

<http://www.ParisFAQs.com>That's worth looking into.

Thanks!

I remembered another glitch this morning. One of my banking sites
that always worked fine with it stopped displaying the accounts.

They would load and then poof, disappear. Problem went away with the older version. I sent Mozilla a report.

>Rohde, couldn't get the dualcore Asus A8V-Deluxe system to work with Paris in WinXP. I couldn't try WinME, since E-MU 1820M don't have any Win98/MEdrivers. But for dualcore use with Cubase/Nuendo etc., I believe Epox 9NDA3+ is a better MB to use than Asus A8V-Deluxe. It seems to have a better chipset in the nForce Ultra contra VIA K8T800Pro and is using Award bios setup, so maybe Doug shall think it over what choice he want to do.

>Edna, I just reviewed your question and I see no one really answered the question.. what is it... First, you can do quite a few possible tricks (as some offered), but not all work perfect. If you had it once, you'll have it again. From my understanding of computers, programming and using Paris (which I have gotten the error)... I believe it basically something within the computer is either going too fast or hardware or visa-vera. I haven't seen what your settings are... but have you followed any guidelines to editing your paris.cfg file for the i/o? Another possibility is something *could* be conflicting and basically hanging when Paris is trying to process... if you don't use midi, there is a command line to add in the paris.cfg to turn that off. I don't use midi and make it a habit of putting that in the cfg. The bad thing about that error is that it is really hard to find the culprit. I would first make sure that your appropriate settings are in the paris.cfg, of course be sure your drives are set for DMA, and also be sure to turn off background services that hog the processor.. such as task scheduler, etc. Hope this helps and Good luck.... ~ Ed

Edna,
I really don't have any better answer for you. Control S is your friend =
though.

Maybe you found another Paris bug? Like grabbing too many tracks in the =
editor and changing their lengths together? That one gets me once in a =
while.

Lesson is Control S, Cut all tracks needing editing to the exact same =
length,
Control S, then do the edit, then control S.

I wish I could be of more help. Maybe you do have an issue with Paris =
and your computer.

My assertion failures usually have something related to .dll in their =
title.

Tom

Mike, what you should do, is actually us Mac OSX for some time before commenting on it. It is obvious to me, that you are repeating the same ignorant stuff some other ignorant PC user told you, or you read in a PC biased article.

What is unbelievable is the ignorance PC users have about the Mac, and the fact that they perpetuate the same ignorant bull shit. A lot of PC users talk about the Mac like they know what they're talking about, when in fact, they have no idea what they are talking about!

Go use a Mac G5 with OSX everyday for a year, then you'd have the right and knowledge to tell people that the Mac sucks, but, that isn't what you'd be saying. I don't think you would give up your XP box right away because there would be some proprietary software you wouldn't want to give up, although you could run XP on your Mac. What would happen is you would end up using your Mac for 90% of your computing, and you would start to think that XP is more of a PITA to use.

Why would you use a Mac over your PC??? Because it is hassle free computing, it's fast and it just works! It is a more pleasurable experience. You don't have to be a security administrator, worms and other viruses are not so much an issue. Pop ups, spy-ware, are not much of an issue either. You don't have to tweak and fuss with your computer to get it to work. PC guys are constantly trouble shooting and tweaking their computers. It is amazing to me that there is supposed to be standardized hardware for a PC, but a lot of it doesn't work with out trouble shooting, that is such a hassle.

The amount of buggy software sold retail for the PC amazes me. All the

B.S. PC users must put up without much complaint, simply amazes me. A lot of time is lost on trying to debug and get PCs to work. For the most part, the hassle factor doesn't exist with a Mac.

A Mac, works differently than a PC, once you understand how a Mac works, then you will understand why Mac users are somewhat fanatical. I'll put it this way, Mac users are fanatical about their Macs, because they've used PCs, and know a Mac is better. I personally use both platforms and have for years. I use XP and 2000 for what I have to, and I use a Mac for the other 80% of my computing. The Mac is simply less headaches. It is less time consuming, and time is money. PC users always talk about how much cheaper a PC is than a Mac because of the hardware cost. It's not cheaper when you figure in time, the time to build, administrate, trouble shoot, bug fix, down load drivers and patches. You guy's talk about band-aids and patches, Microsoft software has more holes in it than a sieve.

When PC users start Mac bashing, Mac users just shake their heads, we've heard the lies for so long we usually have to just turn and walk away. The guys that are brain washed are zealot PC users that repeat old bull shit about how Mac suck, and Macs can't do this and that. Some people have their heads so far up Bill Gates ass they can't see strait. Please don't repeat the same dumb stuff! Find out for your self, and I'm not talking about trying out a mac at a store or library, either.

Mike you say Mac OSX crashes, that is pure bullshit! You say, Macs are extremely slow compared to a PC, More dumb bullshit! Not even close to the truth! Your talking out your back side. Mike, honestly, you wouldn't know what the software on a Mac is worth, because you don't use a Mac. You say that OSX was a left turn, if Apple ever releases a version of OSX for PC, you will see major erosion in the Windoz market share by general computer users, because it's better than Windoz!

As for the four processor in the new G5s and software not being able to utilize the four processors, more ignorance. Mac OSX was written so that the processing load of a program is distributed across all four processors. It is not necessary to run software that is optimized for multi processors to take advantage of multi processors on a Mac. Although there are plenty of programs on the Mac platform that are optimized for multi processors. You really should read up on these things!

As for the Pizza box (Beach Ball) spinning, if you where a Mac user you would under stand what this means and what to do. First, on Windows it is the hour glass, same thing on a Mac only it is a spinning beach ball. On a windows machine you would get an error message saying " The program is not responding " and you would go through the dialog boxes and quit the program. On a Mac when you get a spinning beach ball you would do a force quit, to quit a program that was not responding. It's the same as on a PC, but you are going to

say the Mac sucks, when in fact you don't understand how it works. It doesn't suck, your just ignorant about it.

The Mac bashing gets old, especially when some one is speaking from a point of ignorance, but acts as if they are an expert on the subject. Some here have comparing Mac OS9 on an old machine to Windows XP on the latest machine is not a fair comparison, either.

If your a PC user, and you don't ever want to know about a Mac fine. You can stick your head in the sand or up Bill Gates ass or whatever, stay ignorant if you want, but don't bash the Mac until you have honestly used a new Mac with OSX for a year or more. Wait a month for MacWorld, new, faster cheaper, is just around the corner!

>Ah, yes, that time of year hath arrived once again. The Meredith Music Festival looms on the horizon like the coastline of a tropical beach after a storm has passed.

Unfortunately resident house band Comba La Revelacion seem to be missing from the bill this year, for the first year ever as far as I'm aware. Hmph.

My prime concern is, without them, how will I know when to start having fun???

;o)

But the tents are being dusted off, the beer is in the fridge, and the bands are tuning up. Weather is set to be mostly fine, the wallet is nicely topped

up...

....I have no idea who hardly any of the bands are, but I'll soon find out...

www.mmf.com.au

Summer, here we come...

Cheers,
Kim.Hi Mac user,

I want to admit first that I didn;t read your entire post because it's too long, and I don;t have that kind of time right now.

I make most of my living doing IT work, and I work with Mac's all the time. I stand by everything I wrote because it comes from first hand experience that I have found to be true.

Good luck,

Mike
