Yes!!!

JHRod,

That's sounds easy as pie man. I wish I new about it
seven years ago. I'll give it a whirl. Makes sense now that
I think about it. Never used Control L before.

Mike,
The beep sound is abrasive to me and certainly disconcerting
to classical and most acoustic players. The idea of getting four
tempo choices is very cool though.

If this isn't a boat load of work I'd say do it. I'

Try for a sample based click if possible.

Just get your sample of one click edited real tight, and put it on whatever
track you want at the very beggining of your default ppj. If you decide you
don't like the tempo you selected, just control z to undo the past multiple,
change the tempo on the project page and control L again. The number of copies
will still be there. I find 600 works for most songs if the time sig is 4/4.
sometimes I have

>Hi Jeremy,

The Nvidia video cards tend to work best on that Tyan board. The Tyan S2895 uses a Nvidia chipset for its main board anyways.

If you can still find a 7300GT I'd get that. If no then the 8600GT will be the next best.

Avoid the 8400 and 8500 since some of them use a form of shared memory that can cause trouble with some hardware and OS combos.

Check out models from Gigabyte, ASUS, EVGA and XFX. They tend to be built better than others.

i'll check those cards out... thanks.Anyone know how I can open the windows folder on a boot disk that I am not booted from?

I got a corrupted hal.dll and need to fix it somehow. 5 hours and I'm still nowhere. Oy!One more datum. When I try to open the windows folder, it tells me the disk is not formatted. All the other folders are openable.

menu with choices if there's problems?

If you have the original WinXP CD, you can also use the CD to install, where you get choices to just repair problems in an old installation.

> still nowhere. Oy!HI Bill,

Get your Windows XP install disk and let the machine boot to it like your doing a fresh install. When it gets to the point that it is looking for drives and previous windows installs and see if it detects a windows folder.

If not then shut down the machine and unplug any other hard drives in the system. Reboot the system and let it boot tot he windows disk.

When you see the option to Press R to enter recover console see if it lets you and finds a windows install on that drive to log into.

If not the then you will need to use some sort of drive recovery software or send it to a data recovery company.

If the drive is still spinning up and is being seen in the BIOS then it would seem like you MBR or partition table info got messed up some how.

Viruses, bad sectors etc can cause this.

If the data on the drive isn't critical then you should just go buy a new drive and reinstall windows.

You could try some tricks to to fix the MBR and partition info.
If there is mission critical info on the drive don't bother just send it to a recovery place.

If you go a buy a new drive you can always just use the the most recent backup you have of the OS drive.

You do have a recent backup of your OS drive don't you ? :)

If not then I would highly recommend getting in the habit!!

this cable..

I dunno.

But it is working and I only aged a year or so.

computers...

grrrrrrr

DCI love summer.

We shot a big summer festival last weekend (80k people). One of the acts was Steve Winwood who has been around approximately forever. He sounded great, and he and his band even dug out some of old Traffic stuff. Despite the heat (around 100f), it was a really fun shoot.

Just felt like sharing...

Cheers,

-Jamie

www.JamieKrutz.com When one pulls in the two mixdown tracks from a project, in PARIS 3.0, into

a new project (the two tracks hard left/right), then does some effects/editing on them, there are two options to finish: one would be to render the tracks with native inserts and then export them, or do another mixdown of them. Seems I recall someone saying that something was lost by just doing the rendering. But I'm wondering what happens to the tracks by doing a mixdown of a mixdown? Is the original panning affected? Or any other anomalies? At times I only need to burn one tune to a CD and would rather not mess with another application..

TIA,

EdnaAnybody have Appleworks for OSX?

James?

They discontinued it and I have a zillion files that use it...

TIA

DCNever mind..

I copied it from the Mini's HD and it opened right up...
