ense.

It seems to

me that the EMU system must have directly taken much of the best of what Paris is...then added all the integrated extras that Paris lacks.

only
recognize one audio driver, so you could do either/or, *if* the EMU and RME
drivers will play nice in the same rig. Also, the E-MU hardware has
absolutely no sync capabilities other than smpte or midi. Maybe not a big
deal to some, but a deal killer for me. I have heard reports that the ADAT
output of the E-MU is not *true* lightpipe and therefore doesn't always lock
up reliably when sending 8 channel digital data, so this might, or might not
work just as a standalone interface using only the software control panel to
route analog signals directly to the ADAT outs of the E-MU card and then
stream them to the ADAT input of the RME card running Cubase SX. I assuming
that this *might* be the case if the situation was reversed and the E-MU card
was being used by Sx and the Multiface was your standalone.....but I really
haven't fig

Anyone needing AES Passes for this - Please let me know.
I think we are trying to hook up a PARIS Dinner as well.
The Last one was really a great time .

Let me know
