the USB driver isn't an issue so this will allow it to move into the 64 bit software when it is released. The only bummer about it is that I can't get it to enable/disable the track monitoring buttons on the Cubase GUI. I'm looking into this though and maybe I've missed something. Other than having to mouse these, it's functionality with the Steiny products is very nice and they are cheap on EBay compared to the Mackie stuff.

I wish Paris would have had something like this.

DeejOrdered two of the SRC2496 units. Both died today, within about 15 minutes of each other.

Got' em from MF. They are still in the 45 day return period.

They serve a valid purpose around here so I'm going to just get these replaced, get an extra one and buy the extended MF warranty on these.

I'm morbidly fascinated by Behringer gear at this point.

;o)HI DJ,
You talking about the new one or the old?

The Mackie is still the best one overall. Outside of the Houston it is the best made and best supported of the bunch. The Mixed Logic is the only that is more well made but is kinda of a boat and is way over priced IMHO. Don't forget that the Mackie will work with allot of the other software unlike the Houston. The Mackie Control can even control the Total Mix.

Chris

That's what you say every time you buy Behringer.

-----=_NextPart_000_0009_01C794F3.A3340E50--Hey Chris,
Thank you very much for the reply. Man, I hadn't considered the driver and
plug in issue. This fella has a couple of P4 machines. I don't think his
projects will get over eight tracks, so we should be good to go.
Take care!
MR

(859) 635-5762HI Mike,

If he's gonna have so few tracks in a project then I'd say use the older
P4 machine with XP. He should be able to get allot more than eight
tracks with effects. I would looks at the M-Audio Delta series cards.
Reaper works really well on slower machines. If he has no outboard mixer
and need mic pres then I would get a TI chipset firewire card and pick
up one of the boxes from Presonus, Focusrite TC Electronic or M-Audio. I
would only get the smaller I/O units (8 channels or under) they will use
less resources.

```

Asus A8N-SLI SE Socket 939 Barebone Kit / All-In-1 Inkjet Printer / AMD Athlon X2 3800+ OEM / 250GB SATA HDD / 1GB DDR PC3200 / ATX Mid-Tower Case with Clear Side / SLI 600 Watt Power Supply

\$399 Tiger Direct

Seems like a ridiculously good deal. I have not been keeping up with processors, but I finally have to upgrade so I'm checking this out.

I'll be running Cubase4 and Samplitude on it.

Bill LIt's not latest/greatest PCIe board, but it's definitely upgradable. It's an AGP/PCI based mobo with an NForce4 chipset. The chipset will be a problem if you plan to use UAD-1 cards. The RAM is probably something you'll want to upgrade to a pair of 1GB sticks if you plan to use it for audio. You should be able to upgrade the CPU to an Opteron 185 (2.6GHz per core) and have a nice machine to run a native system, or pull the CPU and load an AMD 64 3800 single core CPU to run it with Paris. If you like to overclock, the 3800 x 2 has a pretty good track record for some major MHz boosting.
