is what President Bush meant in the State of the Union Address when he said:

living hell.....but.....if you

had 8 x PC's, running Win 9x, each with an Opcode Studio 64XTC, could timeline sync 8 x paris systems. That way you would have the global insert on each one for compression and EQ and then you could sum the main outputs of each to something like this:

http://www.manleylabs.com/containerpages/16_299.html

.....hehehe!!!!

Man.....it's time for me to stop drinkin coffee. I'm thinking that it's getting to be time to replace my trusty old Fostex

T-20s w/ new and better sounding headphones. The great thing about the T-20s is that they seem to be almost indestructable. I've had to replace the occasional cable and other bits and pieces, but I've never blown a pair, and God knows, I've tried!

So what do you guys use? I need phones that can get LOUD without crapping out. I run them w/ a Bryston 3B into custom made breakout
