It doesn't.. it doesn't correspond at ALL, and that's the whole point of it, in fact... stretch tuning PURPOSELY throws stuff out of perfect intonation. There's something about it that sounds more pleasing to our ears, and in that regard one could probably liken it to the whole tube/x-former/analog tape thing... certain types of distortion, while "imperfect", sound more pleasing to our ears.

You know what stretch tuning is right? I mean, you know what I'm referring to when I say that, yes? If you're not sure, google it or let me know & I'll elaborate - it's the polar opposite of what Buzzy & fan-fretting are trying to accomplish, yet it's been the standard for skilled piano tuners forever.
