---=_linux446f69c8--Yep.....my Untramatch unit just went belly up. Unbelievable. I can now say that *every* piece of Behringer gear that I have ever owned (except for one-an older Ultramatch SRC 2000).....has either pissed me off or endangered my studio in some way.

headphone amp caught on fire
line mixer was so abominably awful that I *gave* it away because I couldn't sell it with a clear conscience.
Little midi mixer thingie with moving faders fried a USB port on my mobo when it's USB port went south
Ultramatch Pro SRC 2496 died

I'm getting to the point where I'm glad the FCC is keeping some of their products out of this country. To say they are substandard is a gross understatement.

;oPhehehe!!!! I think the kludgegods may have claimed my Behringer SRC 2496. A small price to pay to appease them. Everything else is rockin along except for an old Flying Cow AD/DA that I hadn't used in years and never was that reliable in the first place. I'm going to pull it offline as it really wasn't going to be doing much duty anyway and I was considering patching in a different device anyway.

>Just reading their toilet paper manuals showed me what crap they were. The manuals reflect that the authors did not even want to think the equipment at all. They SUCK period. I hope to never own a piece of their gear, though the arrogant folk in rec.pro.audio.live or whatever it's called love the 32 channel digital behringer, but I wouldn't put much stock in it.

I'm wondering what you guys think of this unit? I'm thinking about grabbing one for the TC reverbs.

Thanks

JamesYou'll be interested to know that the Chinese prices will increase over the short/long terms due to the fact that approximately 5 or 6 months ago, the Chinese gov't decided to revalue their currency to a pool of international currency values whereas prior to that, their value was directly tied to our own currency causing a stable, easily controlled profit margin. Now, in order for them to maintain predictable profitable prices and avoid potential losses caused by currency value differentials between their pool and the USD, they'll have to run a safety margin upmark on US exports. If you shop at Target or some of the other importers of Chinese products, you've already seen a bump. That will continue to rise over the short term.

>Yeah.....she's sittin here pickin her guitar and shaking her head. I'm still
getting some wierdness from the RME digital I/O when crosspatching from
Digipatch Unit 3 to MEC 3 on Digipatch Unit 1. This has been a very
interesting experience, but I may scale it back a bit as to the number of
devices I'm patching through this thing. For whatever reason, certain
devices like it fine, others are not quite so happy with it. Not everything
I've got going on here is critical to the way I work and I have been
successful in a few areas that really increased the functionality of the
digital patching matrix. I'm going to call a truce with a couple of unhappy
devices and move on.

can. i'll let you know what I find. I did not try both the "intaffinity"
switch and assigning Paris to CPU 2. I did try both CPU 1 and CPU 2 with
the filter that the microsoft tools program provided. Neither CPU with the
filter installed allowed Paris to start. I'll keep trying.

I sure hope they are good sounding verbs. Their blowing new ones out for
\$150.00 now. For the money, and being 24bit, with SP/DIF, I think it might
work great with Paris for a quick dial up reverb. There is a new TC M350
coming out. I think the difference is the M350 comes with software to use
it like a VST or DX plugin.

http://www.nytimes.com/2006/05/16/business/worldbusiness/16cheat.html?_r=2&oref=slogin&oref=slogin Just an FYI because I know that a bunch of you guys are going to run out and try what I have been describing. The "gotcha" that I have discovered is that the RME HDSP inputs will not digitally lock to an incoming signal that is crosspatched from a different Digipatch unit. It works normally on signals from devices on the same Digipatch patch unit though. It's strange because the RME HDSP output works fine sending signals crosspatched to devices on other Digipatch units.

Anyway, this situation is rocking along nicely now. I'm gonna have to get a 4th EDS card and another ADAT module to finish this beast.

Stay tuned.

;o)

>genel have had some interesting results by applying affinity parameters using task manager. I was able to get Paris to work for quite some time while making a lot of changes using the C16 and the mouse. Usually that would lock things up. Also, I was able to get Waves to work in Samplitude using this tool. Unfortunately, I seem to have to use task manager to set affinity each time I open the programs. I will investigate the info given on the sybase web site about using imagecfg.exe.

HOWEVER - I attempted to set affinity using the microsoft tool kit called intfltr.exe on the Paris MIDI driver that was listed using this program. This is the same program I unsuccessfully used to try to set affinity on the Scherzo driver. Since that time, I have not been able to open Paris at all. It's beginning to look like I will have to re-install Paris to get things working again.

heat.html?_r=2&oref=slogin&oref=sloginWe need to get Paris happening with the Yamaha 01V as a control surface using midi. The Steinberg Midex is, from what I've heard, quite a performer as far as getting low latency midi happening. If the faders aren't responsive enough, I wonder if Analox X would consider updating the midi driver. We need to be able to switch between submixes with this control surface and to possible daisy chain two of them together to have a 32 channel automated fader box.

This might be the ticket to using Paris with dual core CPU's since the C-16 doesn't work with them.This is a multi-part message in MIME format.

Content-Transfer-Encoding: quoted-printable

There are three reasons why I jump through all of these hoops when I'm = mixing

1. To bypass the restricted Paris submix architecture of paris for = hardware processors
2. To use VST plugins on Paris inserts and auxes
3. To enable me to keep using the Paris mix bus (which is by far the = most important of all, to me)

Sooo....to that end, I though I'd try to simplify a few things for those = of you who might want to try this:

Using Cubase SX as a standalone processor for applying VST plugins to =

Paris tracks (requires powerful computer)

Make sure both systems are using a common clock.

In the Control Panel of your native audio interface, set the latency to = 1.5ms.

Physically patch the Paris ADAT I/O to the ADAT I/O of the audio device = you are using with Cubase SX. Check the control panel of you audio = hardware and make sure the I/O are sync'ed up.

Set up a matrix in the Paris patchbay where you are sending and = returning whatever tracks you want to process via ADAT on the insert = module. Do it for tracks on all Paris submixes if you have multiple MECS = using multiple ADAT modules and have enough corresponding ADAT I/O on = your native system.. This is how you bypass the restricted Paris submix = architecture.

Set the insert on the Paris mixer channel you want to process to = external.

In Cubase, create a corresponding number of audio tracks.

In Cubase > VST connections>create mono input and output busses that = correspond to the ADAT I/O of your audio interface that is connected to = the Paris ADAT I/O

Insert the VST processor you want to use on the audio track in Cubase

Click on the little "speaker" icon on the Cubase audio channel so you = are monitoring with effects.

Hit the Play button on Paris. The audio will be processed though the = plugins on the individual tracks in Cubase Sx and returned to Paris.=20

The plugin delay compensation works very well at 1.5ms under this = scenario, allowing you to play back tracks in Paris that aren't being = processed in Cubase with tracks that are.

Watch your channel levels in Paris. In an insert send/return scenario, a = hot track being sent from Paris can clip the bejeezus out of a UAD-1 = plugin in Cubase SX so be careful. This takes some finesse.

There is another scenario which I use in which I import all of the = tracks into Cubase SX and then just return them to Paris while being = processed on both systems. The digital matrix for individual tracks only = requires the patching of ADAT outs on the native system to ADAT ins on = Paris and then Paris is set to "Live Mix" mode.

Due to the necessity of rendering, then batch processing the audio files = to .wav over a network, then importing them to a cubase mix template, = this takes more time to set up, but once you get your head around it, = I'd say it adds about 15 to 30 minutes *per song* to your session time = but if you enjoy the Cubase editing capabilities, and the Paris mix bus = this is definitely the way to go.

Now.....how about getting those cool VST FX (can you say convolution = reverbs?) and VST delays on some Paris auxes????.....well.....here's = how:

Mono and stereo VST effects in Cubase FX on Paris auxes

1. Physically patch a pair the I/O of the audio interface you are using = with Cubase to a pair of Paris I/O
2. Route these Paris I/O to an aux in the Paris patchbay and assign this = aux to a record enabled track in Paris.
3. In Cubase > VST connections>make sure the I/O of the card being used = with Cubase are set up as mono or stereo input and outputs
4. In Cubase > VST connections>Group/FX>Add/FX and choose the effect you = want on that FX channel

(at this point, if you want the effect centerpanned, you can just use it = as a send effect on a Cubase mono or stereo audio track)

5. In Cubase > VST connections>Group/FX>Add/Group
6. In the Cubase project window go to the Group Channel, rename it with = the name of the Paris aux is using and assign it to the mono or = stereo bus that is connected to the Paris aux.
6. In the Cubase project window go to the FX channel and insert the = effect you chose in Add/FX on this channel and then choose the same = output bus for this channel that you chose for the Group Channel so that = this effect goes to the Paris aux
7. On the mono or stereo track in Cubase insert this effect as a send = effect.
8. Make sure the channel faders for the audio channel, the FX channel = and the Group channel are set top unity.

9. Start playback and make the necessary adjustments in the send levels = on the Cubase audio channel and the Paris aux channel.

In order use a hardware processor across submixes in Paris.....

1. Physically patch a pair the I/O of the hardware interface with the = I/O of an audio interface you are using with Cubase.

2. In Cubase > VST connections> create an external effect and assign the = I/O of the audio device that you are using with Cubase SX

3. In Cubase > VST connections>Group/FX>Add/FX and choose the external = effect that you created.

4. If you want centerpanned mono or stereo, at this point you can just = use this as a send effect on a mono or stereo audio track or for = panned auxes in Paris, you can follow steps 5 through 9 above.

Cheers,

Deej

-----=_NextPart_000_01CE_01C67C76.940CF4A0--Hi All,
 I noticed that the myparispro site is no more and was wondering where I could
 purchase the pitchshifter plugin.
 I also was wondering if anyone was use bfd drum samples with paris and how
 you may be doing this. I had spoken with Rim at drumagog about the new drumagogbfd
 that will be coming out soon and it will not work in Paris. Just wondering
 if the best solution would be to add a second computer. What program would
 I need to go with on the second comp to enable me to be able to use drumagogbfd.

I'm guessing that if I had the UAD efx,that they would be used in the same
 way? Are the UAD plugs worth the investment of a seperate comp?

Thanks

David Plt sound pretty good. I use it live and the delays are great. I have used
 it occasionally on a mix and it's pretty nice.

It's quick and easy to dial in...spdif in/out is pretty handy too.

David

>JamesI have one of these in the studio right now. One thing that I'm experiencing is some very noticable phazing when using the analog I/O on a Paris aux. I don't get this phazing when using my Sony V77 or Lexicon LXP-1. I checked the manual and the A/D conversion specs at 44.1 are .50ms, the D/A is 1.33 ms. Add this to the 1.5ms round trip latency of the Paris AD/DA and you've got 3.3ms. Now I would think that the spec on the other devices here is similar, but maybe not. I haven't done any measurements yet to see the actual latency. You wouldn't think that 3.3 ms latency would be such a factor, but if this thing is on spec, it certainly is a factor.

DJIt appears that these are really just abbreviated ATA 33 cables. I've got a bunch of these here. So I could just get a chainsaw and cut the width down to the same number of rows of conductors of an EDS cable, I assume.....but, the IDE cables have two connectors, on one end. Can I just use the length of cable between any two of the connectors or do I need to use the long cable run between the mobo conductor and the first drive connector. If I can use the stretch of cable between any two connectors, then I'm assuming it's OK to trim the remaining cable that is trailing after the conductor.....maybe using a shaped charge to do this?so you is my monkey...boy???

DC,
I get mine in NYC at:
<http://www.tapes.com/>

I'm a day away via usps.
Tom

"DC" <dc@spammersinhell.com> wrote in message news:446e3a1f@linux...

Hi All,

Hey, the supplier I use for Mitsui (MAM-A) gold CDR's has decided on
a new 300-piece minimum.

Yikes!

I just don't need 300 at a time. Their price is decent (0.84 USD)
but I would take too long to use them here.

Do you know of anyone who sells 100 at a time?

Anyone want to split an order?

DC

I choose Polesoft Lockspam to fight spam, and you?

The Midex series was discontinued about 6 months ago. They way to many
drive and reliability issues with em. Oh and they didnt' sell at all.
To cheap looking and light on the features for the high price they sold at.
The O1v has very basic control surface functionality. YOu ever notice
why everyone emulates the Mackie Control cuz it is the best one....)

I really wish everyone would can this old midi shit all together and
adopt OSC.

I choose Polesoft Lockspam to fight spam, and you?
http://www.polesoft.com/refer.htmlUse a dremel, a DVM to check for shorts/correct wiring and you
can do this.

Expect to glue one side of each end, as you'll be cutting the clasp off of one side. Or, you could just hit a electronics parts website and order the right ends and cable :)

Me? I hacked up some IDE's I've been using for years, but it takes a few tools and a steady hand/eye coordination.

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html>I've always made my own. Aaron is right though; once you tool the width

down, you lose a clasp on one end. I unclasp everything first, get

out the scissors and make the correct cable length, cut off the peirced ends, narrow the conductors down to the number required, etc. Once that prep is done, align the cut cable ends over the knives and use the clasp to repunch the new cable ends. Use some blocking to do this.... its easy. Once punched down, one end of the cnnector body is already clasped... just super glue the other end suspending the connector vertically - cut end down. Dry - test - go.

DC,

I hope their prices are right for you.
They seemed quite reasonable across the=20
board to me when I was checking years ago.

They'll make up for damaged stock if that happens
to you too. Keep them on their toes.

<http://www.analogx.com/contents/download/audio/pmidi.htm>

It's the Paris. It's got MIDI. Nuff' said. Automation of ALL of the controls on the MiniMixer display, from the fader, to the EQ, effects, panning, phase, etc, etc, etc! Now supports MIDI TRANSMISSION of fader movements/mutes/solos, as well as imbedded support for the Yamaha Promix/01 mixer for, you guessed it, flying faders! Unlock the potential of the Paris today, with ParisMIDI! You must have a MIDI interface on the same system as the Paris in order to use this program. Make sure to read the enclosed documentation to find out how to configure and run the program properly!

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html>One of the nice things about vst is that there's a lot of free
plugins out there for it. I came across these the other day...
go check 'em out, there's quite a few.

<http://www.gvst.co.uk/effects.htm>

They're very simple, for the most part, but the ones I've tried
so far have turned out to be really clean & don't seem to be
very cpu-intensive at all.

Enjoy!

Neillf just for a single track, seems like you could use another duplicate track
with eq set and then automate faders for the 2 tracks - sort of a crossfade
between tracks..

E

 However, MS better get their poop in a group on the current Virus/Spyware
 issue or this kind of fundamental shift will bring death and destruction to
 server stored profiles. Virtual BSOD coming soon to a theatre near you, LOL.

>or more db of gain change to get them up to decent levels. Any ideas?

>Thanks.-MichaelWow, what a story. They are a great band and deserver much more
success than they have gotten. I will say that their stuff was more

accessible early in their career. They got manhandled pretty badly by the Christian music scene early on and stopped writing obviously devotional stuff, and got less accessible.

Yet, anyone who has heard the live track of "Over My Head" knows that Doug has some, well.. issues to deal with.

Sure, the church people treated him pretty shabbily over the years for being gay, from what I have heard, and that needs to be objected to and loudly, but still they have written pretty obtuse stuff in recent years, despite the obvious great talent displayed.

Personally, I'd like to see them stop smoking pot and being pissed off and write more "Out of the Silent Planet" type stuff, but they won't. Today, we have lots of heavy bands who are Christians and are doing some great work, but it took a lot to get here. King's X started out when really hard stuff was simply not something you could play for church. That has changed. I hope they can still make more great music. Killer band!

How's that for politically correct? lol

Anyway, I'm thinking about reamping it or maybe Sans-amp-ing it,

but here's my question: If I pick up a Bass Sansamp, I know the input isn't designed for line-level stuff, so if I run the signal out of a line-level out on my convertors, then through a mic pre that also has a line-level input and also an output level control (of which I have a few), can I just feed a very low level out of the preamp into the Sansamp input, or will I run into impedance issues with this method?

Reamping's no problem - I can easily rig that up, so if this other option doesn't work, I can always fall back on that, but for another choice, would a Sansamp box work in this instance?

Problem is "Farty distortion", BTW. It may take a re-tracking with a better input chain than the bass player's Carvin head line-out jack, but I want to at least investigate other options first. Worst bass sound I ever permitted to go to track... how's that for an achievement? lol Totally my fault, though - despite the band insisting they liked it, I should have at least taken a direct feed though a preamp or direct box on another channel, as well.

Neill used to be such a huge fan - I still love some of the Sam Taylor produced albums. However, this rant really doesn't surprise me at all. In a way, it's really a shame, because the dudes are talented - BUT their songwriting has stunk for a long time now. They really did have an identity crisis breakdown, and well... I just don't want to listen to that from anybody.

However, I think, regardless of any of the other issues he brings up, they never really had a killer single that would get them serious radio play... if you want to sell a few million copies per album, rather than barely a million copies over a lifetime (which still doesn't suck), you really do have to have

that aspect going for you.

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html>You are correct Neil - it is not a 'rant'. I think. Haha. Also - I should clarify that within their songwriting, I think the lyrics are the weak link. They need to paint a better picture - and a much much cooler one at that. Doug needs to get off his low-esteem trip and rock some friggin' balls - like his band sounds like live.

>It's Love was a big hit.. although, I always thought it should've been bigger... Dogman was great. Last few albums I tried to get into though, I just couldn't dig. I think Tape Head was the last one I picked up after a few failed vibe attempts.

Still, real shame for them to come to the place they have. I would like to see them try Europe or Japan before cashing in the chips. Perhaps Germany would better suit their sound? Hopefully they each were wise with any money and won't be asking about do you want fries with that, but I've known some fantastic musicians that starve while complete idiots dance around to a seq track and rake it in.

Zero justice in that man, I feel what Doug is saying there.

>would better suit their sound?

Hah! but they always get lost there!

heh hehHey Lamont,

I realized my post probably may not have made sense at the start - I was referring to how it is interesting that we've come to the same result with completely different perspectives and experiences, and therein perhaps lies the answer to why DAWs seem different.

When it all comes down, every app or mixing medium requires a slightly different approach, but more often that is about workflow - not summing or other dsp anomalies (which is one thing developers of digital audio try to avoid). As engineers and producers we all look at problems and solutions differently (which is what makes this a fun and creative business), but with digital audio, the results can easily be the same when those differences are fully understood. That sometimes requires throwing out tradition or learned approach and figuring out what actually makes up the result we are trying to achieve. That isn't always as elusive as it once seemed.

To finally summarize a bit of my conclusion on our running conversation on this, I've been comparing DAWs to find the differences for quite a few years now. The key isn't trying to push any digital DAW, but finding the tools that equate to what needs to be achieved. I can create the same result in Sequoia and Nuendo. Only workflow changes.

As we all know, once you find a way to create a sound, it is no longer a mystery relegated to a particular piece of gear. Regardless of what platform a mix is done in, it ends up on CD with the same bit depth, sample rate, stereo field, etc. The human techniques of mixing are really what it make the most difference. Certainly different tools (Eqs, comps, limiters, pres, mics, consoles, etc) all sound different, and will be better choices for different styles or different needs. But, there isn't a "magic bullet" - just understanding.

Regards,
Dedric

comp, renewing the antivirus subscription every year. My subscription ran
out yesterday and upon trying to renew it, I was informed it was no longer
supported, and I had to upgrade to whatever 2006. Since I've read some of
you are down on Norton, I thought I'd ask for opinions on what to switch
to. Sooooo....what do you guys like?

I don't use the norton firewall. I use the free Zone Alarm one.
I kind of like the system tune up thing that Norton did. I don't think I've
had a crash...ever, on this comp.
RodHi Rod,

Check out www.bitdefender.com and a program named Spyware Doctor. That might
be all you need. The combo of the two has kept my kids PC free of spyware,
malware, and viruses for about a year now. It was a DISASTER before that.

Neil,

Sounds like the part already sounds blatty. You may have to rerecord as you suggested. I have great results using a combination of a fat but clean DI track with Amplitube along side it.
Tom

"Neil" <OIUOIU@OIU.com> wrote in message news:44729718\$1@linux...

I have a bass track that this band I'm recording is happy with the sound of, but I personally think sucks... OK, maybe I should say it a different way: "They like it, but I think they might like it even better if I could improve upon it :D
How's that for politically correct? lol

Anyway, I'm thinking about reamping it or maybe Sans-amp-ing it, but here's my question: If I pick up a Bass Sansamp, I know the input isn't designed for line-level stuff, so if I run the signal out of a line-level out on my convertors, then through a mic pre that also has a line-level input and also an output=20 level control (of which I have a few), can I just feed a very low level out of the preamp into the Sansamp input, or will I run into impedance issues with this method?

Reamping's no problem - I can easily rig that up, so if this other option doesn't work, I can always fall back on that, but for another choice, would a Sansamp box work in this instance?

Problem is "Farty distortion", BTW. It may take a re-tracking with a better input chain than the bass player's Carvin head line-out jack, but I want to at least investigate other options first. Worst bass sound I ever permitted to go to track... how's that for an achievement? lol Totally my fault, though - despite the band insisting they liked it, I should have at least taken a direct feed though a preamp or direct box on another channel, as well.

Thats "Chuckie Baby" to you. Yep, gong show fame.

geneYeow!

[http://www.youtube.com/watch?v=njDtlNkjk0&search=dragon force](http://www.youtube.com/watch?v=njDtlNkjk0&search=dragon+force)Best way to deal with viruses and network attacks? Install Ubuntu on it. BY FAR the best option, though you will have to jump through some hoops for some kinds of media playback.

If you insist on paying for an inferior Microsoft operating sytem, as an alternative to Norton I suggest AntiVir or Clamwin. AntiVir is free as in beer, Clamwin free as in beer and free as in speech (it's GPL'd). The downside is that Clamwin doesn't include a real time scanner--you have to tell it to scan something. I think the XP firewall is pretty decent, I use it on my machines but I also have my own firewall built into my home router. I think Zonealarm mostly just scares people.

But try Ubuntu, after a little bit of kicking around you'll be thrilled you did.

a few years ago, and all the bass player told me was how much he spent on
it.

On the other hand, I just went to practice with a band I am doing a session
for, and they had a Randall with a 15, I almost liked it better than my SVT,
much more clear "note" and still plenty of low end.

Dang! Amazing playing really. Hope you can see it sometime.

DCThat proves any tool can be worth it.

The SansAmp doesn't suck for tone.. it just needs a little EQ :)

If it takes you more than 5 minutes to be impressed and 2 weeks to fall in love I'll be suprised. This is as near perfect a bass pre as I could have ever dreamed. See for me it's all about the sounds of the 70's and 80's with prog rock and rock. This bass just has that sound for me. Totally and 100%. Of the hundreds of conc

with no problems. =
Multiface v2 doesn't have ADAT input so avoid that one.

I do need the MIDI, ADAT and MTC or ADAT sync anyway.
I didn't want to add a MIDI card to my Paris comp if it isn't =
necessary.
I am using the GenX WC now too.

If you decide on an HDSP 9632 and will need to use it as a standalone =
(no
